3 P. M. EXHAUSTION?

Suspect your Eyes!

Your eyes are connected directly with your brain. When they don't see well and easily, when they tire and jitter, their fatigue is communicated to your whole nervous system.

That accounts for much of the nervous exhaustion that shortens working hours and prevents evening recreation.

Why put up with it? Almost all visual defects can be corrected. If you have the slightest suspicion of your eyes, a professional examination and expert eye care are called for at once.
