What Helps Agriculture Helps All of Us!

John Holmes, President Swift & Company

This page is printed here as a service to all farmers and ranchers of America. Together with you producers, we have a big job to do in the business of feeding this nation of ours well.

A short time ago I was talking about improved methods with a farmer. He said, "The way I look at it is this — what helps agriculture helps all of us."

That is it in a nutshell. What helps agriculture does help all of us—producer, meat packer and processor, retailer and consumer. So the purpose of this page is to tell in a few words and many pictures about all manner of things that do help agriculture. We hope that by searching out news items, telling of new trends, big or little, reviewing findings of agricultural experiment stations, by recounting the experiences of successful individuals, and in many other ways, we can render a worthwhile service to all who produce our nation's food.

The Editor will be F. M. Simpson, who is already well known to many of you as Manager of our Agricultural Research Department. He will welcome your suggestions and original ideas. Mr. Simpson is the Editor—but it is your page. Please help us make it a useful one.

A Merry Christmas to you all!

John Holmes, President, Swift & Company

PROFITABLE CATTLE FEEDING

Under present conditions the Illinois Agricultural College recommends feeding medium feeders or better to a good finish but not to choice. Their suggestions:

- 1. Keep cattle largely on pasture and roughage until they have most of their growth. 2. Feed common two-year-old feeders minimum amount of corn to medium finish, producing commercial or B-grade beef. 3. Feed medium two-year-old feeders minimum of corn to a medium finish, producing commercial or B beef, or short-feed them a full feed of corn to a good finish, producing good or A-grade beef. 4. Short-feed good and choice two-year-old feeders a full feed of corn plus suitable supplement to produce good or A-grade beef. 5. For details, write College of Agriculture, Urbana, Ill., for Bulletin No. 501.

Nutrition Is Our Business—and Yours!

"Right eating adds life to your years, and years to your life."

same with human beings. There is a great deal of research being conducted at the present time in our universities to find out more about the relationship between diet and human health, and Swift & Company gives many grants to aid this kind of research.

Not so many years ago a lot of people said meat was hard to digest; that children should never be given pork, etc. Nutritionists have proved that pork is one of the most digestible of all meats, rich in Vitamin B1. These and many other basic truths about meats and other foods have been established by the work of nutritionists. You can readily see why such discoveries help the sale of meat and of livestock. That is why we say—"Nutrition is our business—and yours."

Martha Logan's BEEF POT ROAST

Beef chuck, rump or round, provides the roast, accompanied by browned onions and carrots. Roll the beef well in flour, then brown in hot fat in a heavy kettle. Add water, cover tightly and cook slowly for two hours, or until tender. Add peeled potatoes, onions and carrots, and cook for one hour.

Does lots of wool on the face and legs of a sheep and a wrinkled skin help to make a more valuable fleece? No, says the U. S. D. A. Sheep with wool over their eyes produce fleeces of lighter weight and less value than open-faced sheep.

Ex-Farm Boy Knocks 'Em Dead

BUY MORE WAR BONDS—HOLD WHAT YOU HAVE.

Maybe you've heard the epic story of "Zeke" Givan. "Zeke" was a farm boy from Dearborn County, Indiana—until he enlisted in the Marines. His first big show was at Kwajalein. The Japs started to rush him, and "Zeke" started to shoot. When the shooting stopped, those present were "Zeke," one red-hot Browning Automatic Rifle, and 35 dead Japs. "Zeke" says modestly, "I did nothing except my duty." Later he was wounded at Saipan. We'll say that like many thousands of other farm boys, in and out of the Service, he is doing his duty extra special well.

SOFT CORN FATTENS LIVESTOCK

by I. B. JOHNSON, Director Agricultural Experiment Station, South Dakota State College

If you are caught with "soft" corn, due to a sudden freeze before your corn matures—remember you still have feed. It makes a good fattening feed for steers, calves, feeder pigs, and lambs.

These were the conclusions of the South Dakota Experiment Station, based upon the first year's feeding trials, wherein cattle, hogs and lambs fed soft corn were compared with others fed sound corn of No. 3 market grade. The soft corn was bought at 50 cents a hundredweight—the No. 3 corn at 75 cents a bushel.

No preparation was given to this soft corn. It was stored in uncovered piles on the ground, and fed field run—soft, moldy, rotten, husk-covered ears just as they came.

Yearling steers were fed for 150 days, calves 195 days, pigs from 87 to 118 days, lambs 90 days. In ALL cases the return was greater from the lots receiving the soft corn, due to the price at which the corn was purchased.

The gains of both cattle and pigs on soft corn, compared to those on hard corn, were reduced after the beginning of warmer weather in April. It is advisable to feed your soft corn early.

In figures, the soft corn had the following approximate values when compared with the price of No. 3 ear corn in the rations fed:

- 85% when fed to yearling steers
- 80% when fed to steer calves
- 76% when fed to feeder pigs
- 71% when fed to feeder lambs
