

Film Shop Hollywood

By PATRICIA CLARY

HOLLYWOOD (UP)—Dorothy Lamour made her movie debut with a tiger and an ape in "The Jungle Princess," but Frances Ramsden, who considers herself in somewhat the same class, is making her bow with a lion and Harold Lloyd.

"But I," said Miss Ramsden with dignity, "am not risking pneumonia, or flu, by jumping around a jungle in a sarong. I jump around in New York City in a handsome cab and my lion is tame—it says here."

Frances' lion is Jackie, now making his uncinematic appearance in "The Sin of Harold Diddlebock." He has operated in many a jungle, film variety, but he likes city streets, handsome cabs and herds of people better.

Jackie is happiest, according to his trainer, Mel Koontz, when there are lots of actors around to scratch his back. He sides up and leans against them, and they scratch—or else!

"Miss Lamour eventually got used to her tiger—I hear—and rode him bareback, and I'm finally getting used to having 400 pounds of lion at my heels," Miss Ramsden said. "I haven't ridden him bareback yet. I don't have to ride him to fall off. I did that while I was posing for a still picture on his back, and I'm still sore."

Jackie has never appeared with

another animal, but he has worked with practically everybody else in the industry, including Johnny Weismuller and Mae West. That again puts Miss Ramsden in pretty good company.

Preston Sturges, who wrote and is producing and directing "The Sin of Harold Diddlebock," not only wrote the lion into the script, but also personally discovered Miss Ramsden.

The tall, willowy and winsome former photographer's model first met Sturges two years ago. He suggested a screen test. She laughed and never showed up. Six months ago, when he was plotting "Diddlebock," Sturges saw her again and this time she took his offer seriously.

"I didn't do my test with the lion," she laughed, "but with Mr. Lloyd, who is making his first movie in seven years. So now I'm working with the lion."

"At least, when I get kissed, it's by Lloyd and not by the lion."

Cites Coal Reserves
NORMAN, Okla. (UP)—Oklahoma still has coal reserves of 54,787,512,000 tons, it was reported in a recent issue of "The Hopper," monthly publication of the Oklahoma Geological Survey, with headquarters at the University of Oklahoma.

Between 600 and 700 tons of coal mined in eastern Oklahoma is being coked daily in the by-product ovens of a steel company in Houston, Tex.

Rare Courses Are Attraction for GI's

KINGSVILLE, Tex. (UP)—Returning Texas war veterans are flocking to the little Texas College of Arts and Industries at Kingsville to enroll for two courses offered by no other college in the area.

The courses are in natural gas engineering and in the fine art of growing citrus fruits and vegetables.

Officials said 240 veterans enrolled in the tiny school with a banana, palm and orange-tree covered campus as the courses started. Some 600 more were expected as soon as housing facilities could be prepared.

The gas engineering course is regarded as outstanding in its field in the United States. Graduates are assured jobs at high pay. Some are hired by oil companies even before they finish the four and one-half year course. A. and I. is located in a section of Texas which also boasts the largest natural gas deposits ever discovered in the world.

Students taking the course in citriculture and vegetable production get practical experience the year-round on a 460-acre college tract in the semitropical Lower Rio Grande Valley of Texas. Graduates, say college officials, can find jobs easily on the large fruit and vegetable farms of the Tip of Texas—or can start a farm of their own.

NOTES ON NEBRASKA FARMING

Nebraska 4-Hers Offered Chance of Lifetime

Some Nebraska 4-H boy or girl may become the leading man or lady in a new 4-H movie being produced in 1946. Or perhaps some Nebraska 4-H club leader can provide the story which will be the basis of this movie.

Nebraska 4-H club members and leaders have an equal opportunity with leaders and members from other states to win in the nationwide search for a story and cast for the movie to be produced by the National 4-H Club News. The talent hunt is going on in two divisions, one for adult or junior leaders; and the other for 4-H club members.

The Sears Roebuck foundation is providing prizes in each division, ranging from free trips to the 25th anniversary National 4-H Club Congress in December 1946 to \$25 United States saving bonds.

Pruning Demonstration in Nemaha County

Every year new problems confront the fruit grower and once in a while new spray materials come to the front, says John Steele, Nemaha county agricultural agent. This year, for example, DDT will be available for spraying.

E. H. Hoppert, extension horticulturalist from the University of Nebraska, will be in Peru at the L. R. Gates fruit farm the afternoon of March 7 to demonstrate some of the new techniques in fruit growing. He will answer questions about the place of the new DDT spray in the spray program for apples, peaches, grapes and other fruits. Fertilizing of fruit trees will come in for consideration also, especially dealing

with the use of the ammonium nitrates.

The new insecticide DDT and its application to rid the household of many insect pests is to be the subject of the home extension project clubs leader's training meetings in March. The project lesson, prepared by Mabel Dorems, specialist in nutrition with the agricultural extension service, and Dr. M. H. Muma, extension entomologist at the University of Nebraska, will show how the insecticide can be used in the home to safeguard the family against diseases borne by insects.

Griddle Test

How to know when the griddle is just hot enough for the batter is a problem in the making of pancakes and waffles, especially for the inexperienced cook. If the griddle is too hot, batter may scorch, and if too cool, may stick.

Home economists of the United States Department of Agriculture test with a drop of water. When water dropped on the griddle bounces in a lively manner, the

metal is just the right heat for the batter. The griddle is too cool if the water sizzles and evaporates slowly; too hot if the drop seems to explode when it touches the metal. This test may be used on waffle irons that do not have automatic indicators.

Another test for the waffle iron is made with a piece of paper. When the iron is just hot enough, paper placed between the grids browns in about half a minute. If the paper takes more than a half minute to brown, the iron is too

cool if it scorches immediately, too hot.

Cedar and Tama Oats

A. H. DeLong, Otoe county agricultural agent, points out that in experiment station tests covering the past eight years, Cedar and Tama oats have yielded seven bushels more per acre than Oteo and 16 bushels more than Kherston. The increase was much greater in years of severe rust infestation.

Cedar and Tama are resistant

to most oat rusts and smuts. This is one important reason why they yield more, stand up better and produce heavier grain.

High test weight means greater value for feed and industrial use. In 1945 Cedar and Tama grown in farm test plots weighed seven pounds more per bushel than the older rust susceptible varieties.

Rust resistant Cedar and Tama reduce the risk of low yields of light grain and make oat production more profitable, DeLong concludes.
