ropolis.

Mr. O'Dwyer was questioned concerning some of his appointments but maintained that he did not know the facts about their connection with some prominent gamblers and big-shot operators. When asked, in respect to one appointment, whether he could not have found someone who was not related to a reputed gangster, Mr. O'Dwyer replied: "There are things that you have to do politically if you want to get cooperation."

This is a revealing attitude but it reflects the widely current philosophy of some of our leading politicians. By "cooperation" they have in mind the backing of various elements and factions that mean votes at election time.

Mr. O'Dwyer gave expression to another common philosophy of the day when he was asked if he could explain the influence of Frank Costello, admittedly a tycoon of the gambling business. Senator Tobey, of New Hampshire, talking about, Costello said:

"It's a funny thing what magnetism the man has. You look him over here and he looks like minus zero. What, in your opinion, is his attraction for these peo-

The former mayor knew the answer. He replied: "Well, whether he's a businessman or a banker or a gangster, his pocketbook is always attractive to people." These replies by one of the highest officials of the republic reveal the callous attitude of the professional politician, ready to get "cooperation" to retain office. and the unfortunate attitude of many Americans who are ready to accept anybody and anything if there is money tied to the package. Until the two attitudes fail to reflect the current philosophy of office-holders and people, there will not be much chance for better government and there is no use to expect it.

AUGH AT PERON'S CLAPM

L The announcement of a revolutionary process for the release of vast amounts of atomic energy, made in Argentina as a marvelous accomplishment of native scientists, is branded as "fantastic" by competent scientists throughout the world.

Without going into the details, the scientists say that, except through the use of uranium, it is absolutely impossible to produce on the earth the temperature caused by an explosion of an atomic bomb. This runs into millions of degrees and even the explosion of a bomb produces a high temperature for a fraction of a millionth of a second. To accomplish the same results by chemical processes, such as burning fuel or in an electric furnace, would melt every known material on the

There is not much use for anybody to be worried about the Argentine claim that the heat energy of the sun has been duplicated. The solar process involves a temperature of 20,000,000 degrees centigrade and the radiation into space every second of a quantity of heat equivalent to that of fifteen quadrillion tons of coal.

DEFENDS GOOD POLITICIANS

While the revelations and disclosures of the Kefauver Crime Investigating Committee have been sensational, one must always remember that the exceptional represents the news.

Senator Estes Kefauver, who leads the committee, recently stated that, in his travels about the country, in the committee's work, he was convinced that the majority of political leaders, Democratic and Republican, were not involved in crooked deals or in league with the underworld.
