Homemakers Club Enjoys Tour Of Lincoln Places

This is the peak of the apple season and homemakers can find many good buys.

Ethel Diedrichsen, extension food and nutrition specialist at the University of Nebraska, suggests that apples be chosen for specific purposes. For apples to eat raw, choose those pleasing in appearance, texture, and flavor. Apples for baking purposes should be firm and should hold their shape well. Stewing apples should be those that are tart and will cook in a short time.

In choosing any kind of apples, choose only those which are firm ripe or ripe! They would be free from bruises and blemishes of the variety.

Mellow apples should be stored in the refrigerator while firm apples may be stored at room temperature or slightly cooler. Apples absorb odors as well as give off an odor which may be absorbed. They should be kept away from potatoes or onions and from dairy products which may absorb odors.

QUESTION: Should a fur coat be insured all by itself or is it all right to include it with other items of personal property?

ANSWER: It depends on many things—the value of the coat, value of other property you want to insure and the hazards you want protection from. Better see a good insurance agent and explain your exact circumstances. Many new policies give all around protection for all your personal possessions.

★ If you'll address your own insurance questions to this office, we'll try to give you the correct answers and there will be no charge or obligation of any kind.
