How to Live And Breathe in Your New Basic

A story on girdles hit this desk this week, and as I STRETCHED and RUBBERED through it, I've decided to SUPPORT this fool thing and share it (the copy) not the girle, I BARELY fit in it now) with all you so round, so firm, so fully packed gals, such as I.

When picking out a new style for the holiday season ahead, don't make a selection from looks alone. Take your new garment into the fitting room and get acquainted.

Don't expect a new garment to move up smoothly over your figure. One garment may give just the right control — another, similar one, may deceive you by not giving enough. Make sure your basic is on straight — that the center panel is really in the center. Unless it's on right, you'll be uncomfortable, and you won't get the maximum support.

When hose supporters are fastened, stand up straight and take a good look in the mirror to see where and how much support your getting. If you plan to wear the new basic with a slim skirt, and you have a full figure, don't expect a lightweight elastic pull-on to do an effective control job.

Be sure to sit down in your new girle to see if you are just as comfortable sitting as standing. Often a girle that seems long enough and large enough while standing, rides up and cuts when you're seated.

Don't choose a girle that is too tight. It's bound to become one of your worst enemies in a few short hours.

So if you are planning to buy a new girle for the new holiday dress, do take it into a fitting room, slip it on with the help of a clerk (na or the kids will help you at home) and see that you are comfortable, and have a smooth fit. You'll don your clothes with the assurance you've chosen a foundation that does the most for your figure.

"SOUND" WEAPONS OF ELECTRONIC AGE—Resembling jeweled daggers, swords and clubs, these tiny weapons, most of them less than an inch long, are being welded by scientists in a war to reduce the bulk and increase the efficiency of radio and television equipment. Worth their weight in gold, they're fragments of pure silicon as found in the earth. Officials of DuPont, one of the processors of the crystallized mineral, foresee widespread usage of it in the manufacture of tiny transistors, which replace some types of bulky vacuum tubes.

Suggests Care While Using Clothes Dryers

Save fuel and fabric when using automatic clothes dryers, by careful timing to prevent over-drying. Clara Leopold, extension clothing specialist at the University of Nebraska, reminds us. Over-drying — that is, leaving clothes in the dryer after all moisture is removed—adds to the cost of operation of the appliance and may be hard on fabrics. Yet it is a common mistake of new owners of dryers. The specialist found that table linens which were left too long in the dryer come out so limp that it is difficult to restore their crispness without moisten-

ing them all over again before ironing. The housewife should consult the timing guide which came with her dryer. As she becomes more familiar with her dryer, she can work out more exact timing for the various pieces in her laundry. Shirts, sheets and pillowcases, table linens, or other items to be ironed should come out of the dryer while still slightly damp. Bath towels, chenille spreads, bath mats, cotton rugs and corduroys can be fully dried in the dryer and will come out fluffy and ready for use.

It is economical to take a load from the dryer as soon as it is dry, the specialist tells us. This is especially so when more than

one load of clothes is to be washed and dried. The dryer should be ready to receive the new load as soon as the washer has finished with it.
