AMMO-PHOS

FERTILIZER

is water soluble...

Experiments prove that crops take up more phosphate from water soluble Ammo-Phos fertilizer than from common mixed fertilizer.

MAKE THIS EASY TEST

Place one-half teaspoonful of the fertilizer you are now using in a glass of water. Then place a similar quantity of Ammo-Phos in another glass of water. Stir both mixtures for several minutes. Notice how water soluble Ammo-Phos goes into solution while the mixed fertilizer collects at the bottom of the glass. Even if left for several days, the ordinary mixed fertilizer will not dissolve completely.

With Ammo-Phos your crop gets what you put in the ground.
