Soil Bank Eligibility Is Explained

LINCOLN — All farmers who have an "old farm" wheat acreage allotment for 1958 and who normally grow winter wheat are eligible to sign a winter wheat acreage reserve agreement under the 1958 soil bank program.

Producers on farms which received a wheat acreage allotment for the first time in 1958 are not eligible to participate in the wheat acreage reserve program, states Wilfred R. Nelson, chairman of the Nebraska Agricultural Stabilization and Conservation committee.

The sign up period for the 1958 crop winter wheat acreage reserve agreements ends Oct. 4. Under the 1958 program farmers will agree not only to reduce their wheat acreage below the allotment, but also to limit their harvest of soil bank base crops (generally all crops produced for harvest) to permitted acreage. This limit will be determined, in general, by subtracting the number of acres in the reserve from the total soil bank base.

Individual farm per-acre rates of payment will be established on the basis of the county average rate, but varying among farms primarily according to the relative productivity of the land in reserve.
