ATOMIC TEST BUILDING — This frameless metal building which faced up to the atomic blast in 1955 at Yucca Flat, Nevada, is being donated to the College of Agriculture at the University of Nebraska by the Behlen Manufacturing Company of Columbus. George Peterson, member of the Department of Agricultural Engineering at the College, reads the plaque stating this building was located 15,000 feet from a nuclear explosion. — (College of Agriculture Photo)

U of N Gets Yucca Flat Test Bldg.

LINCOLN—A metal building which faced up to the atomic blast in the famous civil defense test of May 1955 at Yucca Flat, Nevada, is now on the

College of Agriculture campus at the University of Nebraska.

The frameless metal building, which was one of 2 of similar design used in the test, is a gift to the College from the producer.

The building has been erected on a site near the widely-known tractor testing track at the northeast corner of the campus. It will serve for general utility and equipment storage, accord-

ing to W. V. Lambert, dean of the college.

It was one of two identical steel buildings which were furnished by the Behlens to the Atomic Energy Commission-Federal Civil Defense joint test, "Operation Cue" in 1955.

Early attention centered on the teammate to this building which was located only 6,800 feet from the blast. It suffered a severe jolt but remained intact and usable. Later it was returned to Nebraska and erected at the Nebraska State Fair where 75,000 persons saw it. Today it is on view to tourists and visitors on Highway 30 at Columbus.

The "other" building, which is now at the College, was located 15,000 feet from the atomic blast. The idea was to bracket the "survival range" to give scientists an indication of the blast force at different distances.

This second building at 15,000 feet was virtually undamaged. Its door being knocked ajar and a few window panes being broken. Other metal buildings alongside suffered more damage but were admittedly of lighter construction.

College engineers have modified the building to include a double door for large equipment. Otherwise it is the same building which stood against the atomic test of 1955 which still is one of the largest blasts unleashed on the Nevada desert.

The building is constructed of
