

Ralston Defeats Plattsmouth, 11-1

Plattsmouth found the going tough in its Platte Valley league baseball opener here Sunday and lost, 11-1, to Ralston. The city team got only seven hits and scored its lone run in the 7th on a single by Bob Beuthe, an infield out and Sgt. Ed Blair's single.

Ralston gave its pitcher, Bridenbaugh, three runs in the second on three singles and a walk, sandwiched in with a sacrifice and an infield out.

The visitors added one in the fourth, three in the sixth and two each in the seventh and ninth. In all they got 13 hits. Bridenbaugh struck out 15.

Plattsmouth batters, walked just one and was in charge throughout. Fr. Victor Stachowiak started for Plattsmouth, gave up six hits and four runs in five innings. Sgt. Blair finished out, struck out six and walked five.

Next Sunday, Plattsmouth is at Millard for a 2:30 game.

15 Million Walleye Eggs For Nebraska

NORTH PLATTE — Walleye eggs by the millions. That is the encouraging report from the No. Platte fish hatchery, where the Game Commission seeding crew completed this spring's egg-stripping operations.

H. C. "Hube" Howard, hatchery superintendent, said approximately 15 million eggs have been stripped and fertilized, then placed in a battery of hatching jars. The total represents an all-time high for eggs taken at No. Platte.

Howard attributes this year's unprecedented success to "learning the best method of taking the eggs, when to take them, and most important, where to take them." Most "ripe" females and males were netted in shallow waters between 8 p. m. and 4 a. m.

Just how many eggs will hatch is unknown. Superintendent Howard said a 60 to 80 per cent hatch is considered good. Most loss, he added, occurs before the eggs have reached the "eye stage."

Generally the eggs hatch in 14 to 15 days, depending on the temperature is about 52 degrees Fahrenheit. A day or two after hatching, the walleye fry are planted in hatchery rearing ponds, where they remain for 6 weeks or so, or until they are 2 to 3 inches in size.

While in the rearing ponds, the young walleye feed on plankton—microscopic plant and animal life—produced by fertilization of the ponds.

When fingerling size, the walleyes are stocked in Platte and Republican River reservoirs and some are released in other smaller but suitable waters in the state.

Walleye may be taken the year-round in Nebraska. Bag limit is six, possession limit is 12.

CAMP PENDLETON, Calif. — Marine Pvt. Donald G. Cox, son of Mr. and Mrs. Wilby D. Cox of South Bend, Nebr., is scheduled to finish four weeks of individual combat training May 5 at the Marine Corps Base, Camp Pendleton, Calif. The course includes the latest infantry tactics, first aid, demolitions, field fortifications and advanced schooling on weapons. Trainees learn that all Marines are basically infantrymen, whether they serve as cooks, typists, truck drivers, or with aviation units.

Nov. 1-5 Deer Season set For Nebraska This Year

A November 1 to 5 rifle season for deer in most of Nebraska was authorized by the Nebraska Game Commissioners at their Friday meeting in Lincoln.

Hunting will be permitted in the Pine Ridge, Plains, Upper Platte, Northern Sandhills, Southern Sandhills, Southwest, Central and Upper Missouri Units.

Nebraska archers were granted a Sept. 13 to Dec. 31 season, an extension of almost two months over 1937. Again there is no limit on number of permits.

Lack of deprecation complaints, reduced population, and the desire to stock surplus animals in the sandhills prompted the Game Commission to close the state to antelope hunting in 1938.

The 10,000 rifle permits for deer represent a decline from the 1937 total. Last year's hunts, as planned, reduced the excess-

Pfc. Robert Little Here On Furlough

Pfc. Robert Little, son of Mr. and Mrs. Seybert Little of this city, is home for a furlough from Ft. Devens, Mass., enjoying a visit with the parents and the many friends in the old home.

Bob has had the opportunity of seeing a large section of the country since joining the armed forces. He was at Fort Ord, Calif., where he received his basic training was then stationed at Fort Rucker, Ala., where he was given a course of specialized training and later sent to Fort Devens, so he had the opportunity of seeing a great deal of the country and west, east, south and northeast.

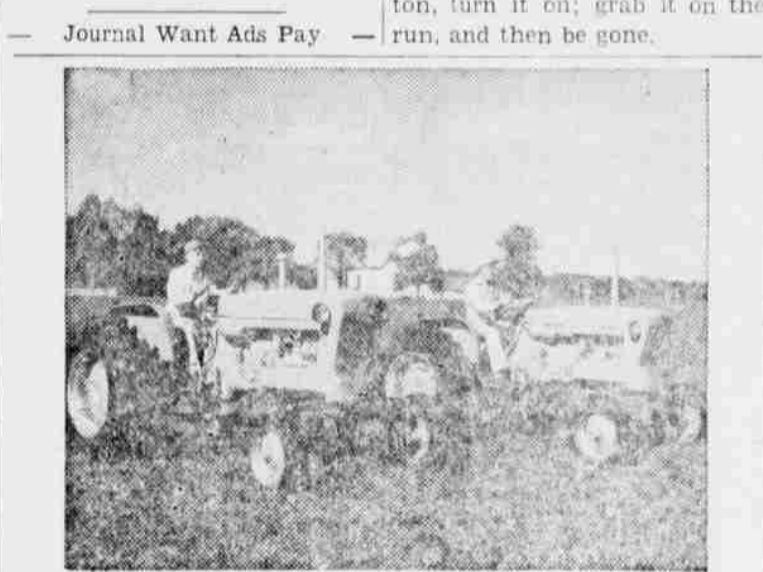

Car Burns On Highway 75 Near This City

Friday night the fire department was called to the south part of the city where an auto was reported on fire near the Karl Grosshans residence on Highway No. 75.

The car, a 1933 model 2-door Buick, was well ablaze and a total loss, estimated by the fire department at some \$200.

The owner, Charles Lathrop, of Omaha, stated that the fire had apparently originated under the dash of the car and spread very rapidly.

Modern Living:—Push a button, turn it on; grab it on the run, and then be gone.

Louisville Paving, Drainage Contracted

LOUISVILLE (Special) — According to an announcement made by the State Highway Department at Lincoln, the contract for the drainage and paving of Fifth Street in Louisville was let to the National Construction Company of Omaha.

The low bid was \$136,118 for the three-tenth of a mile of work within the city limits.

This will run from 190 feet east of Elm Street to where it is paved on the corner of Walnut Street.

Lime Will Help Legume Ground For Several Years

Lime spread on acid soils to benefit legume crops will be effective for many years, especially after the second application.

The lime should be applied before the alfalfa or clover is seeded—preferably several months to a year before seeding—according to M. D. Weldon, University of Nebraska Extension Agronomist.

The lime is beneficial during at least one crop rotation cycle of 3-7 years. It helps the legume crop in the rotation and also the grain crops grown after the legume and is broken.

About a year before alfalfa or clover is to be seeded a second time in the rotation, soil samples should be tested again, Weldon said. If need is shown, it should be applied at the rate indicated by tests.

The second liming will be good for perhaps 10-15 years. In one plot test at the Agronomy Farm in Lincoln, benefits on sweet clover were observed 21 years after a total of six tons of limestone had been used in three applications.

High quality liming materials are available in all parts of Nebraska, Weldon stated.

AID TO METEOROLOGY?

San Antonio — Artificial satellites should eventually improve long-range weather forecasting, according to Dr. J. Wallace Joyce, head of the office for the International Geophysical Year in Washington.

Dr. Joyce said a series of satellites would allow forecasters to keep cloud formations under constant surveillance, thus improving the warning service.
