Mr. and Mrs. Elmer Hallstrom were in Plattsmouth Thursday for dinner for Kerry Ann Case's fifth birthday.

Construction of the new gas main will start in the very near future," according to H. M. Wilkerson, Central's Southern District Manager at Beatrice. The Southern District is responsible for the Company's natural gas operations in eleven southern Nebraska communities, including Hallam.

The Federal Power Commission's authorization of this construction has resulted after months of negotiations and coordination between Central Electric & Gas Company, Northern Natural Gas Company, Consumers Public Power District, and the FPC.

Natural gas will be used as the main source of heat for steam generation in the conventional boilers which will power the Station's 100 megawatt steam turbine generator.

Involved in the construction project estimated to cost \$425,000 is a 10-inch gas main from Northern Natural Gas Company's main line near Adams, Nebraska, to a point near Hallam, metering facilities and other gas lines into the Sheldon Station plant site. Sheldon Station is located 20 miles southwest of Lincoln, just outside of Hallam.

Involved in the construction project estimated to cost \$425,000 is a 10-inch gas main from Northern Natural Gas Company's main line near Adams, Nebraska, to a point near Hallam, metering facilities and other gas lines into the Sheldon Station plant site. Sheldon Station is located 20 miles southwest of Lincoln, just outside of Hallam.

## Couple To Texas On Vacation Trip

Mr. and Mrs. Dennis Smith have returned home from a three weeks vacation in Texas.

Ten days were spent in Padre Island, in the Gulf of Mexico, where they enjoyed fishing and swimming.

Trips were made to Juarez, Piedras Negras, Matamoros, and Via Fuentes, Mexico.

Temperatures in the lower Rio Grande Valley were in the 80's and 90's.

## To Supply Gas To Sheldon Station

Central Electric & Gas Company officials have been informed by a reliable source in Washington, D. C., that the Federal Power Commission has issued a final order authorizing construction of natural gas facilities required to serve CPPD's Sheldon Station Power Plant at Hallam, Nebraska.

This announcement was made by the Company's Nebraska Division Manager L. J. Berkheimer. Central's Nebraska Division, with headquarters at Columbus, is responsible for all phases of the Company's extensive natural gas operations in 54 eastern Nebraska communities, including Hallam.

Involved in the construction project estimated to cost \$425,000 is a 10-inch gas main from Northern Natural Gas Company's main line near Adams, Nebraska, to a point near Hallam, metering facilities and other gas lines into the Sheldon Station plant site. Sheldon Station is located 20 miles southwest of Lincoln, just outside of Hallam.

Natural gas will be used as the main source of heat for steam generation in the conventional boilers which will power the Station's 100 megawatt steam turbine generator.

Construction of the new gas main will start in the very near future," according to H. M. Wilkerson, Central's Southern District Manager at Beatrice. The Southern District is responsible for the Company's natural gas operations in eleven southern Nebraska communities, including Hallam.

The Federal Power Commission's authorization of this construction has resulted after months of negotiations and coordination between Central Electric & Gas Company, Northern Natural Gas Company, Consumers Public Power District, and the FPC.

## Nebraska Tractor Test Summary Now Available

LINCOLN — A summary of the 1960 Nebraska Tractor Tests has just been released in publication form by the University of Nebraska Agricultural Experiment Station.

Copies of "The Nebraska Tractor Tests" may be obtained at Clunty Extension Offices throughout Nebraska.

"The summary includes results of tests on 50 different tractors conducted during the

1960 season," according to Lester F. Larsen, engineer - in-charge of tractor testing in the University's Department of Agricultural Engineering.

"In addition, the summary includes results of tractor tests conducted in 1959. There also is a summary of 83 tests conducted in previous years on tractors reported by their manufacturers as being on the market Jan. 1, 1961."
