May's Birthstone Cleopatra's Favorite

The beautiful deep blue-green emerald is the birthstone chosen by the American Gem Society for those born in May, says Walter Silken of Grove's jewelers here in Plattsmouth. He told us that it's the gem that traditionally symbolizes faith, kindness, and goodness. According to Mr. Silken, the emerald was long ago dedicated to the goddess Venus, and lovers believed that it was endowed with the power of revealing the faithfulness of the beloved.

In discussing the source of emeralds, which belong to the Beryl family of gem substances, Mr. Silken said that this is one of the few precious gems whose main source of supply is found in the Western hemisphere. While at one time, Cleopatra's personal emerald mines in Egypt furnished the first emeralds to the world, today, the best gems are found in Colombia, South America.

The history of both the "Cleopatra Mines" in upper Egypt, and the mines in South America have similar characteristics. Conquerors from other lands over-ran Cleopatra's prize possession on several occasions so their exact location was lost and not rediscovered until 1818 when the Viceroy of Egypt sent a French scientist in search of them, Mr. Silken revealed.

In Colombia, the Spanish conquered and tortured the Inca Indians who

were mining emeralds for their own decorative use. In spite of cruel treatment, the Incas refused to reveal their source and the jungle growth soon overgrew the paths to the mine. It was not until 1555 that one of the mines — the Muzo — was discovered quite by accident. Fine quality emerald is still being mined there, and today it is considered our principal source.

Mr. Silken, who holds the title of Registered Jeweler in the American Gem Society cautioned prospective birthstone purchasers about the emerald. Since the supply is limited, fine quality emerald of good color, and with relatively few flaws, is the most valuable gem on the world market. It is also one that is easily imitated and sometimes unknowingly sold as genuine by jewelers who lack both the instruments and the geological training to properly identify the various mineral substances. For example, Mr. Silken said, the green, clear Demantoid Garnet resembles emerald, and there are some shades of green beryl that are often called emerald, although the stones lack the necessary coloring. Green tourmaline, peridot and green zircon are other gemstones sometimes confused with the precious emerald, but their value is considerably less, Mr. Silken said.
