Obituary

### Mrs. Howard Boyle

Mrs. Howard (Goldie H.) By DRS. W. L. COLVILLE AND ORVIN BURNSIDE Department of Agronomy University of Nebraska the corn population level was increased. The availability of hospital in Kimball, after suff-ering a heart attack.

1.00158

che row spacings for corn, sor-ghum and soybeans. The traditional 40-to-44-inch row spacing for these crops were originally selected for farming with horses. Yet the familiar work horse had prac-lically disappeared from the costly herbicides to control.

tically disappeared from the costly herbicides to control Surviving are her husband; farm today being replaced by weeds. modern tractors with lots of Plant population, method of St. Louis, Mo: daughter, Mrs. planting, row spacing and Doris Parker, Louisville, Colo.; method of weed control were brother, Laurence Gilmore, Lin-

81.02 duced as much as 10 bushels more corn per acre than hilled corn.
30.65 more corn per acre than hilled corn.
183.03 There are many reasons for the increased yields obtained from narrow row spacings. Scientists find that plants in 20-inch rows absorbed considerably more light energy through distribution of leaf area to incoming radiation. Plants crowded in much less energy dige in the second state of the second

Equidistant spacing and weed vest are lessening the impor

average grain yields from 20- tion, and irrigation must be iminch spacings were nearly twice pressed upon the minds of the that of similarly treated 40- farmer, and upon equipment inch spacings that had received manufacturers and agricultural

Machinery-With some modi-fication it is believed that much of the currently available farm equipment can be used. Un-doubtedly some new, more effispacings were compared, had clent equipment will be neces-

in plots that received 2,4-D. Corn yields show that some grain sorghum and irrigated type of chemical or mechanical corn indicate that any change weed control was needed until in row spacing will not be made

Fall panicum, a slightly later in these studies, yields of corn starting grassy weed was not grown in narow rows were suffli-controlled by atrazine. In 40- ciently greater than those from inch spacings where light was the conventional 40-inch spac-plentiful, fall panicum made ex- ings so as to make a change in weight was the direction of the stream of the cellent growth and its affects that direction profitable. reduced yields of corn

#### What's The Hurry'

The yield components respon-sible for grain differences in History repeats itself, as both experiments were barren everybody knows. But what some plants and ear size. Ear size people are wondering is why it and the number of barren plants has to repeat itself so fast was increased by any means St. Louis Post Dispatch
