

OPINIONS OF GREAT PAPERS ON IMPORTANT SUBJECTS

The Caress.

ISPLAYS of affection among members of families are largely matters of temperament. The members of some families never meet or part without ardent demonstrations of love which are delightful to themselves and pleasing to every sensible observer. Who can witness, without a warming of the heart, the cries of

joy, and the embraces with which children welcome the return of father or mother from a temporary absence, or the affectionate parting and meeting of husband and wife? A person who finds in this proper display of pure family affection only an occasion for ridicule is to be pitied. There are other families, however, in which outward demonstrations of love are almost never seen. The members of such families reserve any show of affection for extraordinary occasions when the deepest feelings of the heart are stirred, and even when betrayed into an exhibition of their love, have a feeling of shame as if they had shown a weak side of their nature. There is no reason to suppose that the love of these persons for their family and friends is not as strong and deep as that cherished by those who are more demonstrative, and they would without doubt do as much in case of need for their comfort and pleasure. The repression of the expression of feeling is peculiarly an American vice. The actions of many foreigners when even slightly moved seem to us extravagant and amusing. We cover our deepest emotions with a joke and a laugh. But those who are so chary of displays of proper emotion rob themselves of much pleasure. While demonstrations of love among friends may go so far as to be indecorous or insincere, reasonable exhibitions of affection are both proper and pleasurable. Especially repression by any one of a show of love from a child or a companion is a cruel blow at one of the sweetest and most precious things in life, sincere affection in the heart of a friend.-The Watchman.

The Spirit of Tolerance.

would fain believe that men are growing gore tolerant of each other's opinions, political, religious and otherwise. In our own country. at least, it is easy to discover a growing dispo- or defect. sition to minimize differences of belief and to somewhere says that there are errors which no wise man will treat with rudeness, while there is a possibility that there may be the refraction of some great truth as yet below the horizon. * * *

Sir Thomas Browne, a sectarian of the strictest order. rejoices that he never divided himself "from any man upon a difference of religious opinion." It is only by the recognition of the manhood beneath the opinions, prejudices, preconceptions, perhaps misconceptions, with which we invest ourselves that we can dwell together happily in

this world. * * * Our opinions may come from birth and early environment, and may not be the result of inquiry, study and conviction, however firmly one may believe that we have worked out the problem for ourselves. We should, therefore, extend the greatest charity to those who refuse to go our way. Bishop Taylor, writing on friendship and general benevolence, observes that a good man is a friend to all the world, and he is not truly charitable that does not wish well and do good to all mankind in what he can. This all-embracing friendship, benevolence and tolerance overleaps the confines of sects, creeds, parties and social distinctions. It emanates from the Deity. "The greater our friendships are, the dearer we are to God." We do not all attain this catholicity of friendship, for we are imperfect beings at best, but we should strive for it. Were the world imbued with this spirit, it would be transformed, and oppression, poverty, a thousand woes would be removed .- Philadelphia Ledger.

Forestry and Irrigation Must Go Together.

HAT the time has come for an important, aggressive movement for the reclamation of arid and semi-arid lands in the western part of the United States is plainly indicated by the very large representation of States and Territories at the eleventh national irrigation congress recently held at Ogden, Utah.

last Congress, the fruit of long agitation, makes it incumbent upon these advocates of Federal aid to co-operate with the Government in planning a comprehensive irrigation project for the upbuilding of a great agricultural empire in the western zone of the republic. It is estimated that there are in the semi-arid zones about 600,000,-000 acres of vacant public lands with sufficient water jars. In common parlance, the top hat available under the storage system to irrigate one-sixteenth of it. In his address to the congress President Clark stated his belief that if the Government would expend \$10,000,000 brero de copa," or, "de copa alta." annually for thirty years in providing reservoirs sufficient to reclaim 20,000,000 acres, the land reclaimed would provide homes for 12,000,000 to 15,000,000 people. As this sum might be easily realized from the sale of reclaimed Government land a magnificent contribution to the wealth of the nation could thus be made with but small outlay.

Development and reclamation of the arid West, to be of permanent value, must have its foundations laid in a system of forests for protecting the sources of water supply which will be forever protected by the Government from destruction .- Chicago Record-Herald.

#### What Fast Train Operation Means.

recently made a run on the Lake Shore Railroad of 133.4 miles from Toledo to Elkhart in 114 minutes, probably none of the passengers to respect. It is taken off as a sign gave a thought to the real meaning of such a of regard and deference or of mere magnificent speed performance. In order to courtesy.

The caterpillars are now left free to penetrate the sugar canes, thereby afaccomplish the feat a speed of fully 85 miles

per hour had to be maintained for considerable portions of sian hat of low crown and broad brim, the distance. With a modern passenger train such speed, the hat of the bullfighter on the street can be attained with safety only when roadbed, track, where he receives the homage of the equipment, discipline of employes and other operating conditions are about as perfect as human skill can make them. The train consisted of six Pullmans, each weighing 55 into quite general use, and it is far

The using of electric light in bathrooms, either public or private, so it is asserted by an English engineer, is dangerous in many cases. Writing to the Government Gazette, he says that the electric light switches most usually employed have brass covers and brass knobs, and it is quite possible that this metal work may be in unsupply wires. In such a case a person using the switch, would not notice any defect, but anyone in the act of taking a bath, or standing with bare tempting to turn on the light, would receive a very severe shock which would probably prove fatal even at the comparatively low pressure of 220

Some twenty-five years ago mongooses were imported into Barbados to and formerly in the city wore hand drive away the rats which ate the sugar canes. Now the sugar planters have petitioned the governor to authorize the destruction of the mongooses because the latter, instead of confining their attention to the rats, emies of the moth-borer caterpillars. fording holes for the lodgment of destructive funguses. Thus in the continual struggle for existence nature herself is often found to have estiblished the best system of equilibrium, interference with which always brings more ills than it drives away.

> Has radium any practical uses apart from its value to pure science? It has cured, or at least that the patient was benefited, and that partial sight has agency of radium. But these alleged There is another direction, however, in which it is regarded as possible that radium may prove useful, and that is in the production of light. Prof. Oliver edge of the firefly's secret would enable us to produce light without heat. The source of the energy which the firefly uses, like the source of the energy of radium, is unknown. Through the study of radium, it has been suggested, we may discover a cheaper and better method of illumination than any we now possess.

Last summer Dr. Horace C. Hovey conceived and tested a new method of measuring the height of some of the great dome-shaped chambers in the Mammoth Cave. He called to his assistance the toy balloon, and after some preliminary experiments had his balloons made of a special pattern, with thinner and more elastic rubber than that usually employed. Then, with five balloons tied in a cluster, and each inflated with hydrogen to a diameter of ten inches, he began his at-An acetylene light furnished illumination in the great chambers sufficient to reveal the balloons when they touched the ceiling. The measuring lustrated Sporting News. tape was a light silk thread. The Rotunda was found to be just 40 feet high, and the Mammoth Dome 119 feet 6 inches. But in the vast temple called Gorin's Dome wandering air currents rendered the balloons unmanageable when about two-thirds of the war to the ceiling.

# How to Read.

Edward Everett Hale, in his excellent little book, "How to Do It," discusses the matter of reading. The substance of what he says may be given in the form of the following ten rules:

1. Don't try to read everything. 2. Read two books on the same subject, one solid, one for pleasure.

3. Don't read a book for the sake of saying, I have read it.

4. Review what you read. 5. Read with a pencil in hand.

6. Use a blank book.

7. Condense whatever you copy.

8. Read less and remember it.

9. One hour for light reading should

have one hour of solid reading. 10. Whatever reading you do, do it regularly.

# A Fair Question.

A hypochondriac who visited Sir Conan Doyle in the days when he was a practicing physician complained of "a very bad side." He told his story in great detail, says the London "My friend, don't you want to work | Chronicle.

He put his hand above his waist line, and said:

"I get a sharp pain here, Doctor, whenever I touch my head."

"Why on earth, then, do you touch your head?" Dr. Doyle asked, mildly but drily.

Dun or Be Done. "By Jove, Reggie, I don't see why insolence,"

you've done him."-Boston Globe.

#### STORY OF A CHILD BANK

When Father Came to Leave He Had

No Money. The bank belonged to the child, and it had all the interest of a new toy. In an effort to show the child how

it worked and the object of it the mother had sacrificed all her available change, after which the child had picked up a few pennies that had been carelessly left on a table, and these had followed the rest. Then she had waited to make a financial assault on her father.

"Money," she said to him as soon as he was settled in his favorite chair. "Say! she's beginning early," he

commented, laughingly.

"Oh, I've got a savings bank for her, and she's been crazy to put money h it all day," his wife explained,

"Well, as long as she puts it in the bank it's safe," he remarked, as he gave her a nickel. Her eyes sparkled and she laughed

so joyously that he was enraptured. She was a happy, graceful child, with very pretty and captivating ways of expressing her pleasure.

"That was worth more than nickel," he laughed, as he gave her

"But you mustn't humor her too

much." his wife cautioned. "Oh, this is in a good cause," he urged, with the blind indulgence of a particularly proud father. "It's teaching her to save money, and that's something every child should learn. It isn't like spending it, you know, which would be wasteful."

So he gave her a quarter, and in two minutes he was laughing as joyously as she was and getting as much fun out of her as she was out of the bank. But after dinner it was different.

"By George." he exclaimed, "the bank's got all my money, and I've got to go uptown. I'll have to borrow some change from you."

"What little I had," she explained, "was used in showing Tottie what the bank was for."

"Well, a bill, then."

"Haven't one. I told you this morning you'd have to bring home some money to-night. Did you forget it?"

His blank look showed that he had. "We'll have to open the bank, then," he said. "I've got to have some

"The only way that bank can be opened," she told him, "is by taking it to the savings bank that issued it, and then they'll place the money it contains to the credit of Tottie.'

He swore; not there in the house, but later, while he was taking a nice, brisk, three-mile walk to keep his appointment for that evening. And it was a week before he could be induced to look at the little bank again, which he has classified as a sort of an inanimate confidence man.-Brooklyn

# INDIAN AS FOOTBALL PLAYER.

He Is Unsurpassed in Running and Tackling-Fond of Game.

As a matter of prosaic fact, these hard-working and well-behaved wards of the nation at Carlisle have been from the start models of disciplined and educated conduct on the football field as well as off, and only their tempts at measurement in the cave. shocks of black hair and their swarthy faces mark them as unusual or odd when they line up against the "palefaces," says a writer in the 11-

These lads are intensely fond of football, and they have left in them an inherited indifference to hurts and a toughness of fiber that are their strongest qualities when added to swiftness and agility of movement. I have seen them play through a hard game without one call for "time out," because of injury, and nearly everyone who has seen them play must have noticed the fierceness of their tackling and their fashion of breaking out of a scrimmage on the rebound like so many rubber balls. In running, tackling and aggressive line-breaking the

Indians are unsurpassed. Their weakness is an argument in favor of the claim that football is a question of the trained mind as much as the powerful body. It is mental alertness and adaptability that the Carlisle players find themselves lacking when they meet the first-class teams. To analyze and meet the unexpected, and to solve the problems of a scientific attack and defense of a style to which they are not accustomed puzzles the slower and less effectively trained mind of the Indian, and he cannot make as quick a change of mental base as the white youth. This is to be expected, and the astonishing feature of it is that the Indian player is able to make the showing he does. He comes to Carlisle from the reservation a little savage and in perhaps a half dozen years he is fashioned inte the clean, alert, self-respecting young man who delights those who know good football, played with arder, yet with self-control and intelligence of a high order. While his opponents shout and rave in moments of great stress, he plays the game in silence, without a show of emotion, whether he wins or loses-the type of the true sportsman. my tailor should dun me. It's positive He is a vindication both of the wholesome training of football in the devel-"Dear boy, perhaps he's afraid opment of young manhood and of the magnificent work accomplished by the policy and life work of Col.
