

A Gallant Boy.
A Bostonian was talking about the late Henry Harland.
"Harland was a graceful, gallant soul," he said. "Even in his boyhood he turned the prettiest compliment."
"In his boyhood he studied Latin under a charming young woman."
"This young lady, calling him up in class one morning, said:
"Henry, name some of the chief beauties of education."
"The boy, smiling into his teacher's pretty eyes, answered:
"Schoolmistresses."—Philadelphia Bulletin.

ORCHARD and GARDEN

PLANTING RULES FOR VEGETABLES.

Asparagus—Set out two-year-old plants in trenches six inches deep and one foot apart as early in the spring as ground can be worked. The rows should be four feet apart. Fill in as plants grow.

Beets, Carrots and Turnips—Plant as soon as ground can be worked, and later drill in rows two to three feet apart. Cultivate frequently until plants begin to head, then if possible, place a heavy mulch of manure between rows.

Celery—Make seed-beds in open ground as soon as it can be worked. Pulverize the surface very fine, sow seed in drills eighteen inches apart, and cover by treading with the feet only. Transplant when one or two inches high. Make plant-bed level. Set plants for early celery in alternate rows, two feet and one foot apart, and six inches in row. Cultivate until plants are six or eight inches high then place heavy mulch of manure between rows, and give plenty of water. Blanch early celery with boards in double rows.

Cucumbers, Melons and Squashes—Plant when trees are in full leaf, four to six feet apart each way, except squashes, which plant ten feet. Make the hills especially rich with decayed manure or compost. Protect plants with boxes covered with fine netting.

Spinach, Lettuce, Radishes and Onions—Plant in drills twelve to eighteen inches apart as soon as soil can be worked, and later for succession. Make the soil very compact for onions, place a mulch between rows of lettuce.

Peas—Plant as early as soil can be worked and later in trenches six to eight inches deep, and as wide at the bottom, with flat surface and mix compost with soil. Sow peas thickly, and cover only one or two inches deep. As they grow, draw in soil until trench is filled. Support with wire netting.

Tomatoes, Peppers and Eggplant—Grow plants under glass, or near a sunny window in the house. Transplant again under cover to get stocky plants, and to harden out of doors. Transplant in open ground when trees are in full leaf. Tomatoes four feet apart each way, and peppers and eggplants twelve inches. Mulch tomatoes deeply between rows. Support the vines, and prune them to let in the sun.—Indianapolis News.

DAIRY NOTES.

Over-ripe cream, too much churning and over-working are three general faults in butter-making.
The feed should be good and free from aromatic substances. If these aromatic foods are used they should be employed according to those methods which will not cause odors or flavors to appear in the milk.
Close attention to details is necessary in order to produce two tubs of butter exactly alike in quality. A change in the food will affect the milk and butter and so will any mistake in keeping and ripening the cream and in churning. The food also flavors the butter, as wild onions have been obstacles in that respect. Lack of cleanliness also affects the quality of butter.

Eight gallons of water, per day is the average quantity required for a cow and the milk given is about 87 per cent. water. In some pastures there is no water, the cows being supplied night and morning, which forces each cow to drink four gallons at a time in order to be supplied. As the cow does not know that she must drink four gallons, she may use less and she will reduce her milk supply accordingly.
Feed the cows as regularly as you milk them.
Beware of big horns and a fleshy udder on a milk cow; they are bad points.
If you want to make the straw stack benefit the cow, put some of it under her for bedding.

Let the cow frisk in the open air once in a while; continuous stable life is not good for her.
Hay green in color and sweet in taste is the only quality that is fitted for a cow in milk to eat.
Beauty or color does not make the worth of the cow, but the amount of milk she yields and its quality measure her value.
Do not kick the cow because you are angry; go and kick the barn door or the milking stool instead until you recover your senses. A few lessons will break you of the kicking habit.

BARLEY AS FEED FOR HOGS.

In Denmark they look upon barley as the best feed for good bacon. The grain is well cooked and fed with roots and an occasional ration of uncooked barley is given to sharpen the appetite. The hogs are given plenty of room for range and exercise and no attempt is made to fatten them; on the contrary the effort is made to increase the weight by feeding for the development of those portions of the animal which are made into bacon, and they claim from experience that barley is well adapted for that purpose. In this country, after a pig reaches 75 or 100 pounds almost anything is given it in the way of feed. Some of our packers have been advocating keeping hogs until they are eight or ten months old as a help to produce the firm bacon, but if fed

right a hog may be put on the market at six months old. In many instances the value of roots has been underestimated, but they certainly help to keep the hogs in good condition and prevent them from becoming too fat when young. Without roots it is difficult for them to grow rapidly without getting fat. Fed on something bulky they will grow and at the same time not become very fat.—The Epitomist.

KEEPING BEES IN THE ORCHARD.

We have our beehives in the orchard, as we found that both bees and fruit trees profited by this conjunction. It was thought that the bees were the offenders when we saw punctured and decayed fruit, but bees cannot and do not mar the skin of sound fruit. The predators were found to be either birds or insects, or some other enemy, that did the damage first, and then the bees took their turn at the decayed fruit to extract the juices. The bees are the principal agents in carrying pollen from blossom to blossom, thus adding largely to the quality of the fruit.

These matters are becoming better understood and other beekeepers are realizing the value of keeping their hives in the orchard. The spraying of fruit trees should be done before the blossoms are open, as the poisonous liquids used to kill obnoxious insects can then do no other harm. The practice of spraying when the trees were in full bloom not only destroys the insects, but the honey bee as well, and does more harm than good. Fallowing an orchard, try a locust grove to keep the bees in or a buckwheat patch and fields of white clover to feed the bees.—American Agriculturist.

DUCKLINGS MORE PROFITABLE THAN CHICKS.

The saying often applied to ducks that "they eat more than they are worth" is no doubt a very unjust one. Any breeder raising the Pekin duck on a large scale will prove to you by actual experience that ducklings eat less in proportion to their growth than other poultry. Some of our readers may be a little surprised at this, but upon giving the matter a little thought they can readily understand the reason. It is because the ducklings reach maturity sooner than chicks and of course the longer it takes to raise a bird to maturity the greater the expense, not only of food but of time and trouble. Experiment has demonstrated the fact that with the same quantity of food and care ducklings in 70 days from the shell may be made with proper handling to weigh eight to ten pounds per pair, while chicks in the same length of time will only weigh from three to four pounds per pair. Hence this remark does not count, not applying to ducklings when properly and intelligently handled.—Western Fruit Grower.

BUTTER PRESERVATIVE.

Preserving butter sweet for a considerable time is one of the rare things to do. This method has been used with great success and is a first class preservative. It is inexpensive and easily prepared. Use two parts of the best common salt, one part sugar and one part saltpeter, beat them up together and blend the whole carefully. Take one ounce of this mixture, work it well into the mass and close it up for use. The butter thus cured should stand from three weeks to a month before it is used. The butter will be found sweet and nice.—M. A. Morehead, N. Webster, Ind.

THE IMPROVED FARM.

The man who has a farm that is continually improving is generally the man who makes a study of the fertilizing problem. He posts himself on all matters pertaining to soil improvement and knows only too well how the different leguminous crops will collect nitrogen and store it up for him in the soil; just what crops will supply the humus, etc., and practices a system of rotation that improves rather than impoverishes his land.

THE DRY BARNYARD.

While the paved barnyard is fine if one can afford it the expense is unnecessary if one is willing to use a little brains, a little muscle and considerable gravel. In the first place fill up the holes and get the yard level; then cart gravel until there is enough to pack the stuff down firmly from the center to the edges all around and have the gutters outside the barnyard fence.

A Change of Clothing.

Gustave Anderson, a prisoner in the Workhouse, died of pneumonia because of the rapid change to the prison suit from an enormous amount of clothing he wore when received. When told to disrobe he started the guards by removing seven caps.
Then he added to their amazement by taking off six coats, two vests, five pairs of trousers, four shirts, and two undershirts. His shoes were stuffed with straw. Soon after he donned the Workhouse garb he was seized with pneumonia, which resulted in his death. He was sent to the Workhouse on the charge of vagrancy, and his home is not known.—Tucson (Arizona) Citizen.

A Unique Newspaper.

A unique newspaper has made its appearance at Zurich, Switzerland. Its object is to supply a list of engaged couples to tradesmen for business purposes.

Don't Poison Baby.

FORTY YEARS AGO almost every mother thought her child must have PAREGORIC or laudanum to make it sleep. These drugs will produce sleep, and **A FEW DROPS TOO MANY** will produce the **SLEEP FROM WHICH THERE IS NO WAKING.** Many are the children who have been killed or whose health has been ruined for life by paregoric, laudanum and morphine, each of which is a narcotic product of opium. Druggists are prohibited from selling either of the narcotics named to children at all, or to anybody without labelling them "poison." The definition of "narcotic" is: "A medicine which relieves pain and produces sleep, but which in poisonous doses produces stupor, coma, convulsions and death." The taste and smell of medicines containing opium are disguised, and sold under the names of "Drops," "Cordials," "Soothing Syrups," etc. You should not permit any medicine to be given to your children without you or your physician know of what it is composed. **CASTORIA DOES NOT CONTAIN NARCOTICS**, if it bears the signature of Chas. H. Fletcher.

Letters from Prominent Physicians addressed to Chas. H. Fletcher.

Dr. J. W. Dinsdale, of Chicago, Ill., says: "I use your Castoria and advise its use in all families where there are children."
Dr. Alexander E. Mintie, of Cleveland, Ohio, says: "I have frequently prescribed your Castoria and have found it a reliable and pleasant remedy for children."
Dr. J. S. Alexander, of Omaha, Neb., says: "A medicine so valuable and beneficial for children as your Castoria is, deserves the highest praise. I had it in use everywhere."
Dr. J. A. McClellan, of Buffalo, N. Y., says: "I have frequently prescribed your Castoria for children and always got good results. In fact I use Castoria for my own children."
Dr. J. W. Allen, of St. Louis, Mo., says: "I heartily endorse your Castoria. I have frequently prescribed it in my medical practice, and have always found it to do all that is claimed for it."
Dr. C. H. Glidden, of St. Paul, Minn., says: "My experience as a practitioner with your Castoria has been highly satisfactory, and I consider it an excellent remedy for the young."
Dr. H. D. Benner, of Philadelphia, Pa., says: "I have used your Castoria as a purgative in the cases of children for years past with the most happy effect, and fully endorse it as a safe remedy."
Dr. J. A. Boardman, of Kansas City, Mo., says: "Your Castoria is a splendid remedy for children, known the world over. I use it in my practice and have no hesitancy in recommending it for the complaints of infants and children."
Dr. J. J. Mackey, of Brooklyn, N. Y., says: "I consider your Castoria an excellent preparation for children, being composed of reliable medicines and pleasant to the taste. A good remedy for all disturbances of the digestive organs."

YOU CANNOT CURE

all inflamed, ulcerated and catarrhal conditions of the mucous membrane such as nasal catarrh, uterine catarrh caused by feminine ills, sore throat, sore mouth or inflamed eyes by simply dosing the stomach.
But you surely can cure these stubborn affections by local treatment with
Paxtine Toilet Antiseptic
which destroys the disease germs, checks discharges, stops pain, and heals the inflammation and soreness.
Paxtine represents the most successful local treatment for feminine ills ever produced. Thousands of women testify to this fact. 50 cents at druggists.
Send for Free Trial Box
THE R. FAYTON CO., Boston, Mass.
A Japanese newspaper asserts that if it were not for educational works Japanese publishers would be virtually without occupation.
There is more Catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease and prescribed local remedies, and by constantly failing to cure with local treatment, it became known to be a constitutional disease and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials.
Address F. J. CHENEY & CO., Toledo, O. Sold by Druggists, 75c.
Take Hall's Family Pills for constipation.
