She-A girl should look before she leaps.

He-She should look pretty or she may not get a chance to leap.

#### The Worth of the Voice.

New wonderful is the human voice! It is indeed the organ of the soul! The intellact of man sits enthroned visibly upon his forehead and in his eye, and the heart of man is written upon his countenance. But the soul reveals itself in the voice only; as God revealed himself to the prophet of old in the still, small voice, and in the voice from the burning bush. The soul of man is audible, not visible. A sound alone betrays the flowing of the eternal fountain, invisible to man .-Longfellow: Hyperion.

Tea Time in Chile. Either tea or yerba mate is served In Chile at 4:00 p. m., not only in the homes but at clubs, restaurants and hotels, and many business houses. A cut of tea and a roll or small cake in the club or hotel cost from eight to twelve cents United States gold, while the business houses serve it free rather than have the clerks leave their work or go out for it.

Raw. Bore-Do you believe oysters have

Bored-Certainly I do, since they know when to shut up.

Mrs. Knicker-Will your furniture go in the new flat? Mrs. Bocker-It will after it's smashed.

WANTED TO SLEEP Curious That a Tired Preacher Should Have Such Desire.

A minister speaks of the curious effect of Grape-Nuts food on him and how it has relieved him.

"You will doubtless understand how the suffering from indigestion with which I used to be troubled made my work an almost unendurable burden; and why it was that after my Sabbath duties had been performed, sleep was a stranger to my pillow till nearly daylight.

"I had to be very careful as to what I ate, and even with all my care I experienced poignant physical distress after meals, and my food never satisfied me.

"Since I began the use of Grape-Nuts the benefits I have derived from it are very definite, I no longer suffer from indigestion, and I began to improve from the time Grape-Nuts appeared on our table.

"I find that by eating a dish of this food after my Sabbath work is done, (and I always do so now) my nerves are quieted and rest and refreshing sleep are ensured me.

"I feel that I could not possibly do without Grape-Nuts food, now that I know its value. It is invariably on our table-we feel that we need it to make the meal complete and our children will eat Grape-Nuts when they cannot be persuaded to touch anything else." Name given by Postum Co., Battle Creek, Michigan.

# HAMUS ON DRY FARM

Native of Syria, and Delights in Hot, Dry Weather.

Is Not Affected by Hot Winds, as Corn and Other Grains, and Matures in Six to Eight Weeks From Planting.

In the summer of 1900 I filed on a claim on which I am living today, and since then I have been studying the climate and the soil of this country, writes E. Rizk of Stanley county, South Dakota, in the Orange Judd Farmer. The more I studied the better I felt, because it put me in mind of the place where I was born and raised, on the farm of Jim Janeen Ei-Bakka, about 35 miles from Damascus, Syria. In that section many good crops are raised without a drop of summer rain. So not long after settling here I sent to the old country and got about three pounds of hamus. This is a pea that we always depended upon for summer crops, and a table vegetable.

By the way, I must tell what hamus is like, and for what and how it is used. This plant is a member of the pea family and used practically the same way for cooking, and it may also be roasted and salted or sugared as peanuts. In addition it is fine feed for horses and hogs, and, in fact, for all kinds of live stock. Last spring about planting time I showed the pea to my neighbor and gave him a small package of the seed and asked him to try it on his place. The balance of the seed I planted myself.

The first lot I seeded May 17, 1910. I planted two rows on a well-worked seed bed, placing the seed 18 inches apart in row with the same distance between. The other portion of the seed I planted on new breaking; however, this was also well prepared. This seed was planted the first week of June. Both seedings came up about the same time, as it was cold the latter part of May, and the seed did not germinate until the weather became warm. After spring really opened it did not take long for the plants to come up, probably from five to eight

After hamus was planted we had no rain worth mentioning; in fact, we had only a light shower about June 20, which was not even enough to settle the dust, and that was the first and last I received after planting the crop until after harvest. The plants did splendidly and grew as fast as Russian thistles. The stalks grow much like the thistle, about 12 to 15 inches high and about the same in diameter. It blossoms and produces pods which contain one of the peas, ordinarily only one. The seeds are a trifle larger than the common garden pea, and have a cream-colored hull.

It seems strange that natural salt accumulates on the plant while green, and yet it is a fact, and when this is washed out by rain it delays growth. The drier the season and the hoter the weather the better the plant Alfalfa and Other Deep Rooting Plants seems to thrive. It is not affected by hot winds, as corn and other grains, and matures from six to eight weeks from planting, depending largely upon the season. I harvested mine while green last Summer for table use on July 5. On August 7 we had a good rain here, and after that the plants came up and made more growth the

erop, I might add that I found from pacity to withstand conditions im-50 to 160 pods on a plant, and every posed. Among the qualities desirable seeds. In my estimation hamus will severe winter weather unprotected,

able occupations on high priced land surface soil. Plants that remain dorfor the reason that the land will im- mant during drought and do not die, prove in productiveness from year to but start into growth with new supyear and there is a uniform revenue plies of moisture, are of great advanwhich will meet current expenses and tage. leave a surplus which is sure to come if the business is conducted with ordinary intelligence.

Watch for Lice.

When a spell of bad weather comes, | Salt regularly twice a week is betlook out for lice. They multiply fast | ter than once. when hens and chicks have to be confined to their coops much of the time. These pests will soon reduce the vitality of the liveliest chick ever hatched. so that it will be in good condition to take gapes or some other ailment.

Small Horse Costs More.

a small horse doing the work of a draft horse is less than that of the heavier one. Experiments have shown that a smaller horse will, in a year. consume as much feed as the heavier one. At the same time the work will tell more heavily upon him.

Time to Thin Peaches.

The best time to thin peaches is just when the pit is hardening. In the ing. country between 35 and 40 degrees latitude, this is done June 10 to 15. Further south, of course, the work as that helps to keep the pastures in should begin earlier.

## PEST OF VOLUNTEER GRAIN

Evil May Be Greatly Minimized b Using Rotation Given Herewith-Corn is Best Crop.

The extent to which volunteer grain grows in dry areas is perplexing to the farmer who has in mind the rotation of crops upon his farm. In western areas where winter wheat only is grown the problem is easy. By the system followed the farmer summerfallowed one year and the next year grows wheat. While he is summerfallowing his land he has the chance to destroy much grain that would otherwise give him trouble. But in many areas even in the dry country, some rotation is wanted. How, then, can the farmer keep down the pest of volunteer grain that if present will destroy the purity of his grain and cause it to mix, in some instances to a vexatious extent.

This evil will be greatly minimized by the following rotation: Summerfallow one year, grain; some cultivated crop, grain. This rotation would only call for the real summer-fallow FREED FROM SKIN DISEASE one year in four. Two years would be devoted to cleaning the land, that is the year that it was fallow and the year that the cultivated crop was and also from weeds. The summerfallow should take away everything that is offensive the year that it was being done, and the cultivated crop did his duty toward it.

corn, potatoes, beans and field roots may not pay for such cultivation. That has yet to be proved. Of these crops corn will be away beyond all compargrown over wide areas. It is the easiest of these crops to grow and is also the surest except in the case of potatoes. It is also the most needed, as its fodder is wanted on every farm in the dry area.

If alfalfa can be introduced into the rotation in a somewhat regular way it will still further aid in safeguardyears, say three or four, the volunteer grain would perish. How long such grain would live in the ground would depend chiefly on the amount of moisture in the soil, but it is about certain that ordinary grain would not retain vitality longer in areas where the moisture is enough to grow annual crops of grain.

Some gain will probably result from disking the ground right away after harvest. Of course should the weather continue dry up to harvest but little of the grain would sprout. But should any considerable amount of rain fall before growth would cease much of the volunteer grain would sprout and it would then be buried with the plow.

## EXCELLENT DRY FARM CROPS

Avail Themselves of Moisture at Great Depths.

In a bulletin recently issued by the experiment station of the Montana Agricultural college on crops for dry land farms, the following general observations are given:

Success is more likely to follow the same as before, but produced little careful selection of crops adapted to dry land conditions than to promiscu-Regarding the yield per acre of this ous planting of seeds regardless of capod contained one and sometimes two are hardiness and ability to survive yield as much as 40 bushels per acre. drought resistance, structurally ca-My neighbor whom I supplied a pable of living in dry atmosphere withsmall quantity of seed was well out undue transpiration of water.
