How Men and Women Face Death. How do men and women face death when the sentence is pronounced by Pasewalk's First Addithe doctor? A medical man tells us his experience. Tell the man of higher Lot. Blk. Amt. \$16.77 type and greater intelligence, he says, 13.40 that he is facing death and he begins 10.07 to fight, demands a consultation, talks 5.02 about going to specialists and fights 16.77 grimly to the finish. Tell a woman 13.40 the same facts, and she lies back to await her fate. All women are fatal-11.75 lists. On the other hand, tell a man that he has one chance in a thousand to recover if he will undergo an operation, and he will trust to his own 10.07 strength and endurance rather than undergo the knife. The woman will choose the thousandth chance and sub-9,22 mit to the operation with astounding 3.37 | calmness.-Woman's Life,

observations with regard to the "cut heads" which are treated at the hospitals between 12 and 2 a, m. The Post says that the house surgeons have noticed a curious difference in the sexes on different nights. On Saturday nights the subjects are mostly men who have received their wages, redeemed their clothes from pawn and drunk enough to lead to a brawl. Monday night, however, is "ladies' night." The men have gone to work, and the wives have taken their husbands' best and only suit to the pawnshop, and then It is their turn to drink the proceeds and cut one another's heads, The usual answer to the question "Who did it?" is, "Another lady wot

Married Paupers and Divorce. "An odd thing about married paupers is that they like to live separate," said

"You know how almshouses are arranged. There's a meir's ward, a women's ward and a mixed or married ward. Well, the mixed ward is always nearly empty. Not that we lack married paupers. Oh. no. But the husbands prefer to bachelor it among the men and the wives to old maid it ried paupers get the more vehement is their Insistence on separate living.

Smokeless Powder Inventor Now Plans to Lengthen Life.

TO USE CHLORINE SOLUTION.

Believes He Can Force It by Electricity Through All Parts of Body-Death Dealing Ability Will Be Turned to Killing Disease Germs-Features of His Device.

Hudson Maxim, Inventor of the maxfinite smokeless powder, high explosives and torpedoes which are the most powerful life destroying agents in the history of the world, has suddenly turned his line of effort from the field of death and is working assiduously along lines entirely opposite. His present efforts are being devoted to the perfection of a device that will cure all disease with a solution of chlorine passed through the human body by the aid of electricity.

Already drawings of the cabinet in which the treatment is to be administered have been filed in the patent office at Washington, and the great inventor expects soon to be granted his 15:00 patent. All that he is now looking for is the proper electric current—one that has a higher potential than any heretofore used safely on the human body. The great inventor was seen at his

villa, situated picturesquely on the

shore of Lake Hopateong, New Jersey. "I can hardly explain," he said to a reporter of the New York American, Thow I turned from the manufacture of instruments of death to the invention of something that will prolong human life. I've seen the success of one, and perhaps I am tired of that and desire something new. I have great faith in my newest idea and hope that it will become a practical part of life, and before long too 1 wish to say famility, however, that at the present time it is in embryo, but it is none the

less, to my mind, perfectly practical. "A good deal of experimenting has already been done by different medical men with high potential electric currents, both for the direct germicidal infinence of the electricity likelf and also for the purpose of passing remedial agents into the tissues, but no great success has yet been attained.

"My idea is to use electric currents of very much higher potential than heretofore. Of course the amperage of the current need not be great. "A well known process of making

chlorate of sodium and chlorate of potash is by passing chlorine out of solution through a partition impervious to the flow of a liquid, but previous to the passage of the molecules of chlorine under the influence of the electric current, so that the potash solution on receiving the chlorine through the impervious partition is converted into chlorate of poinsh.

"My idea is to interpose the human edial agent, through the human body 13.00 On motion the following bills were by means of a very high potential electric current of low amperage."

"By killing the disease germs in a

"But do you claim or expect that you can prolong life indefinitely?" persist-

"No," quickly answered Mr. Maxim,

"because death is as much a part of life as is birth. Life can only be prolonged in the human body to a certain point. If my device proves successful we shall be able to do what Bob Ingersoll said he would do if he was God Almighty-'make good health catch-

At the request of the reporter Mr. Maxim made a diagram of his new device. It will be a cabinet of considerable size and will be divided into three parts. On either side will be tanks. One will hold an alkaline solution, while the other will contain a solution of chlorine. In the compartment between these two, wherein will sit the patient under treatment, will be another solution, which is the secret of the whole thing. Its nature the inventor refused to make known,

In the two outer compartments are powerful electrodes, and by the electricity as the agent the chemicals from the various solutions will be passed through the body.

The main idea is to interpose the human body as a part of the diaphragm, in electro osmosis, or cataphoresis, and in this way force the germ killing chemicals into and through the human tissues, lymph and blood.

His Own People.
