

OLIVE GROWING IN CALIFORNIA. Olive growing is now all the rage in California and warnings are thrown out that the business is likely to be overdone. In the neighborhood of Pomona, for instance, more than 300,000 trees have already been planted. It must be admitted that Californians are prone to excesses in the matter of fruit culture. During the last 25 years there have been at different times a craze to cultivate the grape, a period of hardiest pear, and other popular fruits, as if it overshadowed everything else in importance. The last fashionable horticultural fad is the olive. A writer on the subject points out that Pomona, being the headquarters for the sale of olive cuttings, the conclusion that elsewhere in California the olive is so largely cultivated is unwarranted. He thinks that the distribution of cuttings may go on for years without danger of overstocking the market. Pure olive oil, he said, is hard to find in the United States, and in supplying it will consist the large profits of the growers. The imported article is in most cases adulterated, and the admission is made that the California olive is sometimes not as pure as it might be, the high price tempting the dealers to fraud. Were the state law against the adulteration of olive oil strictly enforced, he says almost every grocer would be found guilty. Pure olive oil, he says, is not so common as it is represented to be. He has examined thirteen samples of California oil recently examined by the board of horticulture only two were found to be pure. The oil of sunflowers and cotton seed enters largely into the adulteration.—E. X.

WHEAT exports from the United States for the fiscal year ending June 30 amounted to 152,803,086 bushels, against only 24,201,292 bushels for the corresponding period of 1920. The amount of wheat was still further exceeded by the increased price, which was \$156,908,905 for the last year, against only \$50,493,320 for the year previous. The price of the smaller crop was less than a dollar a bushel; that of the large crop was a trifle over a dollar. The price of wheat took a rise last fall that enabled farmers to get more nearly the export value of their large wheat crop than they were ever able to do before.

Pupils in the schools of Japan are taken out rabbit hunting one day in every autumn.

**"August Flower"**  
I had been troubled five months with Dyspepsia. I had a fullness after eating, and a heavy load in the pit of my stomach. Sometimes a deathly sickness would overtake me. I was working for Thomas McHenry, Druggist, Allegheny City, Pa., in whose employ I had been for seven years. I used August Flower for two weeks. I was relieved of all trouble. I can now eat things I dared not touch before. I have gained twenty pounds since my recovery. J. D. Cox, Allegheny, Pa. ©

**HAY PRESSES**  
Do you want to buy an Army Press awl cheap? We can fit you out with either a 6 or 7 column size, at prices that will make you shiver in August.  
DON'T YOU WANT either a small Pilot or Model Jobber? If so, come quick, and get a bargain. Address: WESTERN NEWSPAPER UNION, OMAHA, NEBRASKA.

**Figures Never Lie**  
WAGES HAVE INCREASED UNDER THE MCKINLEY BILL.  
And Still They Continue to Rise—The Mugwump New York Times Called to Task for Its Assertions—The Republican Side.  
It has been asserted and reiterated over and over again that wages have fallen since the McKinley tariff was enacted. It is the one single survivor of the multitude of falsehoods sent abroad during the campaign of lying in 1890. It survives, not that it was more fit than the others—"McKinley prices" for example—but from the difficulty of securing labor statistics complete enough to obliterate it. "McKinley prices" were disproved by simply comparing the market reports as published before and after the new law took effect. But there is no regular reports published on rates of wages. Tens of thousands of changes are annually made in this country, some involving increased, others decreased wages or hours of labor. They have occurred, do occur and will occur independently of any tariff in response to the varying conditions of industry. If orders for goods come flowing in, the labor in the industry which makes the goods will be fully employed and wage reductions will be impossible. But if short crops curtail the purchasing power of consumers, wages will become inadequate to the supply because of overproduction, or a change in fashion even, or for any other cause, labor in the industries concerned will be injured, and if the unfavorable conditions continue, wages will fall. The law of supply and demand will continue to operate inside, and so far, independently of any tariff law that can be framed. Thousands of changes in wage rates, both up and

down, were made in the most prosperous years this country ever knew. They are made now under the McKinley tariff, and will be made unless Edward Bellamy or Henry George succeeds in revolutionizing the existing industrial system. As a rule, changes in rates of wages do not get into the public press beyond the local papers. A reduction in wages, being more unusual in this country than an advance, is more likely to be chronicled. Ever since the McKinley law passed, the free-trade papers all over the country have watched like vultures for instances of wage reductions, and gloated over these misfortunes of the working people like birds of prey. The New York Times in particular has been on the alert to record and exult over every reduction of wages, in order to ascribe it to the McKinley law. Reading its editorials on this subject one would get the impression that a five or ten per cent decrease in wages was an unknown occurrence before the McKinley act passed. We have before pointed out its shallow dishonesty in this respect. It collects ten or a dozen or a score of cases of reduced wages, and proclaims that wages generally are falling. It needs not the thousands of cases of increased pay which have occurred under the new law.

Only after a painstaking canvass of all the industries of the country, and of the wage changes occurring in them, can any one form an intelligent opinion as to whether the general course of wages is up or down. But your zealous free-trade "reformer" does not care for that. In this connection we have already called attention to the fact that the annual report of the Bureau of Statistics of Labor of New York State for 1901 chronicles 194 cases of increased wages, 208 cases of decrease, and 109 cases of labor-virtually increase of wages also—and only 441 cases of reduced wages. Yet all that year the New York Times was loudly proclaiming that wages were generally falling. No less instructive is the record of the State Bureau of Labor Statistics of Illinois, which has issued a report on coal statistics for that State. Not only has more coal been mined in the first year of the new tariff and more men been employed than ever before, but wages have advanced. It is a fact which has been cheaper, as will appear in the following figures from the report:  
Number of employees, prices and products in the coal mines of Illinois:  
Year. Price per ton. Employees. Product, tons.

With a single exception, and that the most unimportant, wages were higher in 1891 than in any of the other years considered. These are the results arrived at by scientific investigation. Similar results would appear in every State from similar investigations. Wages are going up under the new tariff.—American Economist.

**FIGURES NEVER LIE**  
WAGES HAVE INCREASED UNDER THE MCKINLEY BILL.  
And Still They Continue to Rise—The Mugwump New York Times Called to Task for Its Assertions—The Republican Side.  
It has been asserted and reiterated over and over again that wages have fallen since the McKinley tariff was enacted. It is the one single survivor of the multitude of falsehoods sent abroad during the campaign of lying in 1890. It survives, not that it was more fit than the others—"McKinley prices" for example—but from the difficulty of securing labor statistics complete enough to obliterate it. "McKinley prices" were disproved by simply comparing the market reports as published before and after the new law took effect. But there is no regular reports published on rates of wages. Tens of thousands of changes are annually made in this country, some involving increased, others decreased wages or hours of labor. They have occurred, do occur and will occur independently of any tariff in response to the varying conditions of industry. If orders for goods come flowing in, the labor in the industry which makes the goods will be fully employed and wage reductions will be impossible. But if short crops curtail the purchasing power of consumers, wages will become inadequate to the supply because of overproduction, or a change in fashion even, or for any other cause, labor in the industries concerned will be injured, and if the unfavorable conditions continue, wages will fall. The law of supply and demand will continue to operate inside, and so far, independently of any tariff law that can be framed. Thousands of changes in wage rates, both up and

down, were made in the most prosperous years this country ever knew. They are made now under the McKinley tariff, and will be made unless Edward Bellamy or Henry George succeeds in revolutionizing the existing industrial system. As a rule, changes in rates of wages do not get into the public press beyond the local papers. A reduction in wages, being more unusual in this country than an advance, is more likely to be chronicled. Ever since the McKinley law passed, the free-trade papers all over the country have watched like vultures for instances of wage reductions, and gloated over these misfortunes of the working people like birds of prey. The New York Times in particular has been on the alert to record and exult over every reduction of wages, in order to ascribe it to the McKinley law. Reading its editorials on this subject one would get the impression that a five or ten per cent decrease in wages was an unknown occurrence before the McKinley act passed. We have before pointed out its shallow dishonesty in this respect. It collects ten or a dozen or a score of cases of reduced wages, and proclaims that wages generally are falling. It needs not the thousands of cases of increased pay which have occurred under the new law.

Only after a painstaking canvass of all the industries of the country, and of the wage changes occurring in them, can any one form an intelligent opinion as to whether the general course of wages is up or down. But your zealous free-trade "reformer" does not care for that. In this connection we have already called attention to the fact that the annual report of the Bureau of Statistics of Labor of New York State for 1901 chronicles 194 cases of increased wages, 208 cases of decrease, and 109 cases of labor-virtually increase of wages also—and only 441 cases of reduced wages. Yet all that year the New York Times was loudly proclaiming that wages were generally falling. No less instructive is the record of the State Bureau of Labor Statistics of Illinois, which has issued a report on coal statistics for that State. Not only has more coal been mined in the first year of the new tariff and more men been employed than ever before, but wages have advanced. It is a fact which has been cheaper, as will appear in the following figures from the report:  
Number of employees, prices and products in the coal mines of Illinois:  
Year. Price per ton. Employees. Product, tons.
