AMICK'S DISCOVERY ITS BEARING ON ISOLATION OF

THE CONSUMPTIVES. The Action of the Michigan Board 61 Health In Designating Consumption

Contagious Disease Discussed-Cure the Best Alternative.

The recent action of the Michigan State Board of Health in placing consumption on the list of contagious dis eases and requiring safeguards to prevent its spread, is causing widespread newspaper discussion as to the propriety of similar action in other States. County Medical Society, of Philadelphia, has petitioned the Board of Health there to isolate consumptives. The

Pan-American Congress also passed a resolution at the recent Washington convention calling on the National government to take steps in the same direction, even going so far as to ask President Cleveland to give his personal attention to the matter.

The result has been that National, State and civic authorities have been appealed to, thereby causing consternation to thousands of consumptives in every state in the Union, who are in terror lest they should be torn from their homes and friends, and turned over to "special hospitals," which, in reality, will be pesthouses. The turihoil which the proposition tears of agony rolling down the in special hospitals, numerous outrages cure of the disease, I sought out the

hospitals, but machinations will arise

'Do you think that consumption is

"Probably decreasing."" "Probably decreasing, on account of better methods used in treating it. The newspapers can do great good by call-ing attention to the great dangers of sumption and noting the necessity for great care in guarding against the disease. People are too careless. No doubt isolation would be of benefit to patients, and do good, but it could not fore giving their opinions. be enforced.

Dr. W. R. Amick, who resigned his ssorship in the Cincinnati College of Medicine and Surgery, held for 17 years, to devote himself to curing con-bumption, said: "I am, of course, opposed to isolaticil,

ecause my theory is that consumption Not only has the Michigan Board of is not directly produced by any outside Health taken this radical step, but the cause. I hold that the bacillus microbe is the effect, or product, and not the cause of the disease, so it is very evi-dent, in my opinion, that isolation would accomplish no good,"

"You mean to say, then, that the inhaling of the dried-up sputa, containing these microbes, is not harmful?" the day. It was agreed that if Amick suc "On the contary," Dr. Amick replied.

"any dust or extraneous matter would produce a mechanical irritation of the parts and be likely to occasion lung trouble-as the inhalation of the dried sputa of a consumptive. Just as a speck of dust irritates the eye, the inhalation of any foreign matter irritates the air ing and the patients either died or got passages

Continuing, Dr. Amiek said:

"You may state as my opinion that the natural secretion of the healthy mucous membrane either destroys the germs so inhaled or renders them of no effect, so far as any intrinsic power to produce the disease is concerned. If consumption was either contagious or infectious, has created, is steadily increasing, and I would have had it long since, as I am a great wave of opposition is appearing. daily closeted with the worst possible Friends of consumptives declare that | cases, and during the investigation leadif isolation of the patients is attempted | ing to my discovery of the cause and will result and that not only will un- worst forms of it and made micros opie feeling persons who want to get rid of examination of diseased sputa a marked sick relatives, dump them upon the feature of my professional work and re-
