The Land of Promise Is the mighty West, the land that "tickled with a hoe laughs a harvest:" the El Dorado of the miner; the goal of the agricultural emigrant. While it teems with all the elements of wealth and prosperity, some of the fairest and most fruitful portions of it bear a harvest of malaria reaped in its fuilness by those unprotected by a medicinal safe-guard. No one seeking or dwelling in a malarial locality is safe from the scourge without Hostetter's Stomach Bitters. Emi-grants, bear this in mind. Commercial travelers sojourning in malarious regions should carry a bottle of the Bitters in the traditional gripsack. Against the effects of exposure, mental or bodily overwork, damp and unwholesome food or water, it is an inbiliousness, dyspepsia, nervousness and loss of strength are all remedied by this genial

Ship or write for **E ROBT. PURVIS** Established 1870. 1216 Harney Omaha

One peculiarity of Sheridan Knowles,

the clever Irishman, was his absentmindedness. At one time he mailed a large sum of money to his wife in bank notes and discovered a week afterward that the letter had never reached her. In a towering rage, he wrote to the postmaster general and was informed that the notes were quite safe in the dead letter office, for Knowles had not only omitted to address the envelope, but had neither signed his name to the

letter nor inclosed his address. He was always blundering over the identity of two friends, Mark Lemon and Lemon Rede, and not only confounded their names, but their persons. One day he met the pair arm in arm and was more perplexed than ever. "Well, now. I'm bothered entirely:" he exclaimed in his choicest brogue. Come, one of you tell me which of you two is the other?" In the days of dear postage Knowles

"You are very kind." said the latter, "but where are you going?" "Well, now," replied Knowles,

A Workman's Time Checker.

An English time check has been designed for use in factories and workshops for keeping a register of the time of the workmen. Its inventor claims that it is the only apparatus of the kind It contains no special clockwork and no ordinary clock can be adapted for the purpose. Each man is provided with checks, one of which he drops into the slot of the apparatus on entering the building. The checks are subsequently removed, and after their number have been registered placed on a board ready for the men to take when next leaving work. Any number of slots can be provided, but as a rule two only, marked respectively "early" and "late," are required. When the time for beginning work has gone by, the "early" slot is closed by an electrical attachment, and the "late" slot is opened. Before the next spell of work commences the "late" slot is closed, and the "early" of the workmen. - Exchange.

EVILS OF LOCATING ROADS ON THE SECTION LINES.

Necesity of Placing Country Roads Under the Management of Experienced Men-Difficulties Sometimes Encountered in Securing the Right Kind of Material for Good Roads.

The problem of securing permanently good roads in Iowa is hedged round with many difficulties. First, the land being laid off in sec-

tions, each one mile square, and the roads being located almost universally on section lines for the convenience of the farmers, no attention whatever has been paid to securing easy gradients with a view of decreasing the cost of transportation. No matter what the place, wher commercial fertilizers large cob? Is it any objection to an nature of the ground, unless by reacon of streams, lakes or high bluffs where the farmers of the West the question | the cob is large? What is the rule | a road is altogether impracticable, it is of purchasing nitrogen has hardly to be adopted. Is it not how much placed on the section lines. Roads of this character are purely local, affording an outlet for the farms adjoining, and the utmost that is attempted is to Paris. make them passable when roads better located are ordinarily good. It follows from this that in the newer sections the road system of the state is constantly becoming worse, and for two reasons; the roads themselves are more difficult to travel, and the distance from point to point, by reason of the necessity of turning square corners, increases with the settlement of the country. The best roads lowa ever had were made before the public roads were located. In those primitive days travelers took either the valleys or the ridges, generally the latter, and enjoyed roads reasonably level and undisturbed by injudicious improvement by supervisors who lack the conception of either

what a good road ought to be or how to make one. As an instance of the lengthening of the roads we might give the following: A county seat is located, as many county seats are, in the centre of the county. A thriving town springs up in the corner of the county, made up of sixteen townships, each six miles square. The distance from the county seat to this town on an air line is nearly seventeen miles. Counting the meanderings necessary to secure the best line, it would be in the neighborhood of twenty, whereas when the

country is fully improved and the roads located on section lines, it is twenty-It is quite true that but few of these roads on section lines are anything more than outlets to the farms adjointhe embryo. however this may be. | fine their rooting to the spot that is | ing; farmers in going to town selecting careful experiments have proven to be plowed. Feed the hogs some those roads that have the best bridges, that weevily peas more often fail to milk and wheat middlings, and then the best gradients and fewest mud holes. Any system therefore that will give good roads to the state must provide first, either for making direct those vines grown from good seed. than it can be done in any other way roads that save distance between the There are three main objects in and at less cost. To obviate the difficulties great gods, persuasion and necessity, than a year she was comfortably off for that have grown out of this custom of the Andrians replied that the Athen- the rest of her life. farm to be crossed diagonally by a public highway, no matter what the ad-

vantages may be to the public. The second difficulty in securing good roads, such as are common in old settled countries and in the older states, lies in the absence of suitable material for covering the road bed. There are comparatively few gravel deposits in the state; and while a large section of the state is abundantly supplied with rock, and particularly the rocks peculiar to the carboniferous formation, these lie at from ten to fifty feet under the surface of the prairie and are exposed only along the streams. not come out and dance when I It is only in certain localities, therefore, that material can be found for

making macadam roads. The third difficulty in securing good roads is the independence of the lowa farmer, the tenacity with which he clings to that which is, and the suspicion with which he regards any scheme that involves a large expenditure of money, of which he is expected to contribute the greater portion. He has figured the cost of macadam, of gravel and paving and has concluded that the lowest cost at which the roads generally advocated could be furnished would involve him hopelessly in debt, if not bankrupt him entirely. The more the citizen, or the man of the city, talks to him about the necessity of macadamized roads, of which he is to bear the expense, the more resolutely he sets himself against any proposition to macadamize the road on the line of

his farm, and concludes with Hamlet, What then can be done for good roads in lowa? While macadamized and gravel roads are yet far in the distance except in limited localities near the large cities, there is very much that can be done, and that, too, without any expense beyond that already incurred, and that should be done at once. There is no better road in the world than an Iowa dirt road when it is good. It is smooth, it is easy on the horse, even if sometimes dusty, and its continuance in this state of grace varies with the times ten. All that depraves a country road in Iowa and renders it horrible to contemplate and a source of profanity, both internal and external, is uncon trolled water. Speaking not now of country roads leading to cities, where there is a great deal of heavy hauling, but of the roads for country use, all that is needed to make a road that will be excellent from six to ten months in a year, averaging about nine, is to keep the water from rising up under it, and provide a way for the rain to run off as it falls. The under waters are found where roads cross or follow slonghs. The wet spots, where the most hideous Dish towels and common towels mudholes occur, are on the edges or sides of these sloughs, and are caused by the rain soaking down through the upper fertile soil, and striking a vein of hardpan or impervious clay, and all about it. A pair of white floves or mittens | must therefore come out laterally. The remedy for this is under drainage. eithand hood to keep one from catching so as to catch the water before it reaches the bed.
