Like a Venomous Serpent Hidden in the grass, malaria but waits our approach, to spring at and fasten its fangs approach, to spring at and fasten its range upon us. There is, however, a certain antidose to its venom which renders it power-less for evil. Hostetter's stomach Bitters is this acknowledged and world-famed specific, and it is, besides this, a thorough curative for rheumatism, dyspeysia, liver complaint, constipat on, la grippe and nervousness. In convalescence and age it is very serviceable.

The Teeth.

"Even absolutely clean teeth will decav." said a dentist, "but constant care in this respect greatly prolongs the life of a tooth. The general health usually has a good deal to do with it. People used to think that it was a useless expenditure to have children's teeth filled before the arrival of the second set, but more of them are being educated to the fact that the longer the first set is preserved the better the quality of the second set will be. Every child, as soon as he is able to handle a brush, should have one and be taught to use it regularly."

Not the Expected Answer. Jones asked his wife, "Why is a hus cand like dough?" He expected she would give it up, and was going to tell her it was "because a woman needs him." but she said it was because he was hard to get off her hands" Then the domestic entente cordiale was ruffled.-Boston Globe.

FARM AND GARDEN.

MATTERS OF INTEREST TO AGRICULTURISTS.

upon the imported ones for their trade. The Italians and Germans have created such a demand for them that they are becoming introduced here, and many Americans are taking them up as an that "here is a plant; which in the nitrogen element furnishes the cheapest variety of food known-from which very delicious soups can be made-

their value used up in the cost of transportation.-Michigan Farmer.

Fall Rains.-As a general rule farmers conclude that they have no use for water after the crop is made, but this is a great mistake. It will pay to water lands thoroughly before the fall plowing begins and meadows of all kinds save the clover family should be keptwet right up to the time the ground freezes. This is evidenced from the fact that a good grass crop depends as much on the fall rains almost as it does upon the spring rains. Fall rains are generally indicative . of a heavy snow fall, and the ground when dampened by fall rains holds more snow than otherwise, but these rains are a great thing for the grass crop the coming season. This being the case we naturally conclude that artificial watering of meadows will have the same effect. We have also noticed that fall and winter watered lands produce exceedingly well the following season.-Rocky Mountain Husbandman.

The Vitality of Seeds .- A remarkable instance of the vitality of seeds article of feed. In the south of Europe | comes from Jones county, Iowa, where the lentils are eaten very generally. So Miss Jennie Boncher in the year 1855 distinguished an authority as Edward | made a wreath by using fine wire and Atkinson has said concerning them stringing different kinds of garden seeds on the wire in odd and fantastic shapes. It required a great deal of patient labor to complete the work, and when it was completed she presented

which, when baked, is more delicious it to her aunt, Mrs. Flora Moore, of than the best New England baked Webster City. Mrs. Moore kept the beans-which is a good food and forage | wreath for many years, but some ten or CHONDRILLA JUNCEA

The report of the United States De- been received from Virginia of its agpartment of Agriculture says: This gressive nature, and of the difficulty plant grows to the height of two or of its extermination. It is a native of three feet, having strong, deeply the southern half of Europe and the spreading roots, and slender, twig-like adjoining countries of Asia. Over most stems, more or less branching above of France it is common on sandy soils. and apparently destitute of leaves, or It has not yet entered England and the with a few slender thread-like leaves, other northern countries of Europe. The leaves are mostly in a cluster at and therefore it is not expected that it the base of the stem, where they have will become prevalent to any extent in an irregular jagged shape, much like our Northern states. plant, especially fit for feeding poultry | twelve years ago gave it to her niece, fertile land with the least amount of work.

German lentils are raised, and market gardeners near New York and other large cities raise a few to supply the restaurant trade. These growers are chiefly Germans, who are very fond of and produce flattened pods in pairs, in which are the small seeds. About four grower. The remedy, plenty of potash hundred and fifty of these seeds are with enough water to make it availobtained in an ounce when purchased for sowing. In the south of Europe American Cultivator. the seeds are used largely for soups and the pods also for eating, while the

plants are fed to the cattle. There are several varieties of lentils cultivated. The large German lentil reaches a height of fifteen inches from the ground, and produces pods threequarters of an inch long with a single seed in each one. This is the most productive of all the varieties, but the quality is inferior to many of the oth-

The common or yellow lentil is considered by most as the best in the market. In the markets of Paris it is used delicious.

The green lentil is another fine sort, and differs from the yellow chiefly inthe color of the seeds. The small len- law which requires all imitation dairy til is raised very largely in France by farmers for forage. It is a late kind and grows tailer than any of the other sorts, except the green lentil. When sown in drills, they should be from ten to fifteen inches apart, and the plants four or five inches apart in rows. Nearly all animals like this fodder, especially poultry, and they fatten off it, and increase their supply of eggs. On

playing with his bali, and suddenly came in and sat down to read. His father looked up, and, seeing that Johnnie had his Sunday school book in his hand, thought it time to question him.

"What did you do with the ball?"

"It went over the wall into Mr. Brown's yard." "Did you go after it?" "No. pa." "Why not."

"Because it went through the winemand from the large proportion of low."-Pearson's.

The most painstaking farmer who is not provided with at least a small aplary is guilty of tolerating three serious leaks in the economics.

Leak 1.-The entire removal of all borhood would insure an entire failure of more than one farm crop. Experience has shown this and experiment has proved it time after time. Many garden and orchard products depend almost wholly upon the visits of pollencarrying insects for their fertilization, and some of the field crops are better for these visits. It has more than once been noticed that after a wet season of fruit bloom, when the bees are kept in doors by the rain, there is less fruit and a greater proportion of imperfect fruit. The same is also noticeable in the clover field. This fact has now been so well established and the absence of the bees is so noticeable that in several places where, under the old idea of bees injuring fruit, state laws had practically banished them, a popular clamor has secured the repeal of the laws and the return of the bees.

The fact once established that bees are essential to the proper fertilization of certain farm crops it at once becomes apparent that the farmer who does not himself keep them must depend upon chance or the enterprise of his neighbors for full crops of this kind. Hence, by not providing his own flower fertilizers he is harboring a serious leak in the quality and quantity of both seed and fruit.

Leak 2.- Probably no farm of 50 acres or more is wholly without honey-producing flowers. In some cases the supply would be too small for the bees to be self-supporting. In others a great deal less than 50 acres might produce several thousands of pounds. This at from 10 to 15 cents always obtainable for comb honey, represents an important cash value that may by the keeping of sufficient bees be saved without one particle of extra drainage to land or crop, but that otherwise goes annually to loss. As high as 90 pounds of honey have been made by one colony in 10 days. This, at 12 cents, is over \$1 per day per colony and from a generally wasted source. Of course such runs are not common nor long continued. Still it shows what possibilities are stored up in these honey producers. No grain crop is always profit-

Leak 3, and perhaps the largest of all. -Life on the farm is accompanied by enough privations to warrant every possible effort being made for the fullest possible enjoyment of its advantages. Young people in particular feel country and the farm, their discontent appearing, perhaps, in little outbursts of complaint against the plain fare at table. The remedy is to interest them absorbingly in something pertaining to farm life; not in work, but in something that is really interesting. Nature herself is the very best of compaions from an intellectual standpoint, and she never made a more interesting study of insect life than bee-ology. It is hardly reasonable to expect all to become interested in this subject at once, but many will. Some may first have their interest awakened through the bees themselves; others through a good textbook on the subject. Both should be provided for them as supplements to each other. And in the meantime, will be preparing for the table a very bill of fare.

The greatest leak of all upon the farm is that through which the interest of the sons and daughters pour into other channels. And you who still refuse to provide some of these pleasant sideplays like bee-keeping, may live to see your farm drained of its young blood, a domestic waste, and yourself alone in your old age.-Wilder Grahame in Farmers' Home.

Sauce for Meat.-A delicious sauce to serve with broiled meats and fish requires the tender green heads from a bunch of asparagus, a pint of -which grows on the cheapest or least Mrs. George Nichols. Lately the frame white stock, a slice of onion, a small piece of carrot, a bay leaf, a tiny bit of mace, a sprig of parsley, two generous tablespoonfuls of butter, two of flour, spring Mrs. Nichols, out of curiosity, and sait, and pepper to suit the taste. planted some of the seeds and they are | Put the butter and flour into a saucepan and rub them to a cream, then add the seasoning and stock. Heat the mixture the lentils either served as soup or disease known as "shelling" made its slowly, stirring frequently, and when it fried. Lean and Fat.-Secretary Morton, or the department of agriculture, says that sarkkasm; abuse lands you awa below England pays more for Danish bacon than for Canadian, and more for Canadian than for American-all because the first-named hogs have more lean and less fat. A prominent Wiltshire | di in the gutter. firm offers a premium of 20 per cent on the hundred weight price of hogs 510,321 acres less than that of 1891, and weighing 240 pounds with three inches | ly i have learned to respekt the swell 479.883 less than that of 1893. Barley, of fat on back, for hogs weighing 130 in the kat's back, and the krook in the and hay and hops small decreases, to 199 pounds and with less than two With respect to live stock, it is grati- and one-half inches of fat on any part fying to notice an increase of 7,223, of the back. Under this plan of purthough it is only one-tenth of 1 per chase the percentage of lean hogs has cent, and there is a remarkable in- increased from 47 to 75, and the crease of 20.7 per cent in the number farmers are raising Tamworths and to the exclusion of all others. It has of pigs, but sheep have fallen off in Yorkshires, to the exclusion of Berkshires. The fact is there is a very rapidly growing demand for more streaks of lean in table bacon both in this and in other countries. The premium idea is a good one to increase the lean. Both treeding and feeding are involved in this question.-Ex.

The Coming Sheep .- The size of the coming sheep in this country, from the mutton standard, is defined by the sheep editor of the Iowa Homestead. He says: "We must adhere to the belief that the coming sheep will weigh about 200 pounds in the adult, half of it being gained the first year, and here we are not talking of show sheep. The sheep does come to maturity, generally speaking, much before the age of four years. To England belongs the honor of producing the best mutton sheep on earth, and we would be the last to detract from their credit in this regard. At the same time the results that have been reached to meet English demands will be modified in accordance with our demand when we shall have done our

Removing Grease. - A simple way to remove grease spots from wall paper, caused by the head resting against the wall, is to hold a piece of clean blotting paper over the spot and press a moderately warm flatiron over it. Repeat the operation until the grease is out.

KNOWLEDGE

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy, Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect lax-ative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all dre gists in 50c and \$i bottles, but it is manfactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.
