The Horseless Carriage. The horseless carriage promises to be as pervasive in its social as well as its commercial influence as the bicycle. In Paris, the dry goods houses are all selling the horses that drew their deivery wagons, and using automobiles, and scores of electric dog carts and other horseless vehicles are seen every evening taking their owners out to heir homes in the suburbs, where ands are rapidly going up in value. This is but the beginning of a great popular evolution. The horse in cities s practically forbidden to all but the lich. The horseless carriage is comaratively cheap, and a team fed with oil or napthia, at a cost of a few cents a day, will eventually put a carriage in a park within the reach of any bookkeeper or clerk.

"Well, there's one thing that I know about the convention," remarked Mrs. Snaggs, "and that is that McKinley hasn't got all of the delegates." "No?" replied Mr. Snaggs in an indulgent tone.

The motives which prompt a woman accept a proposal of marriage are often see what will happen next.

> IT'S CURES THAT COUNT

Many so-called remedies are pressed on the public attention on account of their claimed large sales. But sales cannot determine values. Sales simply argue good salesmen, shrewd puffery, or enormous advertis-ing. It's cures that count. It Ayer's Sarsaparilla. Its sales might be boasted. It has the world for its market. But sales prove nothing. We point only to the record of Ayer's merit:

50 YEARS OF CURES.

Prof. Babcock, the well-known Chemist, says:

"I find that Walter Baker & Co.'s Breakfast Cocoa is absolutely pure. It contains no trace of any substance foreign to the pure roasted cocoa-bean. The color is that of pure cocoa; the flavor is natural, and not artificial: and the product is in every particular such as must have been produced from the pure cocoa-bean without the addition of any chemical, alkali, acid, or artificial flavoring substance, which are to be detected in cocoas prepared by the so-called 'Dutch process.'"

Walter Baker & Co., Ltd., Dorchester, Mass.

"How happy could I be with either Were the other dear charmer away."

The ripest and sweetest leaf and the purest ingredients are used in the manufacture of "Battle Ax," and no matter how much you pay for a much smaller piece of any other highgrade brand, you cannot buy a better chew than "Battle Ax." For 5 cents you get a piece of

"Battle Ax" almost as large as the other fellow's 10-cent piece.

Dr. Kay's Renovator CONSTIPATION, DRUGGISTS.

7. The red and yellow coloring matters of canaigre affect the quality of leather produced. The red matters are less desirable and are formed chiefly in the wild crop. They are not present in quantity in cultivated roots. This in rain. Unlike hay, it is independent fact is considered an improvement in of the weather. the quality of the root for tanning pur-

8. The sugar contained in canaigre gives roots and extracts their "plumping" qualities. If properly managed it is a valuable factor in the production

of heavy leathers. 9. Canaigre bagasse, properly prepared, should be about equal to mesquite wood in fuel value. When well rotted it ought also to have considerable value as a fertilizer. It promises

little as a stock food. 10. Canaigre draws heavily upon the soil, especially for nitrogen. Its total drain is about twice as costly as that

11. The utility of canaigre is deminstrated. Properly handled it produces an unusual variety of leathers of excellent quality.

12. The agriculture of canalgre is yet in its experimental stage. A fair estimate shows that it will be necessary to produce an annual crop of about even tons, or a biennial crop of about thirteen tons an acre in order to equal the profits of sugar beet culture. On present evidence this yield seems highly probable, but, so far as known, has not yet been demonstrated.

Little Farms in Japan. The London Times says: "Japan and not France or Belgium, would appear to be the land of petite culture. According to a recent American buletin a couple of acres is considered a large tract for farming purposes. Most of the farms are smaller, and on a little plot a surprising variety of crops is cultivated-a few square feet of wheat, barley, maize and millet: a plot of beans perhaps ten feet wide by twenty feet long, a similar area of potatoes and peas, and a patch of onlons 'about as big as a grave;' beetroot, lettuce, turnips, sweet potatoes and other crops occupy the rest of the area. The farmer examines his growing crops up: if a hill of potatoes or anything else fails it is at once replanted. When he cuts down a tree he always plants another. As soon as one crop is harnured, and forthwith resown to another crop. It is estimated that nine-tenths of the agricultural land of Japan are devoted to rice, and as this is a crop requiring much water the paddy-fields are banked up into terraces, one above another, and divided off into small plots twenty-five feet or thirty feet square, with ridges of earth between them to prevent the water from flowing away when they are flooded. All farming lands are irrigated by a system that is a thousand years old. Some of the ditches are walled up with bamboo wicker-work and some with tiles and stone. According to official statistics, 11,400,000 men and 10,948,000 women-nearly half the total population of Japan-are engaged in agricul-

by the work of women." The question arises, what shall we both get bad the profit is bad. plant? There are so many general kinds of trees and varieties of each

ture. Silk and tes, the two chief ex-

ports of the country, are raised almost

in any other form. 3. The silo preserves absolutely all but the roots of the corn. 4. Silage can be made in sunshine or

5. When corn is ready for the silo there is but little farm work pressing. 6. Corn is worth more to the dairy as silage than in any other form.

7. At least one-third more corn per acre may be fed on silage than on dried cornstalks or fodder. silage than in any other form.

8. Corn is fed more conveniently as 9. Silage is of most value when fed in combination with other food richer in protein. It is not a complete food. 10. Owing to its succulence and bulkiness, silage is the best known substitute for green grass, and is therefore especially valuable as a winter food.

Tobacco Dust As an Insecticide.

Mr. T. Greiner, one of America's leading authorities, says: "For some years have been using and recommending tobacco dust as an all-round insect destroyer. I use it in the greenhouse for the hen-house for lice, etc. It is surely to settle them as the filling proceeds one of the swiftest of all insecticides | till at last the apples are a little above we can apply, almost or fully equal to the top of the barrel. The head is rant bushes the currant worms will curl place by a screw press or lever. Now up and die, and the bushes will be free drive down the hoops and tighten the from the pest within an hour or less. head in place, and nail on a head lining and fall from them for some time. If of a split hoop. blown into the heart of cabbage plants it means the end of the green worm. Applied in the same way to the nests of the caterpillars (and the trees all especially in the morning or evening, when the worms are all at home, it will clear them out for good in less than an hour. In short, I hardly know what vorm or other soft-bodied insect the contact with tobacco dust would not speedily kill. I believe it will even put an end to the potato bug. It is distasteful to many hard shell beetles also, heavy applications we can drive away the cucumber beetle (and perhaps the low prices after the new corn crop has spects his machinery, and if anything is wrong he puts it right. If a weed appears in the bean patch he pulls it tobacco dust must be considered a most tobacco dust must be considered a most excellent insecticide, and as it is not expensive (in some cases, perhaps, the sweepings of cigar factories, etc., will do and can be had for the hauling). I think every soil tiller should keep it on hand. I have usually applied tobacco dust with the bare hands, scattering it rather freely over the bushes and plants, and around cucumbers, melon and squash vines, even an inch deep on the ground. The stuff is worth nearly the full price asked for it (\$3 per barrel. or so) as a fertilizer, and I have not felt the necessity of using it in a particular-

ly economical manner. For cabbage and caterpillar nests, however, hand bellows of some kind are almost necessary, as we want to blow the dust well amongst the leaves and the webs. The ordinary cheap hand bellows, as offered for sale by seedsmen and hard-

less expense than it can be preserved these will have queens not over one year old. It is better to have queens of the current year's raising, but these can only be obtained by taking the second or third swarms from a given hive, which come later and are smaller, or by substituting young queens for

out. Sort them into two or three qualities, and let each barrel be uniform in quality and size throughout. Then take clean, new barrels and pack in the following manner: Place a layer at the bottom of the barrel carefully all one way, for the end that is packed as the lice (aphis), in the open ground for the cucumber bettle, plant lice, and for the same description and same variation and same variations in the barrel and continue in the barrel and worms of all kinds, and sometimes in ety, in the barrel, and gently shake it buhach. If sifted or scattered over cur- now placed on and then forced into

Low Prices for Hogs. This has been a year when ordinary rules and conditions have been pretty around us at this time are full of them) | well twisted around, says Drovers' Journal. We have gone through the season when hogs are expected to advance with liberal supplies, excellent quality and almost record-breaking low prices. The country is bearish on hogs, and it is a question whether this exceptionally down-hearted feeling will not result in some more surprises duras may be seen by the fact that with is a theory advanced that the farmers and feeders figuring on exceptionally winter prices are liable to be better than prices between now and then.

> Dairy Laws Needed .- We have had some good dairy laws, and we want more of them. Some states are well supplied and some are not. In a number of our states there are no dairy commissioners. The great corporations have been able to prevent the making of laws to investigate dairy products and other foods. The states that have the laws have found the dulteration so universal, that it is perfectly plain why the great manufacturers and wholesalers oppose laws for the protection of the people.

Irrigating Fruit Trees.-In a recent paper Professor E. W. Hilgard, of Callfornia said that much water makes fruit too aciduous and of poor quality says an exchange. If there is too little water the fruit will be dry and small The thing to be avoided is to not irrigate too much. If the ground is scaked all the season, the roots run near to the surface, and a drought would probably kill the tree. Irrigation has much to do with the flavor of fruit. Fruit men should study the nature of the soil, and irrigate accordingly. As soon as fruit is fully formed, irrigation should be decreased, as the tree seeds reet as well as everything elec-

those that come with the swarms. Packing Apples. A subscriber asks us to tell him how to pack apples so that they will arrive in market in good condition, says Southern Planter. Good packing, although essential to good selling, is not the only essential. Before the apples are packed they should be carefully gathered, not shaken from the trees, but hand picked. They should then be laid for a few days in heaps to sweat and then be carefully graded, sorted, and all defective or specked ones be taken
