GOOD SHORT STORIES FOR THE VETERANS.

The Awful Threat Made by Ge Toombs How Gen. Winfield Scott Quietly Converted the Georgian Into A Laughing Stock-The Rebel Flag.

Crowds thrilled

AJESTIC stream along thy banks silent, stately, solemn ranks, The forests stand, and seem with

To gaze upon thy mighty tide; As when, in olden classic clir Beneath a soft, blue, Grecian clime, Bent o'er the stage, in breathle s awe. and trembled as they

Sweep by the pomp of human life, The sounding flood of passion's strife, And the great stream of history Glide on before the musing eye. There, row on row, the gazers rise; Above, look down the arching skies; O'er all those gathered multitudes Such deep and voiceful silence broods, Methinks one mighty heart I hear Beat high with hope, or quake with fear E'en so you groves and forests seem Spectators of this rushing stream. In sweeping, circling ranks they rise, Beneath the blue o'erarching skies; They crowd around and forward lean As eager to behold the scene-To see, proud river! sparkling wide, The long procession of thy tide-To stand and gaze, and feel with thee All thy unuttered ecstasy. t seems as if a heart did thrill Within yon forests, deep and still, So soft and ghost-like is the sound That stirs their solitudes profound.

Toombs' Threat. From the Chicago Times-Herald: When General Robert Toombs of Georgia was a young man in his twenties he raised a volunteer company and joined General Scott, who was then conducting a campaign against the Indians in Florida.

Even in his early youth Toombs was noted for his self-confidence and his ggressive bearing.

He was without military training, and had never submitted to rules and discipline, at college, or anywhere else. The youngster had an imperious will, and regarded no human being as his superior. Naturally, when he met General Scott

t was a case of oil and water—they would not mix. Private James White, who served in

a Georgia company during that war, laughs to this day over a tilt between Captain Toombs and General Scott. The general knew the character of his red enemies, and he was in no hurry to attack them in the position which they had chosen. He waited day after day, determined not to move forward until he was satisfied that he would be successful, and would not uselessly cause the sacrifice of many valuable

The delay did not suit the Georgia captain. He fretted, fumed and swore, and did not attempt to conceal his contempt for the slow methods of his com-

One night Toombs felt that he could stand it no longer.

The indignant captain paid a visit to he general's tent, where he found Scott engaged in a pleasant conversation with a dozen officers of high rank. The Georgian was a man of superb

physique, the finest looking American of his generation, and when he marched into the tent with flashing eyes and a defiant look everybody gazed expectantly in his direction.

General Scott greeted him pleasantly and invited him to join the circle of military men who were telling stories of camp life.

"General Scott," said Toombs, in a stern tone, "I desire to know, sir, whether the army will march against the enemy within the next few days." firearms into Europe is of comparaquestion," replied the general with a quent among the Mohamedans of east-

o go forward with my company into the very heart of the Indian territory." When this astounding declaration was made the officers almost fainted. and they expected the general to administer a withering rebuke.

To their astonishment Scott never hanged his genial expression. His ipon his audacious visitor.

"Very well, captain," was his quiet row and march into the Indian coun- golf course. ry. We may follow you a few weeks night, captain."

Knits Under a Rebel Flag.

There is an old woman in Charleston who has not been on the Battery since the war and has not been on King street in fifteen years, says the Char- field strawberries and brought back a leston (S. C.) Post. This may seem small cup half full. "Oh, mamma," he like a fairy tale to many, but it is a said, "there were bushels and bushels true statement. She is not a cripple, of berries, but I picked them all."either, but is as well and strong as a Youth's Companion, woman could expect to be who has reached the age of 74 years. She lives Horseshoes which can be attached to in the western part of the city within the hoof without the use of nails have a few squares of King street and near a broad steel band attached to the the Rutledge avenue street car line. front and sides of the shoe, ending in Another remarkable thing about this screw sockets at the rear to draw old lady is that she has never seen the band tight over the hoof by means of electric cars and has no desire to see screws inserted in the rear of the one, she says. She was asked by a shoe. friend of hers the other day to join in

asked to take a trolley ride, "do you FARM AND GARDEN. think I'd get on one of those cars that are run by electricity? I could not be induced to take one of those electric rides. You are fooling with something

you can't see." As before stated, the old lady has not been on the Battery since the war. and, notwithstanding repeated efforts have been made by friends and relatives to get her to visit this beautiful place, all appeals fell on deaf ears. She would reply when asked: "Thank you. I do not care to go."

Other than this no excuse was ever offered. Oftentimes she has been asked by her friends why she did not care to go on the Battery or why she had not been there since the war, but never a reason did she give. The old lady is a genuine rebel and says she has never surrendered and never will. In her house is a large Confederate flag suspended from the wall in her room and it is said she sits under it hours at a time and knits stockings.

To Make Smooth Bore Cannon Effective. A most ingenious method has been devised by Colonel W. H. Bell of San Francisco for the effective restoration of smooth-bore cannon, this invention as claimed, securing the necessary rotary twist in the air without the trouble of being fired from a rifled gun. and there is no liability to tumbling. In shape the device for accomplishing this purpose is that of an ordinary conical shot, and in its bore is a hollow capable of holding a considerable quantity of slow-burning powder; a plug screws into this hollow, holding the powder securely within. Around the edges of this plug are a series of grooves leading into the powder chamber, and bored at an angle opposite the direction in which the projectile is expected to twist, and thus hores its way through the air, doing this on the same principle that makes the "pin wheel" revolve when it is lighted. A charge of quick-burning powder is dropped into the smooth-bore cannon, and the projectile is pushed in upon it; the fuse is attached and the cannon fired-the quick-burning powder expelling the projectile and lighting the slcw-burning powder through the grooves. This beins to act at once, accelerating the speed and initiating the twist even before leaving the cannon. The speed is said to actually increase while the projectile is in the air, and until the powder is burned out the rotary motion continues to accelerate the ball.

British Sailors in India, This picture shows the kind of work

plague segregation camps in India. Here is a Barria being disinfected before being allowed to return to his home in Karachi. Two stalwart gunners assist him in his toilet, and a doctor is in attendance to see that he is fit to be discharged. The man's bodily condition is evidence of the good living he has enjoyed while in segregation. Probably this is the first bath he has had in many years, as men of his caste are very dirty.

The Use of Muskets.

While the introduction of portable "I am not ready yet to answer that tively recent date, their use was freern Asia at a very early period. La "Then, sir," continued the youthful Brocquiere, who made a journey to captain, "I will notify you that unless Jerusalem in the middle of the fifteenth northern Delaware the best results the army marches tomorrow I propose century, and who traveled etxensively with the cherry will follow a location in the east, mentions the firing of small that retards the period of blooming, a harquebuses at the great festivals in slope to the west or northwest, as an

AGRICULTURISTS.

Some Up-to-Date Hints About Cultivation of the Soil and Tields Thereof-Horticulture, Viticulture and Flori-

E recall that, in 1882, when hops were very scarce, and when we were paying for them ten francs per kilo.,and even more, our brewers searched in every direction for cheaper hops. Orders were then specially sent to Poland, from which country we received

some hops of very ordinary quality, at prices not more than half those which were being charged for the inferior qualities produced in other countries. The situation is now entirely changed, as it is not uncommon, to-day, to find Polish hops quoted at very high rates. It is true that considerable plantations have existed in Russia for a long period, but their product has been little known, and has been in small demand because the drying and curing were far from what was desirable. During the past twelve years or so many improvements have been effected. The Russian government, seeing the profits which would accrue to the country by the adoption of a more rational and more careful system, has supported the efforts made by the planters, with the object of obtaining a product resembling the fine qualities of Germany and Austria. The first Warsaw hop company, whose collection of samples is shown in the brewery section of our international Exhibition, were among the earliest to take advantage of this incouragement given by the support of he government, and have rendered important service to the hop culture by ngaging experts from abroad, and by ntroducing on a large scale the cultiration of plants obtained from Bonemia and Bavaria. After careful exumination of the samples resulting rom these replantings, we are able to tate that they now correspond very learly with the actual Bohemian or Bavarian growths. The total producion of hops in the world in 1896 mounted to 1,650,000 quintals. Rusia's contribution to this figure was 3,000 quintals and her export of hops n 1896 to the different European states | tions in dietary matters, in an article eached 21,000 quintals, being an in- printed in a Paris journal, considers rease of 2,500 quintals upon the pre- the hygienic value of the fruits, says clous year. The Cherry Orchard. ment station treats of the cherry. In

part it says: Soil .- The cherry will thrive in a vaiety of soils, but it reaches its highest development in one naturally light, dry and loamy; in a soil retentive of moisture, but which never "sours." The sweet cherry will flourish on soils too dry for other fruits, but the sour varieties require more moisture to develop their best cherries. The orchardist must have recourse to underdraining if the soil is not naturally dry, but on light dry knolls, otherwise favorable to cherry culture, the moisture content and the moisture-holding capacity of the soil can be increased by the addition of vegetable matter, and by judicious surface cultivation. The writer has in mind a knoll in eastern New York, ideal for the swet cherry, but which was too dry and thin for the growth of the trees. The mechanical condition of the soil has been changed by turning under crimson clover, and by frequent cultivation to a deep retentive loam, adapted to the highest development of the fruit in the dryest

Location.-It is probable that in exposure to the south would hasten the development of the buds in spring, and endanger the crop from the late white frosts. The Sorghums in Kansas

In 1893, when the first returns of the

con-saccharine sorghums in Kansas

were made to the State Board of Agriculture the area planted to milo maize was 14,004 acres, Kafir corn 46,911 acres, and Jerusalem corn 17.027 acres. In the four years since, according to a press bulletin issued by Secretary F. D. Coburn, milo maize has fallen 25.5 per cent in acreage, and Jerusalem orn 50 per cent, while the increase in Kafir corn has been 692 per cent, 324,838 acres. The counties in 1893 having 1,000 acres or more of Kafir corn were Neosho, leading with 2,832 icres; Clark, 2,480; Comanche, 2,405; Haskell, 2,005; Ness, 1,716; Greenwood, ,627; Dickinson, 1,549; Stanton, 1,321; Gray, 1,263; Morris, 1,218; Meade, 1,210; Ford 1,171; Grant, 1,150; Lincoln, 1,099, and Ellis, 1,044, or fifteen counties all told. This year there are 71 counties with 1,000 acres and upwards, ranging from 1,128 acres in Graham to 22,256 n Greenwood. This year's area is 71,838 acres. The leading counties are Greenwood, with 22,256 acres; Barber, plant become that it is grown in every county, and, except in a very few, its acreage is of considerable importance. If the total increase in acreage during the past four years was equally apportioned there would be 3,093 acres increase for each county in the state. During the four years from 1894 to per cent. The total this year is 352,528 acres. The county having the largest planting is Barber, with 13,183 acres, followed by Finney, 11,873; Ottawa, 9,930; Reno, 9,082; Russell, 8,883, and Dickinson, 8,269. Sorghum is grown in every county; the great bulk of the saccharine sorghum now raised in the state is for forage and grain; not at all for sugar-making, and only in a small way for syrup. While stock growers are pretty evenly divided as to which sorts are of greatest value for their purposes both the sweet and the nonsweet are rapidly gaining in popularity and becoming important factors their business.-F. D. Coburn.

Hygienic Value of Fruits. Dr. Dupoury, a French physician,

celebrated for his scientific investigafruit into five classes, each of which ing cherries, strawberries, raspberries, Madison, 2409 42d Ave., Chicago. Ills. gooseberries, peaches, apples, lemons, and oranges, he accords great merit. Cherries, however, he prohibits en-Bulletin 35, of the Delaware experi- tirely to those affected with neuralgia of the stomach. Strawberries and raspberries he recommends warmly to those of bilious, plethoric and gouty temperament, and denies them to those to whom diabetes is present or suspected. Of the sweet fruits he considers that plums are of a special hygienic value, and even a preventive in gout, and, particularly, rheumatism. To the grape he accords the very first place. He is an ardent advocate of what in Europe is called the grape cure. In this cure grapes for several days form the exclusive aliment. The patient commences with the consumption of from one to two pounds daily, with a gradual increase to eight or ten pounds daily. After a few days of this diet a marked improvement in the general health is noticeable. The appetite improves, the digestion becomes easy and rapid, and increased capacty to withstand the fatigue of outdoor exercise is noticeable. The grape cure s particularly recommended to the anaemic, dyspeptic and consumptive. in diseases of the liver and in gout.

Some interesting experiments on the effects of weather on plants are given in a little work by John Clayton, an English naturalist. Twelve bean plants were placed in the ground so that onehalf of them would receive all the sunshine of the day, while the others rewas continued in succeeding years. All seeds were planted under the condishade-grown ancestors flowered but Distance of Trees.-In thirty years failed to mature fruit. Measurements winter were also made. The two to three-sixteenths of an inch, and of oaks from five to six-sixteenths of an inch, less in February at a temperature of 3 degrees Fahr, than in October, after growth had ceased, and the trunks expanded to their original size on March 2, at a temperature of 39 degrees. The frequent splitting of forest trees is due to this contraction by cold.
