FARM AND GARDEN

leine Up-to-Date Blats About Cultivation of the soil and Tiesel Floriculture.

Around the Farm. fast harvest, owing to the wet weather, a tertain flat in one of my fields was 50 wet as to Measurably drown the oath which were bown upon it. There were more of less bats, however, all through it, and a huge crop of sour grass and various sorts of weeds. I cut and stacked it. Today the stock prefer it to bright, threshed timothy. I had sown the flat to timothy and clover and wanted the land clean, which was the chief reason for mowing the mixed oats, weeds and sour grass. I

The blanket of snow has prevented the ground from freezing to any ex- the plow along; this not only adds latent. Hence fence posts can be driven with less labor than in the fall. The cracks through the fields made by the drouth I see are closed; and the ground is damp a foot down or more. This is heering, for the cracks prevented the flow of water to the reservoirs. In my opinion the wide-awake farm-er will keep over a few hundred bush-

els of corn, at least until he is reason-

ably sure of another sufficient crop. There has been a slaughter of rabbits this winter beyond any other season within my knowledge. The taste for fried bunny is on the increase among the people. I am glad of it. It will save blackberry gardens and young fruit trees, for, singular as it seems, many farmers neglect the ounce of preventive so long in such matters that they are compelled to use the pound of cure. The only objection any farmer can have to gunners hunting rabbits in his fields is, he don't want them to kill his quails, and he wants them to be careful about shooting towards stock. A neighbor had two valuable Angora goats killed this winter by careless

In an adjacent neighborhood I am credibly informed that some sort of a pest is killing off the rabbits; that many dead ones are daily found. It may be they are mistaken. The dead

cash for land. They are willing to hive of bees on that tree so long as it ing above corn and oats, sur of visiting the model seven-acre garerto. Some are now willing to give at its roots. He thinks there is enough by one Donald Ross, a typical Scotchman, and as whole-souled, good-na- half the crop. The rule hitherto for honey left to winter the bees, and that tured old gentlemen as you often some years has been two-fifths in the next year they will go to work and fill meet. He gave the Yankees each a bushel and crib and half the hay. That the empty combs. But it is very poshearty handshake as we were intro- is what I have rented for a number of years past. I have made careful estimates and find that, one year with another, I have done as well, and sometimes better, than those who have rented their land for cash. I have had us that he cleared from \$800 to \$1,000 one renter seven years, and he has done tables, flowers and plants. We here as well by his portion of the farm as state that we never before saw such a I myself would have done. The great trouble with many renters is they hog the land over. It runs down under their hands. The fences, the house, the barn and the door-yard and orchard look as if a very poor widow lived there and had no help whatever. This kind of farming makes the owner harder in his demands than he would be if the renter took a little pride in keeping bage, 4 cents each; green corn, 25 the place in good condition. I have no cents per dozen; tomatoes, \$1.50 per use for a slovenly renter.

bushel: potatoes, 25 to 30 cents; cauli-EDWARD B. HEATON. flower, \$1 per dozen; cucumbers, 15 cents per dozen; strawberries, 25 cents Training Grape Vines. per box; squash, 4 cents per lb., and E. G. Lodeman, Department of Agria hot-house 12x180 feet, heated by a culture Report: Training, on the other hand, is almost wholly a matter of furnace by means of flues. One man beside himself attended this garden, convenience. It does not affect the except at time of gathering the crop.' strength of the vine or the value of Agents of the Canadian Government the crop in any essential particular. are now located at different points in The training of a vine refers to the disthe United States, and using their efposal or arrangement of the various forts towards securing settlers on the parts of the vine after pruning has fertile lands of Western Canada, to taken place. The method of training adapted determines the operator to Why isn't the bookkeeper's lunch tions, not because more or better fruit is expected, but for the reason, per-Take Cascarets Candy Cathartic. 10c or Sc. If C.C.O. fail to cure, druggists refund money. haps, that the fruit may be harvested with greater ease, that a laborious operation may be wholly dispensed with, A correspondent of the London Spec or that there may be less danger to the tator tells this story to illustrate the maturing crop from winds or other natbiting humor of the late Charles Peiural agencies. The method of training ham Villiers: "The anecdote," h says, "must be reproduce! with unothographic exactness. Half its point would be lost if it were translated into he queen's English. Mr. Villiers had been asking a radical elector to suport him. 'Yes, I'll support you. But Wilars, we must have a diwision of propty!' 'Certainly,' replied the diplomatic candidate; 'I should be quite in favor of such a measure. But I am afraid that if the property is divided there will not be enough for you and me and the rest of us.' After a momentary embarrassment the cheerful have not always been sufficiently emand resourceful socialist hit on a remphasized. A vine properly trained is edy: 'Why, then Willars, we must di-

adopted by a vineyardist is largely the result of personal preference or of education, although soil and variety are system. The health and vigor of the vine are rarely affected by the method in which it is trained, and although some system of training must be adopted in every vineyard, still altogether too much weight has been laid by most horticultural writers upon the peculiar merits of the various systems, while the actually ruinous effects of bad pruning desirable, but a properly pruned vine is essential to the highest success. The importance of this subject necessitates a somewhat detailed statement of the principles which are vitally connected with the proper pruning of the vine. These principles serve also as the foundation for all systems of training and they can not be ignored without more or less injury to the plants. (1) The amount of fruit which a vine can bear and mature in highest perfec-

tion is limited; when this limit is exceeded the fruit deteriorates. (2) Upon the fruit the effect of overproduction is to reduce the size of the is small and the vigor of the plant is A Canadian traveier who has spen: a couple of years in the far northwest, part of the time along the Peace been allowed to overbear, especially when it is young, years may someriver, says that there are in that countimes be required before the vine returns to its normal condition.

(3) A plant that is carrying less fruit than it is capable of maturing generally produces a very heavy foliage and an excess of wood. This may probably be explained by the supposition that the energies of the plant are di-

to judge of the kind and amount of main upon the plant. This amount is clusters are covered with a bag and sedependent upon soil, variety, climate, character of the season, and to a limhaving a properly balanced top and _Oklahoma Farmer. root system is most fully realized by American vineyardists of long experience. Years of study, especially the lasy man should get rich rais... the soil upon which it is growing, are brought to bear upon each individual vine when it is pruned, and in no direction can the skill of the vineyardist be more clearly demonstrated than in enestions regarding the amount and kind of bearing wood that is allowed to remain. No rule-of-thumb will cov-

the grape-vine; in pruning judgment must be exercised at almost every step But it is fortinate that considerable MATTERS OF INTEREST TO variation may be allowed without sorious tonsequences or the profitable culture of the grape would indeed be a hopeless task. Yet the less the reliance placed upon this allowed variation the better will be the vine.

The Plow Team In working farm teams, either for plowing, cultivation of the land, or hauling heavy loads, there are at least two prime requisites demanded for in-suring satisfaction to the driver and the greatest amount of ease and com-fort to the horse, days Indiana Farmer, First, they should be evenly matched as to size, speed and spirit, and in the second place, the harness and whiffletrees must be so balanced and adjusted to the load that an even pull will bear equally upon the weight to be drawn. The average plowman is liable to overlook the importance of this equal adjustment system, and it is shall never despair again of getting not uncommon to see the end of the some good out of even a first-class double tree to which the furrow horse stand of weeds. lower than the other as the team pulls bor and friction, but it throws the funning of the plow out of balance, making it harder for the plowman and impossible for the best class of work to be performed. The whiffletree, or as they are known to some, the doubletrees, should be level when the pull is on and not cocked up at one end, atwist as is too often the case. It can all be obviated by a proper adjustment of the harness and by using the larger horse, if there is a difference in size, in the furrow; the lowering or raising of the traces at the breechings and backband

as the occasion requires will do it. Getting Wild Honey. The usual way when a bee tree has been found is to cut it down, stupely the bees with smoke as well as may be, and take their honey. This, of course, lestroys all future harvests of sweet from that tree or swarm. Possibly Daniel Johnson, an old bee hunter, of Dedham, Me., has discovered a better way. The bees provided against their tree being cut down and their stores destroyed by selecting a tree which overhung a deep ravine. If the tree were cut down it would fall into the ravine, smashing the tree and destroying the honey. So he inserted a gas pipe from a hollow near the ground, running it up the tree until the honey sible that heat sufficient to melt honey

comb has killed the bees, and that the barrel of honey this year is the last he will get from that tree. No advice, however good, can take the place of experience. There is no way that the novice in poultry keeping can become efficient except by experience. Many people think they have experience, but later find to their cost that they had not obtained for a number of years, has a little touch of poultry diseases, cures the troubles with ease and imagines that he knows all all about them and that he can fight off anything that comes. When any of his neighbors has a like trouble he cheerfully gives them his advice and knows, or thinks he does, that if they follow the recipes they will have no further trouble. But later he finds that he knew less than he supposed. One of the same diseases attacks his flock again. He tries the old remedies and finds they will not check this new invasion. The enemy comes on fearlessly and creates havoc in his yards. He now gets a little more experience and perhaps comes down to the old remedy

the hatchet. Thereafter he says that there is no cure for this or that disease. Is he right? Who knows? We leave certain growths in certain posi- all need more experience and more systematic investigation. Canada Thistles. Any reader of The Farmers' Review oblige G. L. Having several patches of these plants in a pasture of two hundred acres. We know those thistles to be rich in sugar; cut, too, within the spring cattle prefer them as fodder better than rank grass. We have known and grass growing together cut with a scythe in mowing will make excellent hay for cows, increasing their flow of milk: that produces sweet butter. The dry spines being sharp, are very disaeeable to bare hands. When stacked large barns the saccharine matter weats vigorously and sometimes fires the stacks by spontaneous combustion. the sod containing thistles is then broken by plowing, planted with potatoes for two seasons thistles are destroyed. In Great Britain many persons use them for edible greens, before cabbage comes. RICHARD BAKER, JR.

Place for the Incubators.-A cellar is an excellent place for an incubator perature, especially if the cellar is one that will preserve roots and fruits, but the atmosphere should be pure, which will be the case in winter. The suffering and pain endured by some working women is almost past belief. Here is a letter from one of the multitude of women who have been restored o health and usefulness by Mrs. Pinkham's advice and medicine: DEAR MRS. PINKHAM: - I feel as though your advice had lifted me from the

grave. I must have been very near it. I suffered terribly at time of menstruation, was constantly troubled with cold hands and feet, was extremely nervous, could not sleep well, was troubled with frightened dreams, had heart trouble and a feeling as though my breath was going to stop, also had leucorrhœa. I tried to get help but all remedies failed, until I wrote to you. I cannot thank you enough for your kind advice, and I wish to tell every one the great

good your remedies have done me.-TANNA C. HOOVER, Wolfsville, Md. Lydia E. Pinkham's Vegetable Compound for a quarter of a century has been helping women to be strong and well. The following statement from Miss H. PATTERSON, of 2531 Lawrence St., Philadelphia, Pa., should interest all working

women who are troubled with female complaints: "DEAR MRS. PINKHAM:-I must write and tell what your medicine has done for me. I am a working girl and have to stay at my work all day. I suffered greatly with bearing-down pains and backache. I was advised by a friend to try your Vegetable Compound. I did so and can say positively I am eured. I have recommended your medicine to all my lady friends, and would advise any of my sex suffering from female weakness to give Lydia E. Pinkham's Compound a trial, for I know it will cure."

Mrs. Pinkham invites all women troubled about their health to write to her at Lynn, Mass., and secure her advice free of all charge. All such letters are seen and answered by women only.
