Two Interesting Buildings. Pictures of two interesting Baltimore and Ohio Railroad buildings bave been reproduced in a recent issue on arrival of trains from Baltimore the railroad. The other building is the station at Mount Clare, Baltimore, and it is noted as being the location of the first telegraph office in the world. It was from this building that Professor Morse sent his celebrated

THE MAJOR'S EXPERIENCE. From the Detroit Free Press.

One of the staunchest supporters of the deep-water way from the Great Lakes to the ocean is Major A. C. Bishop, of 715 Third Ave., Detroit, a civil engineer of wide experience and considerable promi-nence in his profession. He was assistant engineer on the Hadson River Railroad in 1860 and has since conducted large engineering operations. He has been located in Detroit since 1815, and has a large acquaintance among the business men and citisons of this city.

Two years age, for the first time, Major Rishop was in the hospital. For two months he had the best of medical attendance but when he was discharged he was not like the Major Bishop of old. When asked fegarding his bealth, he said: "When I had my last spell of sickness and came out of the hospital I was a sorry sight, I could not gain my strength, and could not walk over a block for several weeks.

deal of importance to the farmer and yet no analysis can tell exactly what a soil will do or what it most needs.

Don't forget that man's chief end Storage of Celery. A report of the Maine Experiment Station says: If on well drained soils. celery plants may be left in the rows till the last of November, by having some litter at hand to apply in case of hard freezing. It should be remembered, however, that if the plants are well banked a little freezing of the tips of the leaves will do no harm. and the mistake is often made of applying winter protection too early and thus injuring the crop by keeping it too warm. For winter storage the method in vogue in some celery growing districts is to make, on welldrained soils, beds of four to six dcuble rows of plants with a wall of dirt between. Bank up on the outside till the tips of the leaves just show above the surface of the bed. Leave the bed in this condition till hard freezing begins, then throw two or three inches of soil over the surface. Let this soil freeze hard before applycover at the first at fall of snow.

boards between them. When plants ac generally.—Elgin Dairy Report.

hasten the process of blanching, the temperature of the place may be raised. The soil in which the plants are placed should be kept moist to prevent wilting, but the foliage should ilways be kept dry, or there will be trouble from rotting.

The mushroom season has opened with a good supply of this delicious vegetable. Years differ very greatly in this respect. During the last five years we have had three mushroom seatons. They were 1894, 1896 and off years, so to speak. The lack of to develop. At least this was the condition in Northern Illinois, and we presume the same was true over a wide extent of country. Good rains are necessary some weeks before the fruit of the mushroom appears, for the plant itself is of slow development.

It would be of value to our readers if they would educate themselves on the wild mushrooms. At present Agaricus Melleus is growing in large quantities in the vicinity of Northern Illinois and we doubt not throughout described in a report of the Department of Agriculture for 1891. It is a honey colored mushroom of great pro-

Artificial Lakes on Farms. We have noticed in some parts of Illthe water becomes stagnant and foul. rapidly and the possibilities of disease are greatly increased. It would be better to build fewer artificial ponds and have them more sanitary in con-

The desideratum is to produce a pond in which there will be a current of water. In such farms as we refer to it will be found impossible to produce such ponds without going outside of the natural resources of the pasture. In many townships there are no brooks is merely a masquerade suit. that run throughout the year. The dependence in such cases must be placed in a wind-mill, and this is the reason why fewer and better ponds should be constructed. A wind-mili will not give much of a stream, it is true, but it will

becoming entirely stagnant. It will take some study to make the water run through the whole pond, but this can be accomplished by placing obstructions in the way of the current. continually deflecting it. Where there are low swales it will not require much of a lift to get the water to the top of the ground. This will increase the amount of water that can be pumped. If gravel and sand be near and plentiful, it might be advisable to use some of it for the bottom and sides, as that would probably have some influence on keeping down the growth of slime in the ponds. It would be also well to suggest that the hogs be not allowed to divide the possession of this pond with the other stock. The hogs seem to do more than any other animals to strawberry. It is our experience that keep such places in an unwholesome

of Sydney, New South Wales, calls attention to the decrease in merino wool in that part of Australasia, and the relative increase of crossbred wools.

degrees of cross existing that the old New England type of wool seems in danger of losing its identity altogether. Many selectors have actually bred from crossbred rams. Result, chaos, some of the progeny going back to strong wools, chers tending to fine, and the greater majority being nondescripts. . . . It is stated that 65 per cent of the sheep in the Argentine Republic are now crossbreds, and about 75 per cent of the New Zealand sheep are cither crossbreds or long-wools. Consequently the man who breeds for a crossbred wool abandons the class of staple which can be grown nowhere to such perfection as in Australia in favor of a commoner grade which is being produced in immense quantities of all patents issued since 1850 to date in various other parts of the world."

Destroying Wheat Smut.-The best ing litter, and never apply heavy method for destroying smut in Utah is weather. The soil in the bed is still and lime water just before time for warm, and if a heavy coat of manure sowing.
