

# A UNITED STATES SENATOR

SAYS THAT PERUNA, THE CATARRH CURE, GIVES STRENGTH AND APPETITE.

Hon. W. N. Roach, United States Senator from North Dakota.

Hon. W. N. Roach, United States Senator from North Dakota, personally endorses Peruna, the great catarrh cure and tonic. In a recent letter to The Peruna Medicine Company, at Columbus, Ohio, written from Washington, D. C., Senator Roach says:

"Persuaded by a friend I have used Peruna as a tonic, and I am glad to testify that it has greatly helped me strength, vigor and appetite. I have been advised by friends that it is remarkably efficacious as a cure for the almost universal complaint of catarrh." W. N. Roach, Larimore, North Dakota.

No other remedy can take the place of Peruna.

Mr. Ed J. Makinson, contractor and builder, 510 Grand Block, Wash street, St. Paul, Minn., says:

"Many doctor bills can be saved by the use of Peruna. I have all my friends taking it for catarrh of the bladder, and I have heard nothing but praise for it. Last fall I had a bad cough. I took four bottles of Peruna and I am cured. I am inclined to recommend it to all my friends. It is a great relief to me. I have had it for years. I am now 185 pounds, and I believe it is Peruna that has given me such good health. As a result of the changeable climate, catarrh has become one of the most prevalent and universal diseases known to man. Nearly one-third of the people of the United States are afflicted with catarrh in some of its many phases and stages. Add to this the fact that catarrh rapidly tends to become fixed or chronic, and the further fact that it is capable of producing a great many other diseases, and we begin to realize the true nature of this dread disease.

So formidable has catarrh become that in every city or town of any size numerous doctors are to be found who make the treatment of catarrh a specialty. Of course a great deal of good is accomplished in this way, but as yet a comparatively small number of the people can avail themselves of this treatment because of the great expense necessarily attached to it.

To all such people Dr. Hartman's remedy, Peruna, comes as a great boon. Not only is it more successful in curing catarrh than the treatment of the catarrh specialists, but it is within the reach of every person in this land. Peruna can be bought at any drug store, and is a remedy worth equal for catarrh in all forms, coughs, colds, bronchitis, consumption, and all climatic diseases of winter.

Peruna is not a guess, nor an experiment. It is an absolute, scientific certainty. Peruna cures catarrh wherever located. Peruna has no substitutes—no rivals. Insist upon having Peruna. Let no one persuade you that some other remedy will do nearly as well. There is no other systemic remedy for catarrh but Peruna.

Mr. Byron J. Kirkhoff, attorney, 691 Gates ave., Brooklyn, N. Y., writes from 691 Gates ave., Brooklyn, N. Y., the following:

"I have used your Peruna for catarrh and find it a r a t i v e cure. It cured me of a very bad attack and though I suffered for years I feel entirely relieved, and it will benefit others, I gladly give it my endorsement." B. J. Kirkhoff.

"I have used your Peruna for catarrh and find it a r a t i v e cure. It cured me of a very bad attack and though I suffered for years I feel entirely relieved, and it will benefit others, I gladly give it my endorsement." B. J. Kirkhoff.

Address Dr. Hartman, president of the Hartman Sanitarium, Columbus, Ohio.

## FARM AND GARDEN.

### MATTERS OF INTEREST TO AGRICULTURISTS.

Some Up-to-Date Hints About Cultivation of the Soil and Yields Thereof—Horticulture, Viticulture and Floriculture.

#### Experiments with Wheat.

At the Ontario experiment station tests with wheat have been a prominent part of the work. Some of the results are reported on as follows: The average of several years' results from seeding at different dates shows that the grain which was sown on or before the ninth of September gave a considerably larger yield of both straw and grain than the average sown after that date. The very best yields were obtained from the wheat which was sown in the last week of August.

An experiment with different preparations of winter wheat land has been conducted to duplicate each of four years. The average results in bushels of grain per acre of the eight tests are as follows: Twenty tons of farm-yard manure per acre on bare summer fallow, 40.5; crop of peas plowed under, 36.1; bare summer fallow, 23.2; crop of buckwheat plowed under, 23.4. These results show that peas give much better results than buckwheat when used as a green manure on land to be used for winter wheat.

In an experiment conducted during the past year in growing wheat on grass sod and on clover sod it was found that the former yielded 23.2 per cent less in yield of grain per acre than the latter. Ten plots were used for the experiment. The crop of both grass and clover was removed from the land in 1899, after which the land was plowed and the wheat was sown in the first week of September. The experiment will likely be repeated for several years.

In each of six years an experiment has been conducted in duplicate by sowing winter wheat broadcast and with a drill. The results from sowing the same quantities of seed by the two methods are very similar, the yields per acre being practically equal. It should be understood that the land was in a good state of cultivation when the seeding took place, in every case.

In order to find out the influence of cutting wheat at different stages of maturity upon the quality of the grain for seed purposes, samples were taken from the crop cut at different dates, and these samples were carefully sown upon separate plots. In the average results of these tests made with two varieties in each of five years, it was found that the heaviest yield of grain per measured bushel, and the largest yield of grain and straw per acre, were produced from seed taken from the crop which had been allowed to become very ripe before it was cut.

#### Horticultural Observations.

We notice in a contemporary a recipe for sulphuring apples, by which method they can be kept without canning. In brief, the plan is to put the pared and quartered apples in a barrel in which is to be burned a cupful of sulphur. Until further advised our readers should beware of the proposed sulphuring fruit in the hands of medical authorities and is considered bad food. Canning and drying give healthful food products and these processes should not be abandoned for one that gives questionable results.

Now is the time to be preparing for the early radishes and lettuce. To have them early increases their value to the eater. By growing them in a hot bed they can be placed on the table from four to six weeks earlier than if grown in the open ground. Make the bed on the top of a raised building, where it will receive all of the sunlight possible, and where it will get little wind. The manure bed may be made in a pit or on a level and covered with a few inches of good loam. The glass should be of course sloped toward the south to catch the sun and turn the rain. The radishes can be sown in drills or broadcast, but must be thinned to give room for development. Good radishes must be grown rapidly to be tender.

Grape growers have generally paid little or no attention to the question of cross-fertilization of grapes, believing most grapes to be sufficiently fertile to give a good yield of fruit if other conditions were favorable. Some of our stations have taken up the question and have found that the varieties differ greatly in this regard, some being self-sterile, others only partly self-sterile. The self-sterile varieties should not be improved by planting them together, but may be improved by planting them near the self-fertile. However, little definite information exists on this point, and it is evident that a great deal of experimental work must yet be done to give us light on the subject. Very marked results have already been secured, indicating that a variety which is more or less incapable of fertilizing itself generally fails in the fertilizing of other self-sterile varieties, while on the other hand the self-fertile varieties have usually been successful in fertilizing the self-sterile sorts upon which they have been tried. Further investigation is necessary to determine whether any grape may be more successful in fertilizing some varieties than others.

#### Sheep Notes.

Fergus County, Colorado, has been wrested from the cattlemen by the sheep raisers and the former have been compelled to close their stock. Fergus county is credited with more sheep than any other county in the state, 650,000 to 700,000 being considered a conservative estimate of their numbers.

George Taylor says: "I have found that a little grain of any kind, say a half bushel for twenty-five or thirty sheep, once a day during the winter, is a great help towards making both flesh and fleece and good strong lambs in the spring. Feeding ewes wheat should be avoided after lambing or the lambs will scour. I have found the feeding of oats highly satisfactory at any time. I do not think any domestic animal will respond so readily to a little extra feed and care as sheep." The Navajo Indians of Arizona are a material factor in the wool market. The tribe is wealthy through its flocks. The tribesmen are believed to own the stock of about 1,000,000 head, the care of the flocks and the wedding of wool being almost the sole occupation of the 22,000 Indians. Singular to relate, only a small part of the Navajo wool is worked up at home into the wonderful blankets that have made the tribe famous. Only the coarser and cheaper blankets are now made of the native wool. A sheep raiser says: "As soon as the lambs are weaned and the ewes

are dried the old ewes should be culled out and sent to the shambles as soon as they are ready. When one has his flock well established and he can afford to cull severely, he ought to do so. In such instances there is no gain in keeping tag grade sheep beyond the age of five years for breeding stock. It is better that they are now well fitted to nourish their young, nor do they fatten as well when they are being prepared for market."

#### American Horses in Germany.

Germany is one of the countries in which American horses have obtained a footing, and the effect upon horse growing there is described in the Hamburger Nachrichten as follows:

Importations from America have caused the horse raisers of Holstein to suffer much of late. A stock company has just been formed in Berlin for the express purpose of importing horses from the United States. The American has succeeded in breeding a horse which compares favorably in every way with the Holstein animal, especially in those points so highly prized in a work horse—namely, broad hips and large build generally. The best markets for Holstein horses have always been the provinces of Saxony, Thuringia and Brunswick. The demand is created by the large sugar factories. This market has been decreasing of late, owing to American horses being purchased in Berlin. A few days ago this Berlin company shipped a drove of eighty through Hamburg on route for Milan, Italy, where they are to be used on the tramways. Almost every week a long freight train filled with American horses leaves the Berlin Bahnhof for various parts of Germany. In spite of expensive freight and a tariff of \$7 per head, the Americans have built up a reputation as competitors in the German market.

Reports from American consuls, both in Germany and elsewhere in Europe, indicate that the conditions described in the foregoing extract are becoming the prevailing ones in many other foreign markets, as well as those of Germany.

#### At the Tennessee Dairy School.

Geo. W. Markham, writing to the Farmers' Review from the Tennessee Agricultural College, says: "Early in the year 1901, I began January, 1901. There were about thirty-three students at the opening, and some have come since. Much prominence is given to dairying, although all the subjects taken up seem to be very carefully considered. The dairy building is a model of the best of its kind, and is well supplied with a large variety of milk testing, cream separators, cheese making outfits, together with all the other necessary machinery and fixtures required. All the students working in the building are uniformed in white duck suits of their own make and businesslike appearance. We are divided into squads and on different days have instruction in running the boiler and engine, milk testing, churning, and the manipulation of the several types of separators. In fact, there is no subject in dairying which is not taught for the city trade and in the making of cheese. For myself, I have been on churning, butter making, milk testing, boiler and engine, etc., and I have found out that one practice period on churning extending from one o'clock in the afternoon until five o'clock has taught me more than I ever imagined there was to know about this subject. All the students are delighted with this work and every one is surprised at the vast amount of information required to run a dairy properly."

#### Cattle at Chicago.

The receipts of cattle at Chicago during the week ending January 26 were 4,500 head, or about 4,000 more than the best grades of cattle average 50 cents lower than the same sort brought one year ago. On the bulk of sales the difference amounted to 25 cents in favor of the local dealer. The close of the week the export trade was rather dull, there not being sufficient foreign demand for cattle at prices that would afford a satisfactory margin of profit. The total receipts of Texas cattle were the same as the receipts of the week before, but the young cattle in the hands of dealers at the close of the week was the smallest in four months, not over 1,000 all told, and those not of the sort that are most attractive to feeders. The demand earlier in the week was sufficient to take the best of the week, high-class feeders bringing \$4.40 to \$4.50. Common steers and plain heifers brought \$2.75 to \$3.25. There is said to be a considerable demand for good, well-bred heifers at the latter figure, but common ones are slow sellers. The offerings of milk cows were more numerous than during the previous week, but prices remained about the same. Good to choice cows are in strong demand at \$4.00 to \$5.00, plain to fairly good ones bring \$2.50 to \$3.50.

#### Woods in the Garden.

Weeds injure growing crops by appropriating the available plant food, by removing water from the soil, and, in the case of the weeds, by excluding light. While a soil may be very fertile, there seldom is present enough plant food, in the form necessary for the use of plants, to support a crop of weeds and a crop of vegetables. The weeds, therefore, usually do the greatest injury by removing from about the roots of the crop the water needed by it. Not only do weeds require water for their increase in size, but water is continually evaporating from the surface of their leaves. While they may shade the surface of the soil so as to check evaporation, the evaporation from their leaves is much more rapid than it would be from the surface of the unshaded soil, if it were properly cultivated. Thus, the destruction of the weeds by cultivation not only curtails the loss of plant food and of water, but the process produces all the desirable conditions of the soil mentioned above.

#### A Chicken's Estimate Foot.

The mechanism of the leg and foot of a chicken is of a most interesting and a marvel of design. It often seems strange that a bird will sit on a roost and sleep all night without falling off, but the explanation is simple. The tendon of the leg of a bird that roosts is arranged so that when the leg is bent at the knee the claws are bound to contract and thus hold with a sort of a death-like grip the limb around which they are placed. Put a chicken's foot on your wrist and then make the bird sit down and you will have a practical illustration on your skin that it would be bound to hold on. By this singular arrangement, seen only in such birds as roost, they will rest comfortably and never think of holding on, until it is impossible for them to let go.

#### "The New Oldies."

The successor to the place of oldest living graduate of Yale is Judge J. W. Cutler, of Watertown, Conn., born in December, 1807, and graduated in 1829, who has served five terms in the Connecticut house of representatives, and 24 years as probate judge, retiring at the liminary period of 70 years.

#### A Dismissal Post.

A New York police commissioner declared the other day that it was easier to hang a man for murder there than to dismiss a policeman. "Last year," he said, "the board had to pay out \$100,000 in back salaries to men who had been reinstated by the courts."

#### Biggest Scales on Earth.

At the Washington navy yard the government has the largest pair of scales in existence. They will weigh anything up to 150 tons and, what is equally remarkable, they will accurately register the weight of objects so light as a single pound.

#### Well Paid Janitors.

The school commissioners of New York City have just made public the list of janitors of school buildings for the coming year. It appears that the average pay of janitors is about one-third greater than the average pay of teachers in the public schools.

#### A WISE DRUGGIST.

For \$2.00 He Guarantees to Do That for Which a Lady Offers Him \$100. Kansas City, Mo., Feb. 25, 1901. (Special)—Some two years ago a local druggist engaged in a transaction which was in its details somewhat remarkable. He was visited by Miss Anna F. Nichols, who had a doctor's prescription for rheumatism, which the druggist was filled in the course of conversation the good lady said: "I would give one hundred dollars to get well."

He immediately replied: "Give me five dollars and I will guarantee to cure you."

She agreed, and he at once handed her a box of Dodd's Kidney Pills, saying: "They are 50c a box. Two boxes may cure you, but I am quite sure that ten will."

Miss Nichols tells the story as follows: "Dodd's Kidney Pills are veritable life preservers. I was troubled for five years with Rheumatism, so that at times my right arm seemed paralyzed and I could not go out of doors if the air was damp or cold. I took so much medicine that I think my system was poisoned rather than helped. One day when my druggist was putting up a prescription for me I remarked to him that I would give one hundred dollars for a remedy that would make me better."

"Give me five dollars and I will guarantee to cure you," he said. I readily agreed and he handed me a box of Dodd's Kidney Pills, saying, 'They are 50c a box. Two boxes may cure you, but I am sure that ten will.' I left my prescription intact and, instead, took these Pills, and I found, before I said before, a veritable life preserver. Before I had finished the second box I had my first peaceful night's rest in years. I gradually improved. I had determined to use the ten boxes before I would give up, but imagine my surprise to find that before half the quantity was used I was completely cured. This was two years ago, and I have not had a twinge since."

Miss Nichols is Vice Grand Barter, Rebekah Lodge I. O. O. F., and is one of the best known and most highly respected ladies in Kansas City, and her experience will be read with interest by her many friends.

Dodd's Kidney Pills never fail to cure Rheumatism. They are 50c a box, six boxes for \$2.50. Buy them from your local dealer if you can. If he cannot supply you, send to the Dodd's Medicine Co., Buffalo, N. Y.

#### Senatorial Fads.

Several United States senators are base ball enthusiasts. Among these Mr. Clark of Wyoming is one of the most ardent, while Senator Malloy of Florida was once catcher on the Georgetown college nine.

#### You Can Get Allen's Foot-Ease Free.

Write to-day to Allen S. Olmsted, Le Roy, N. Y., for a FREE sample of Allen's Foot-Ease, a powder. It cures sweating, damp, swollen, aching feet. Makes new or tight shoes easy. Cures itching, burning, and most-bites. At all druggists and shoe stores; 25c.

#### Twelve Ex-Governors.

Vermont invites inspection of her twelve ex-governors as examples of how conducive the state's cold winters boys have always been long lived. They don't run to flesh, but they last.

Among every 70 births there is a pair of twins.

Trade returns show that Canada imports three times as much from Germany as she exports to that country.

#### The gloomiest mountains don't cast a shadow on both sides at once.

There's Got Foot-Ease! Get FOOT-EASE. A certain cure for Swollen, Smarting, Burning, Itching Feet, Corns and Blisters. Ask for Allen's Foot-Ease, a powder. Cures Frost-bites and Chapped Hands. At all Druggists and Shoe Stores. Sample sent FREE. Write to Allen S. Olmsted, Le Roy, N. Y.

#### In the ladder of success there are many rounds of failure.

There's That? We Offer One Hundred Dollars reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

Dr. J. C. HENNEY & CO., Props., Toledo, O. We have the best in years and believe him to be the only one who has cured Catarrh and instantly able to carry out any obligations made by their firm.

Gratitude is a vice that renders all others less disgusting.

It requires no experience to dye with PUTNAM FADELESS DYES. Simply boiling your goods in the dye is all that's necessary.

Champion Smoker. Judge Ray, one of the New York delegates in congress, is said to be able to smoke a cigar faster and to smoke more cigars in a day than any other congressman. He never neglects an opportunity to smoke.

An educational departure in Wisconsin next summer will be the opening of a summer school at the state university for apprentices and artisans. It will be for the benefit of machinists, carpenters, or sheet-metal workers; stationary, marine or locomotive engineers; shop firemen and superintendents; and men engaged in water works, electric light plants, power stations, factories, large office and store buildings in cities, and for the young men who wish to qualify themselves for such positions.

Among the most furious election bets on record is one made by John P. Courtney, Democrat, an attorney and business in Minneapolis. The agreement was that the loser must for his life cast his vote as the winner shall dictate. Courtney, who was a candidate for alderman in the recent campaign, was the loser and is now engaged in earnest but so far unavailing efforts to substitute some other penalty. Wallace is obdurate and swears that Courtney must in future vote the Republican ticket.

Seven joints were closed in Great Bend, Kas., by officials as a result of demand by citizens.

# CUTICURA

## Burning Scaly

### Itchings

#### Complete External and Internal Treatment

# Cuticura

## THE SET \$1.25

Consisting of CUTICURA SOAP to cleanse the skin of crusts and scales, and soften the thickened cuticle, CUTICURA OINTMENT to instantly allay itching, irritation, and inflammation, and soothe and heal, and CUTICURA RESOLVENT to cool and cleanse the blood, and expel humor germs. A SINGLE SET is often sufficient to cure the most torturing, disfiguring skin, scalp, and blood humors, rashes, itchings, and irritations, with loss of hair, when the best physicians, and all other remedies fail.

### WONDERFUL CURE OF PSORIASIS.

As a sufferer for thirty years from the worst form of Psoriasis, finally cured by Cuticura Soap and Cuticura Ointment, I wish to tell you my experience, that others may benefit by it. I was so grievously afflicted that the matter that exuded from my pores after the scales had peeled off, would cause my underclothing to actually gum to my body. After remaining in one position, sitting or lying down, for an hour or two, the flesh on my elbows and knees would split, so thick and hard would the crusty scales become. The humiliation I experienced, to say nothing of physical agony, was something frightful. The detached scales would fly from my face from my coat sleeves. I have read none of your testimonials that appear to represent a case so bad as mine. But as to the cure. I commenced bathing in hot Cuticura Soap suds night and morning, applied the Cuticura Ointment, and then wrapped myself in a sheet. In two weeks my skin was almost blood red in color, but smooth and without scales. Patches of natural colored skin began to appear, and in less than a month I was cured. I am now passed forty years of age and have skin as soft and smooth as a baby's. Hoping that others may benefit by my experience, and regretting that sensitiveness forbids me from disclosing my name, I am yours gratefully, J. H. M., Boston, Mass., Sept. 30, 1900.

### Millions of People Use Cuticura Soap

Assisted by Cuticura Ointment, the great skin cure, for preserving, purifying, and beautifying the skin, for cleaning the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for detaching, whitening, and sealing red, rough, and sore hands, for baby rashes, itching, and chafing, and for all the purposes of the toilet, bath, and nursery. Millions of Women use CUTICURA SOAP in the form of baths for soothing irritation, itching, and excoriation, or for free or offensive perspiration, in the form of washes for milky weakness, and for many sensitive anti-septic purposes which readily counteract the action of soap and especially mothers. CUTICURA SOAP contains delicate emollient properties derived from CUTICURA, the great skin cure, with the purest of cleaning ingredients, and the most refreshing of perfumes. No amount of perspiration can induce those who have once used these great skin purifiers and beautifiers to use any other, especially for preserving and purifying the skin, scalp, and hair of infants and children. No other medicated soap is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines in One Soap at One Price, the BEST skin and complexion soap, and the BEST toilet and baby soap in the world. Sold by all druggists.
