Went Bravely to His Death. "In the four years I served in the army of northern Virginia," said the old confederate, in a reminiscent mood, while chatting with friends in a Louisville hotel, "I saw more men youthful freshness of his voice. killed than I'd care to count. In the course of the war three out of the four men who were tent-mates with me of the river and echoed back from the were killed. Each one went down within ten feet of me, one with his head torn away with a shell, the second with a minie ball that tore a great hole in his jugular vein, and the third from an overdose of bayonet, when he got at close quarters with the Yankees at their quarters. one afternoon at Seven Pines. My command lost 58 per cent in one battle, and as we usually came pretty near evening things up with the other fellows I have been a witness at a pretty

dustry says: When it is known that blackleg occurs with more or less regularity in a pasture, feed lot, or stable,

leasures Against Blackleg.

it is due to the presence of the blackleg germ, either in the ground of these places or in materials (coarse feed, etc.) brought there regularly. Whenever an animal becomes affected, the germs multiply by the million in its system, and their liberation, through natural or artificial means, tends to preserve, increase, or spread the infection. In the large pastures of the West and Southwest an affected animal is rarely noticed until after death, when the swarms of buzzards or other birds of prey indicate that there is "something dead," and an investigation is made. It is then frequently too late to attempt to prevent the spread of infection, for wolves and other vermin usually attack the carcass in short order, without even waiting for the animal to die, and only the bones and pieces of the hide are found scattered.

## WESTERN CANADA'S DECEMBER WEATHER

That of Max In To the Editor:-Thomas Regan and

C. Collins of Eden Valley, Minnesota went out to Western Canada last Decamber as delegates to look over the grazing and grain lands that are being flered at such low prices and reasonable terms. This is what they say: "Wearrived in Calgary about the 20th of December and although we had left winter in Minnesota and Manitobe, we were surprised to find beautiful warm weather at this point, quite equal to what we have in May in Minnesota. There was no snow nor trace of winter to be seen, and the climate was really splendid. Horses, cattle and sheep were running out, in prime condition, with plenty of feed on the prairie, and really better than that of ours

stabled in the south. We are impressed with this country as one of the finest mixed farming countries we have ever seen. The immense tracts of fertile lands well sheltered and abundantly watered leave nothing to be desired.

"Leaving Alberta we returned east and visited the Yorkton district in Assinibola. We drove out about ten miles at this point and were highly pleased with the splendid samples of grain we were able to see wheat yielding 25 bushels, cats 60 bushels, Roots were also good specimens. From what we have seen, we have decided to throw in our lot with the Yorktoners-satisfied that this part of the country will furnish good opportunities for anyone anxious to make the best of a really good country."

"Any agent of the Canadian governmanifested itself by the appearance of ment, whose advertisement appears elsewhere in the columns of your paper will give you full particulars of the new districts being opened out this year in Assinibola and Saskatchewan. Old Reader. Yours truly.

'Itolfowed Mrs. Pinkham's Advice and Now Lam Well."

A woman is sick-some disease peculiar to her sex is fast developing in her system. She goes to her family physician and tells him a story, but not the whole story.

She holds back something, loses her head, becomes agi-tated, forgets what she wants to say, and finally conceals what she ought to have told, and this completely mystifies the doctor.

Is it a wonder, therefore, that the doctor fails to cure the disease ? Still we cannot blame the woman, for it is very embarrassing to detail some of the symptoms of her suffering, even to her family physician. This is the reason why hundreds of thousands of women are now in correspondence with Mrs. Pinkham, at Lynn, Mass. To her they can give every symptom, so that when she is ready to advise them she is in possession of more facts from her correspondence with the patient than the physician can possibly obtain through a personal interview.

Following we publish a letter from a woman showing the result of a correspondence with Mrs. Pinkham. All such letters are considered absolutely confidential by Mrs. Pinkham, and are never published in any way or manner without the consent in writing of the patient; but hundreds of women are so grateful for the health which Mrs. Pinkham and her medicine have been able to restore to them that they not only consent to publishing their letters, but write asking that this be done in order that other who suffer may be benefited by their experience.

fair share of violent demises. But there is one incident that happened near the end of the war that keeps coming back to memory, and every time I think of it I wish I had been somewhere else on the morning it happened. You know, near the close of the war, the poor, half-starved devils got to deserting pretty frequently. It was war and there was but one way to remedy it-a wooden cross, the deserter and the firing squad. One morning I left my command and started over to talk to some old friends in a Mississippi regiment. I got about half of the distance when I ran into a little body of men. Two of them had their eyes blindfolded and their arms tied behind them. The first fellow couldn't

have been more than 25. He was tall, straight as an arrow, with dark, curling brown hair, and his face was the handsomest and the saddest I ever saw. He was walking quietly and steady. I couldn't see his eyes, but not a muscle of his face was twitching. and his feet were planted fairly and squarely on the ground. I noticed that he wore the uniform of a captain. The second fellow had to be held up by four men. Every few steps he would fall to the ground perfectly limp, and,

it seemed, lifeless. When the men would get him up he would scream and cry like a scared child. He was a great, big, raw-boned North Carolinian, and his terror would have been disgusting if it had not been so pitiable. I a great many questions about telefollowed the little procession for 100 graph lines. His mother told him that yards to where the line of crosses stood. The captain was to be shot first. As they placed him with his back to the cross he said: 'Men, you know me. I've led you in thirty fights, and you've never seen me shy from a gun muzzle yet, have you? I just want you to take this bandage off my eyes, and as long as I've got to die let me die like a man. I've given you the order to fire many a time, and I'd like to give my last order, if you'll let me.' The lieutenant hesitated, and then he said, 'Jack, I'll do it, if I get shot for it.' They unbound his eyes. He straightened himself for a minute.

took a long look all about him, and then facing his men said, in as steady a voice as I ever listened to, 'Ready! Aim! Fire!' They fired, and he pitched straight forward his full length. dead before he struck the ground. Then they tried to bind the Tar-heel

to the cross, but he writhed and moaned and twisted away from it like a snake with a broken back. They gave it up and he was shot while he was crawling along on the ground,

screaming out prayers for mercy. I heard afterward that the captain. hearing that his mother was dying. had asked leave to go to his home. which was only twelve miles away. We needed every man then, and the permit was refused. He slipped away, but before he got back Grant made one of his attacks on our lines. The captain's

company went into action for the first time without him at the head of it. He returned for a court-martial. Deserting had become too common for any excuse to be taken for it, and he was ordered to be shot the next morning. By some chance a detail of his for the horses and four men to work

The cause of the "wilt" disease of cotton, which has been more or less destructive during the past two or three seasons, is a fungus which attacks the plant from the soil. It first enters the small roots and subsequently grows into the tap, or stem. The result is that the supply of food and moisture carried up from the roots is greatly decreased. W. A. Orton of the division of vegetable physiology and pathology, United States department of agriculture, says that land once infected with this disease has never been freed from it.

Systematic protection of the forests against fire is an issue before the New Jersey legislature. The total forest area of New Jersey is more than 2,-000,000 acres, which is believed to be larger in proportion to its size than that of any other middle state. The proposed preventive measures will follow the general lines of a suggestion made by Gifford Pinchot, an authority on ferestry, which involves a system of fire lance, to be patrolled daily by
