Yet, with the was about a fortnight ago, and before present significant increase of inter-Mr.-well, we'll call him Jenks-set est in suburban affairs, with the presout for it he promised Mrs. Jenks sol- ent rapid extension of the garden cult emnly that no matter what the others among those who work in town, and did, he would drink nothing but who live at least in the edges of the charged water and lemonade. Mr. city, there is bound to be a revival of walking very carefully and sedately. useful business of dwarfing trees.

At the present the pear is the only fruit grown to any extent in the dwarf form. A few growers have orchards of dwarf pear trees reaching commercial proportions. These are most numerous in southern Michigan. Another and more considerable number of pear growers have been planting new orchards of standard trees with use rows of dwarf pear trees between the standards, with a view of getting ting them out before the standard trees needed all the space. Apples are still occasionally grown as dwarfs. though we have never heard of a single instance in which they have been Other trees, such as plums, peaches, well stop trying to light the hot water apricots and cherries are almost totally unknown as dwarf.

The dwarf fruit is secured by a combination of two processes-propaga-HIS GREATNESS NOT VISIBLE. tion and pruning. The tree is first propagated upon some slow growing root. which tends to dwarf it-that is, to "stunt it"-and then it is pruned back Sir R Farrant tells a good story severely, and not allowed to fill a apropos of the late Lord Rowton's great space. This second part-the personal concern in the comfort of pruning-is quite essential with many the houses which bear his name.
