STOMACH ON FIRE OFLY A SKELETON CROUCHING BY A STOVE.

firs. Doherty has an Extraordinary Exriunce and Undergoes a Marvelous Change.

Mrs. E. Doherty, of No. 115 Coates street, Moberly, Mo., is today a picture of robust health, and yet five years ago, she part of the apparatus which is visible barely escaped death from progressive is a small metal disk through which enaciation. To a reporter she told the the air enters. following story :

"In 1896 I began to have distressing ettacks of indigestion that continued for two years. My stomach was constantly sore and burned as if it was on fire. It became finally so delicate that it would not retain even plain water. My inability to take food reduced my weight to ninetyeight pounds, and faintness and dizziness kept me in bed most of the time. I was really starving to death and besides I was extremely nervous. The doctor was perplexed. He gave me tonics which did me no good, and prescribed exercise fit for the gods."-Lewiston (Me) Journal. which I was too weak to attempt.

"One day when I was so faint and chilled that I could do nothing but crouch down on the floor by the fire, my father brought me a box of Dr. Williams' Pink Pills for Pale People. I found on trial that they would stay on my stomach unlike everything else. I really felt better them. Food began to taste well and to stay down. The pain and the burning Boston Transcript.

HARVESTING AND STORING OF SEED CORN. Mr. Geo. A. Wells, who is secretary

of the Iowa Grain Dealers' Association has received the following letter from Prof. Holden of the Department

of Agronomy of the Iowa State Agricultural College and we append the following questions and the answers that Mr. Holden gives.

We deem this circular letter to carry with it great weight as Mr. Holden is authority on this subject, and as we are now soon to commence the

harvesting of one of the largest corn crops that lowa ever produced it is quite timely that the subject of seed corn harvesting and storing should be discussed.

"Replying to your questions of Where and how to select seed corn and where and how to store it,' will say that owing to the cold season and

corn has matured this fall, the greatest possible care should be exercised by every farmer in the selecting and storing of his seed corn.

> have the seed thoroughly dry before the bitter cold weather of November.

"One of the safest methods is to select the seed corn from the earliest planted field, not later than Oct. 15th. taking the most mature ears. Tie eight or ten ears together in a string with binding twine, or tie them in pairs by the husks and hang on some wires in an open shed where the sun

portunity to blow through the corn

STOCK RAISING AND FERTILITY.

Nearly all of the best apples and We often hear people say that live stock cannot be raised at a profit on high-priced land. One hundred dolthe Northwest, are home grown seedlings of quite recent origin. This fact lars per acre is high-priced land. High-priced land cannot remain highshould be very encouraging to the one who is willing to plant seeds, espepriced unless live stock is a promicially apple seeds. The Iowa State nent feature of the farm, says Farm Horticultural Society has \$1,000 hung and Ranch. Some years ago New up as a prize for the party who will England farmers came to the conproduce a tree as hardy and producclusion that land was too dear for stock raising, and they quit the stock tive as the Duchess. bearing fruit equal to the Wealthy in quality and business and engaged in special crop appearance and which must keep as farming. The result was povertywell as the Melinda. The prize hangs stricken farmers and abandoned high, but some one will bring it down farms all over that section. They thought that with special crops and with an apple seed. We should test chemical fertilizers they could do betthe possibilities of more fruit seeds; ter than by raising live stock, but maybe that coveted, prize-taking seedling is growing, or can be grown, they made a fatal mistake. The chemical fertilizers gave heavy yield for a from seeds now maturing in your orfew years, and finally they refused to chard. Again, these hardy little seedlings are producing the ideal "take hold" and the soil became bar roots for grafting and budding. The ren. good circulation of air and where i will be somewhat protected from the November and December, such as the attic or furnace room. If you are certain that the corn has thoroughly jury, if the paper is not removed in to them and the laws. These fellows dried out, it might remain where it was hung in the open shed all winter, provided the sparrows and the mice need more or less repairing every do not trouble it and there would be each spring. Lath and cornstalks are no danger of injury from freezing. excellent materials for wrapping But in slow cold seasons like the past and the present, or where the corn was not hung up before Oct. 15th, the only safe thing to do is to take the

corn down and place it where it is protected as stated above. "In a slow season the corn contains

much more moisture than is generally supposed. Last fall on Oct. 25th, 6,000 pounds of corn were placed in a crib and have been weighed each week since. It has now lost 1,830 pounds or 30.5 per cent. It is impossible for such corn to dry out sufficiently to prevent its being weakened or killed by the fall freezes." Cautions.

"1. Do not store seed corn over the stable as it will gather moisture. "2. Do not put freshly gathered seed corn in a warm room. It will

either sprout or mold or both. "3. For the same reason do not leave it in barrels and boxes or on the south porch where the sun can shine on it.

"4. During the first two weeks after the seed corn is harvested, while it is green and sappy, it should be dried under as nearly normal conditions of temperature as possible. After this the drying may be hastened by placing in a warm but well ventilated place.

"5. Do not take any chances with he seed corn. "6. Save two or three times what

you will need for your own use. Your neighbor may need it next spring.

"7. Last spring thousands of farmers planted weakened seed. This together with the cold spring gave poor stands and necessitated much replanting. Over a thousand samples of corn were sent to the station to be tested last spring. The tests showed an average of 18 per cent that would not grow and 19 per cent more that gave a weak germination amount of moisture in the air, the and was not fit to plant, leaving only presence of clouds and the elevation 63 per cent of strong seed. of the field all have their effect. "I would again emphasize the importance of harvesting the seed corn not later than Oct. 15th, and hanging where there is the freest circulation

of air with a normal temperature. "Yours truly, "P. G. HOLDEN."

The principles we have always followed is that when hogs are ready to go let them go, writes an experienced breeder. The higher the price the more profit can be made in feeding heavy hogs, but we would not think of growing hogs over 250 pounds unless we had no youngsters coming on.

We believe that when hogs are 4 cents and under the proper weight at winch to sell them is 175 pounds; when they are 5 cents, 200 pounds;
