FOR CHICKERS IN WINTER

Defy the Cold. F. V. G .- I would like to learn how to proceed to build a concrete house for little chickens in winter. I usually keep about 200 chicks on hand; selling them at about three months old.

The chicken house represented in the accompanying cut is 12x24 feet; it is 5 feet high on the south side and built of concrete, the walls being The se should have read, 'object "to'

land cement being used instead of lime in the plaster. By using Port land cement in the plaster the chick fourteen inches in diameter, giving floor is of concrete and a wooden ens will not pick the plaster off. The floor is laid on top of it. This will keep the rats from getting under the floor or troubling the chickens in ary

be 10 barrels of Portland cemest making the concrete one of cement to nine of gravel, 9 days' labor for one man and 12 yards gravel. The other material and labor would amount to about \$14 for lath and plastering and \$27 for windows, door, roof and labor. The inside can be sheathed up with matched stuff if desired instead of giving the working stroke. The exbeing lathed and plastered, but the haust valve then opens to allow the walls can be more easily kept free burnt charge to escape, completing from vermin if plastered. In order to get the sunlight into the chicken house, the windows should not be more than one foot from the floor, if higher than that the rays of the sun will not strike the floor as it should. The walls are built between planks. This is done by standing 2x4 inch

uprights every three or four feet, both
