I think there the crowds that are at all times as sembled around the exhibits. Men who never handled a gun, gentle ladies and timid children are among the most interested of the spectators. These once terrible but now harmless creatures appeal to us as a living menagerie behind secure iron bars does. Yet the animals in the game display possess one advantage over those in the cage. They are quite as safe, and they are in their natural setting.

One of the most popular groups is the bear's raid on a honey tree. The mother bear, holding tight to the hol low trunk with her sharp claws, is defying the swarm of angry bees while she drops the sections of rich comb down to her expectant cubs. The situation is one that appeals to every child. For some unexplained reason the bear is the first animal to invade the nursery. He is on the second page of the "A B C" book. The boy who wishes to frighten his little sister invariably plays he is a bear, and the bugaboo that gets bad children is sure to be a bear. The place that honey occupies in the childish mind is too well established to be questioned.
