At Platte Center the boys had a banner in a conspicuous place with the words "We will Remember the Court Heuse Gang on Election Day' in large letters, to remind the crowd of their lack of patriotism in taking the crowd to Humphrey and from Platte Center. Hessian Fly.

Although the Hessian Fly proved to be less destructive to small grain than had been feared in the early spring a sufficient number of the larvas have matured nevertheless, and have gone into the "flax seed" stage to make precautionary measures necessary at this time, if we would be perfectly certain that no harm shall come to the grain sown this fall. Since the insect lives over summer in the stubble and issues sufficiently early in the fall to deposit eggs on early sown grain, it become necessary to destroy it when yet in the "flaxseed" stage. This can be done by either burning the stubble or plowing under thoroughly and deeply during the present month. Every farmer should accordingly see to it all stubble of wheat, barley and rye

is thus treated before the flies can issue. If this is universally done throughout the fall wheat region, the insect can be almost entirely destroyed in a single season. Cooperation, however, is absolutely necessary and if the work must be done before the flies issue, as suggested above. Late planting is also recommended where this can be done without fear of interference by an early winter. Lawrence Brunner,
