Varsity-Varsity, Nebras-ka.

CHEMISTRY NOTES.

Robert Hiltner, of the Chemistry department, has recently returned from a week's trip in the Black Hills in the interests of that department. He brought with him a large number of choice and valuable specimens of minerals and metallurgical products which will be placed in the chemical museum.

In addition to this he also gathered a large amount of gold and silver ore about the Portland and Homestake mines for use in the assaying classes.

The collection includes specimens from the Portland cyanide mill of Central City, S. D., and from the mills of the famous Homestake mines which show the details of process of extor-tion of metal. The result, as a whole, of Mr. Hiltner's trip was very satis-factory.

A new assaying furnace has recently been placed in the assaying depart-

ment which is much of an improve-ment over the old one and will give the students more practical assaying work.

It is of the type of what is known as the double muffle furnace which is used in all large commercial laborator-ies of the west.

The plan of the chemistry depart-ment is to make other practical and needed improvements as fast as money and space will allow.

Richard Adams, commonly known as "Richard" the colored janitor of the chemistry building, has severed his connection with the University and will occupy himself elsewhere. Mr. Adams is probably the oldest man in point of janitor service in the Uni-versity, having served for about ten years.

Misses Mildred Parks and Grace

Montgomery are now assistants in freshman laboratory.

There is a large colony of University people in the Black Hills country.

Everett Sawyer, '98, and Mark E. Hiltner are situated at Central City with the Portland Cyanide company.

Miss Helen Gregory is superintendent of the Hearst kindergarten school at Lead City, S. D.

Mr. Griggs, '98, is superintendent of the cyanide mill at Yellow Creek.

Bruce Yates, '92, is civil engineer of the Homestake Mining company.

Henry Tucker, '98, is teaching in the public schools of Lead City.

There has been an unusual demand

on the department of chemistry this fall for sugar analysts for the various beet sugar factories.

Mr. Hiltner has succeeded in findin places for all the men who have ap-plied for work of this sort.

As a result, Herman Miller and Y. Nikaido are at Leavitt, Neb.; John Sherrer is at Chino, Cal.; Otis Hymer at Grand Island, Neb.; Paul Wolfe at Caro, Mich.; Clarke Streeter, Arthur Strahorn, Walter Hiltner and Ernest Birdge will test the product at Nor-folk.

Clarence C. Fletcher, '92, is head chemist this year at the factory in Loveland, Colo., and Roland V. Balle, '93, is superintendent at Fremont, O.

Empire State of the South.

Georgia enjoys the complimentary sobriquet of the "Empire State of the South," from the fact of its natural wealth and superior advantages in in-dustrial and manufacturing lines.
