

The Daily Nebraskan

VOL. I. NO. 26.

THE UNIVERSITY OF NEBRASKA, OCTOBER 22, 1901.

THREE CENTS

TRAINING TABLE STARTED

Football Squad now Eats at an "Official" Table—Team Getting into Shape Again—Scrubs Cross the Goal.

As a result of the wealthy condition of the athletic treasury, Manager Cowgill has established a training table at the Lincoln. The following men are eating there: Cortelyou, Bender, Westover, Brew, Kingsbury, Koehler, Stringer, Ringer, Pillsbury, Crandall, Shedd, Geo. Shedd, Bell, Drain.

The Varsity lined up last evening for the first time since the Minnesota game. Captain Westover and Drain were not in moleskins, but followed the plays over the gridiron. Coach Booth was not out, being in Fairbury coaching a high school team. The playing was good considering that the men have not played for a week. Pillsbury and Stringer did some encouraging foot-work, kicking with accuracy and precision.

The Varsity and scrubs lined up yesterday. The Varsity scored in four minutes after pretty team work. Stringer kicked goal. Bender played quarter, Crandall and Eager halves.

The scrubs scored about five minutes later on a fumble at the kick-off. They succeeded in getting the ball on Nebraska's twenty-five-yard line and steadily pushing it over for a touch-down. MacDonald kicked goal.

The Varsity scored again about ten minutes later. Bender kicked goal.

Y. W. C. A. NOTES.

A slight change has been made in the regular Wednesday meetings of the Y. W. C. A. Henceforth they will be led by some one of the members instead of an outside speaker. They will be held as hitherto in the association rooms on Wednesdays from 1:15 to 1:45 p. m.

Considerable disappointment is expressed by the young ladies at the news from Miss Sophia B. Lyons that she cannot come to the University as secretary of the association. Other duties which she could not give up will prevent her acceptance of the offer. Miss Lyons was considered an ideal person for the place. At present the young ladies have no one in view, but it is hoped that a suitable person may be procured before long.

The books for study in the mission classes have arrived and will be put into use at once.

Miss Mary Miller, who has been at the Sanitarium at College View for her health, has returned to school much improved.

AN OLD STUDENT FROM THE PHILIPPINES.

Moses T. Barlow, a student in the early nineties, was calling on his old university friends Saturday. He enlisted in a company of volunteers in 1898 and has served two years and a half in the sixteenth regiment U. S. Infantry. He was first made a Sergeant and at the time of his discharge was Quartermaster Sergeant. He is now

second Lieutenant in charge of a company of Philippine scouts. He says he likes the service very much and would not leave the army for the sake of coming to the states, though he would prefer being in the states.

He says that what he learned in the university battalion has been very serviceable in his army life and the French he learned here was of great value to him in learning Spanish which he has to use entirely in his work now.

REV. WILLIAM H. MAUSS RESIGNS.

Rev. William H. Mauss, who is well known to the greater part of the student body, has resigned the pastorate of the first Congregational church and, it is reported, will leave Lincoln. It is thought that his resignation will not be accepted. Rev. Mr. Mauss has always taken a deep interest in matters pertaining to the university and has rendered much valuable assistance in coaching the football team. It could not be ascertained what his plans for the future are.

PROFESSOR BROOKS HEARD FROM.

In a recent letter to a University friend Professor Morgan Brooks speaks as follows about the equipment and conditions at the University of Illinois:

In regard to the mail service at the University of Illinois we have one advantage over Nebraska in that the carrier from the Urbana office delivers mail all through the college buildings to the various departments. This in a large measure makes up for the absence of a branch P. O. as you now have, although that has its advantages, too.

We have electric light and power service continuously, with an occasional shut-down on Sunday during the day. As the agricultural department depends upon electricity for incubator service you will see that it is important to have the service continuous. We are about to double the size of the plant, having \$6,000 to spend now, and will probably get more for details later, the above sum covering merely the machinery at the power house. We shall extend on practically the same as before, the plant being a strictly modern one, and the need for extension being due to the many new buildings going up. You know that the last legislature added \$900,000 to the permanent improvement fund. The one part of the plant not quite up-to-date is the arc lighting apparatus, and that is far ahead of Nebraska's. The necessity for a new plant there seems ever more urgent to me now that I am in different surroundings.

The only colleges in the country that support daily papers are Harvard, Yale, Brown, Pennsylvania, Princeton, Cornell, Michigan, Iowa, Wisconsin, Nebraska, Stanford, California and Indiana.

True, Nebraska did not win from Minnesota but the number that accompanied the team evinces a loyal spirit which is good to contemplate.—The Daily Iowa.

SENIOR TEAM STRONG.

An Experienced Eleven Out to Defend the Class Honor—The Players who will Make up the Team.

The senior lineup yesterday morning shows an unusual number of fast and strong men on the field. There were many veterans of the class games of former years on the field. Captain Dierks will have his men out every morning this week, and he hopes by Saturday to have the team working in machine-like order. The team will have to work hard to sustain its reputation of former years. The class has had the championship team for the last three years. With the showing made yesterday Captain Carter expressed himself as confident that the team will conduct itself creditably again this season. The team will be heavy, averaging about 180 pounds. The back field is strong and snappy. The personnel of the team is as follows: Dasenbeck the big center, is an experienced player. He has played on the scrubs three years and on the varsity in several games. He played left guard against Minnesota last Thanksgiving. He weighs 195

Campbell, at left guard, is a strong and heavy man. He tips the beam at 190 pounds. He played three years on the Hastings high school team as center, and two years as tackle on the University second team.

Burr, last year's scrub end has played football in the high school and university. He breaks up interference well. He is the lightest man on the team.

Garrett has played two years as full-back on the Varsity. He had three years experience on the Pawnee City high school team before coming here. He is an aggressive player and has a thorough knowledge of the game.

Captain Dierks had some experience at Midland college Kansas. He has played two years on the scrubs at half and tackle since coming here. He punts well and will probably do the punting for the team.

Batie has played on high school teams before entering the university. He has never played here but has had three weeks hard practice this fall with the high school of his home town.

Dudley was guard on the Hastings team two years and on the University scrubs last year. He understands the game well and is good on defensive work. He played guard on last year's team.

Bullard, quarterback, is a snappy, fast player. He played on the Pawnee City high school team. He puts up a sure game at quarter.

Clinton has played on the scrubs for three years as half and tackle. He is good at smashing interference and carrying the ball. He will probably play right half.

Kellogg, right end, is an experienced man with the pigskin. He has played on the scrubs for three years, and is at present playing end with them. He understands his position and is a sure tackler.

Nielson, half back, has had three

years' training with Omaha high school and three years with the scrubs. He has played half for the varsity. He weighs 180 pounds.

Swa'low puts up a good game at half back. He has had training on both high school and university teams. He is a fast man. He is playing half on the scrubs at present.

Senger is a big muscular lad from Ashland. He has played tackle on the scrubs and is a good punter. He was one of the best ground gainers on last year's team.

WORK IN THE AGRICULTURAL SCHOOL.

The University of Nebraska school of agriculture opens Nov. 11 and closes for the year April 25. The instruction covers the whole field of agriculture. In live stock the students are given work in judging, feeding, and the principles of breeding. The future breeders of improved live stock should prepare for their important work by making themselves familiar with those laws concerning animal reproduction which are essential to success in this work. Students of the school of agriculture are given one term on the study of various breeds and the principles of animal breeding. The instruction is such as will be of value to any young man who may in the future be engaged in the rearing of farm animals, whether common or registered stock.

The live stock interests of Nebraska are such as to warrant the State University in giving its students in the school of agriculture thorough training in the care and management of farm animals. One feature of this work which is being emphasized more than ever before is stock judging. During the coming season each student will receive instruction which will enable him to discriminate with precision between good and inferior animals of all classes.

The instructions in the school of agriculture are men who have had practical experience on the farm and technical training in the science of feeding. It is their purpose to give to them such instruction on the relative value of food stuffs, compounding of rations and methods of feeding farm animals as will enable them to perform their work with greater intelligence in the future.

A large majority of the farmers of Nebraska are engaged in feeding live stock for the markets. The chief aim of those engaged in this industry is the production of meat with the greatest economy. Through the efforts of experiment stations and from the results of the most successful feeders, the student of agriculture now has at his command much information which will be of service to him in feeding farm animals.

A party of about twenty-five senior mechanical and electrical engineers of the University of Wisconsin leaves for Chicago October 22, where they will charter a special train and make the trip to Buffalo, Niagara Falls and Pittsburg. In those places they will view things of interest and study engineering features. This is the longest trip ever contemplated in Wisconsin. They will be gone about a week.
