About a week ago an unruly dynamo was 'sent down from Wymore to the electrical department to be examined. Several specialists had already inspected it but without discovering the trouble. The electrical department has succeeded in locating the difficulty and are ready to put the machine in order if it is desired.

The bright star which appeared in Perseus last February is still the subject of much discussion in scientific circles. Professor Swezey has considerbale literature on the subject and has himself taken some observations. A few days after its discovery the star flashed out until almost as bright as Sirius. Since then its brightness has diminished to the sixth magnitude, which is just below the range of visibility. Through some violent disturbance the star has become a neoula, and phenomenon in which the astronomers are now interested is the rapid motion of the nebular nucleus.
