Agricultural Students Decide to Publish Monthly Report—Would Keep Graduates In Touch With School

The Agricultural Students Association held its annual election of officers at the state farm this week. Besides the election of officers, much business of importance was transacted.

The meeting was a very enthusiastic one. About two hundred members of the association being present. Various plans for the promotion of interest in agriculture college and the experiment station work were discussed. It was finally decided to publish a monthly bulletin to be under the control of the association, but in direct charge of the professors in the school of agriculture. The bulletin will contain articles on agricultural topics of interest by professors and students, besides giving reports of investigations at the experiment station. The publication of the bulletin will begin about March 1 and will be sent to the members of the association throughout the state.

The deep interest taken by the students in the work being done at the college and the desire to keep in touch with it after starting in the spring is shown by the rapidity and ease with which the sum of \$135 was raised for the publication of the bulletin.

The officers of the association elected were as follows: President, H. S. Wilson; Vice-President, B. Maiben; Secretary-Treasurer, E. A. Tolles.

REV. MR. MAUSS TALKS.

Rev. Mr. Mauss of the First Congregational Church of Lincoln addressed the student convocation and members of the Stock Breeders association yesterday at convocation on the subject, "The Psychology of Religion."

He said in substance: The newest phase of the problem of religion—religion on a scientific basis—is creating new standards for religious life. Each mind, race, or people has a peculiar conception of his relation to God. Religion is a part of humanity, therefore two religions are too many for one individual. Religious conceptions and views can be analyzed and modified in the individuals. In America religion is a biological term. The missionary problem of the nineteenth century shows us that racial phases of religion occur. A comparative study in this connection explains how each religion contributes to the other. All men are in their religion, fundamentally the same; in expression, vastly different.

From the standpoint of psychology various systems of psychological and religious thought are manifest. Environment is the great factor and every phase changes as the environment is modified.

The two important problems of the church today are, why are the conversions largely of persons from 15 to 21 years of age, and why are the men gradually leaving the church?

The young people's societies prove injurious to the church, and probably account for this state of affairs. We are also diverting religion from the defects of the individual. Such religion causes nerve fatigue. Religion should be handled more scientifically. Religion in the past has been too sentimental and has not appealed to the phlegmatic nature of the adult man. Intense and broad thinkers typified by the man of affairs of the nineteenth century; and the phlegmatic—those of slow deliberate action and great will power compose the best minds of the communities. Religion should appeal more to the reason and less to the emotions if stability of thought and more active adult membership is desired.

A full rounded conception of religion today would broaden and deepen the standards of thought, that men of sentiment, action and feeling may all have a place in theology and the church. A study of religion with the comprehension of all the four temperaments of men will create a new religion for the twentieth century.

STUDENTS! ATTENTION TO REGISTRATION!

Registration days are Monday, January 27 to Saturday, February 1, inclusive.

All students are urged to make prompt, studied and exact registration for next semester.

Plan your work before registering in order to avoid changes afterwards.

Study the program and see that the hours for which you register do not conflict.

Pay at the Treasurer's Office second semester incidental fee and present receipt when you register.

SENIORS.

See that your required work is completed or provided for. Register for the necessary number of hours.

NEW AND UNCLASSED STUDENTS.

All students who enter the University this year for the first time, also all unclassified students register with the Enrollment Committee University Hall 104. All others register at Registrar's Office.

E. BENJ. ANDREWS,
Chancellor.

The historical society has received from the Drew Theological Seminary, Madison, New Jersey, a large number of reports of the Methodist conferences in Nebraska, reaching back twenty or thirty years.

BASKET-BALL GAME

Close Contest With Y. M. C. A. Team To-morrow Night Looked For—One of Three State Championship Games.

The game of basketball which will be played in the armory tomorrow evening will be an exciting contest.

The two teams are probably more evenly matched than any other two teams in the state. Between them lies the state basketball championship. Last year the Y. M. C. A. won from the University in one of the most fiercely contested games of the season. This year Captain Koehler's men hope to reverse the result of last year. With the improved team and individual work that the team has shown this early in the season and the support that ought to be given by the student body there is every reason to believe that Nebraska will come out of the game with flying colors. Neither Captain Koehler nor his men anticipate easy victory. The Y. M. C. A. team been practicing with all diligence during the last few days and as the team is made up to a large extent of old and practiced men its strength can easily be understood.

The great importance of this game to the University lies in the fact that it is one of a series that will be played to decide the state championship.

ENGINEERING NOTES.

Elmer Shinbur, ex-'02, who is in the employ of the government engineering department at Havana, Cuba, is about to start on a trip around the island for the purpose of gathering data for a reconnoissance map.

It is interesting to note that the "Engineering News," in speaking of the installation of electric motive power in the New York Central Railway Company's tunnel to avoid the repetition of such disastrous wrecks as occurred a few weeks ago, says that "For several months the company has had Mr. B. J. Arnold, M. Am. Inst. E. E., at work upon plans for such a system; and it is said that announcements of the adoption of these plans is shortly to be made." Mr. Arnold received the degree of Electrical Engineer from this University in 1896.

The sophomores in Engineering should bear in mind that Elementary Mechanics (C. E. 18) given next semester must precede Mechanics of Materials (C. E. 27) which is required in the first semester of the junior year. The regular sequence of "bridges" upon this course makes it imperative that the civil engineering students especially do not overlook this.

The recent ruling of the board of

regents with regard to dropping work without permission is beginning to be appreciated by the few who have not given it serious consideration. Permission to reregister or to register in the continuation of work carelessly dropped will be granted only upon the payment of the \$3 registration fee.

TORONTO CONVENTION OF STUDENTS.

The fourth international convention of the student Volunteer Movement will be held at Toronto, Canada, February 26 to March 2. Students will be sent as delegates from the institutions of higher learning from all sections of the United States and Canada. It is probable that 500 institutions will be represented. Delegates to the number of 2500, comprising not only students, but professors, national religious leaders, returned missionaries, representatives of Foreign Mission Boards, and Editors of religious papers, will be entertained by the citizens of Toronto.

The program will consist of addresses during the morning and evening sessions and section meetings for the consideration of missions from the standpoint of phases of work, missionary lands and denominations represented.

The addresses given will deal with the obligation of promoting the missionary enterprise the meanness essential to its success and its relation to the students of this continent. The most capable leaders of this great movement throughout the world will be present and teach from the richness of their experience. University of Nebraska will be represented by six or eight delegates at this great student gathering.

SOPHOMORES ELECT.

The sophomore class met yesterday morning at ten o'clock in the old chapel and elected officers for next semester. The girls were much in evidence among the hundred members present and they did not fail to let their voices be heard. The meeting was enthusiastic but there was a total lack of wrangling. For some reason the spirit of strife was dormant and the secretary was instructed to cast a unanimous ballot for each nominee. The officers elected were:

E. F. Davis President, Aita Koken, Vice President, Lulu King Secretary, Earl Eager, Treasurer, R. A. McNow, Sergeant-at-Arms.

The meeting adjourned in fifteen minutes after the call to order.

Senator Willard has ordered the publication of the new census sent to the Historical Society. J. A. Barrett the librarian of historical society, is searching for some published maps of Nebraska which are accurate. As yet he has been unable to find one.
