

The Daily Nebraskan.

VOL. 2. NO. 28.

LINCOLN, NEBRASKA, FRIDAY, OCTOBER 24, 1902.

PRICE THREE CENTS.

ANOTHER RATE MADE

The Railroads Hunt for Business —Prospects for a Crowd Are Good—A One Day Excursion.

The B. & M. has seen fit to reduce the rate for the St. Joseph trip from \$2.95 to \$2.50. The special train leaves Lincoln about 7:45 in the morning and arrives at St. Joseph in time for dinner. On the return trip the train will leave St. Joseph about 7 p. m., arriving in Lincoln about midnight.

This is a good rate and a large number will undoubtedly take advantage of it. The trip means a ride of about 300 miles. There is not limit, but the road is anxious to have those who intend to go purchase tickets today. While the team expect to defeat Missouri handily, yet the game will be interesting, and this will be the last opportunity to see the team that defeated Minnesota play away from home. There was no excursion to Boulder or to Minneapolis. Now is the time to take a good trip, at a reasonable rate.

The regular fare for the round trip to St. Joseph is \$9.40.

It was rumored around the campus last evening that the railroads were considering a further reduction. It did not materialize, however, at the last moment.

Scrubs Do Good Work.

The team went through a short practice last night, the last one before they start for St. Joseph. Booth was on the field again, having recovered from Wednesday's sickness.

Englehart suffered a wrenched ankle that will probably keep him out of Saturday's game.

The scrubs played very fierce football and scored on the first team after pushing the ball down the field by straight line bucks. The first team did not play with its usual spirit and aggressiveness.

The scrubs will go to Omaha Saturday to play the Omaha Medics. If they play as good ball as they have been playing they should win.

The following men will leave for St. Joseph today at 12:35 over the Burlington: Palmer, Drain, Curtis, Westover, Ringer, Cotton, Tobin, Mason, Wilson, Cortelyou, Shedd, Follmer, Benedict, Thorp, Bell, Bender, Englehart, Mickle, Borg and Briggs.

LARGE CROWD SEES THE SCRUBS

The Chicago second eleven defeated the Northwestern second eleven at Evanston on Monday before a crowd of 5,000, to the tune of 15 to 5. This shows how much interest is taken in games between second elevens at the above institutions.

Professor and Mrs. Barber will give a reception to the students and faculty of the Latin department next Monday evening at Fraternity hall.

Sophs Beat Academy.

The Academy team played the Sophs a game of fifteen minute halves yesterday afternoon. Although outclassed, the Preps managed to put up a good game of ball and held their opponents down to 16 to 5.

The Sophs kicked off to the Academy's 5 yard line. They returned three and fumbled, but managed to keep the ball. The Academy punted and the Sophs lost on a fumble. The Academy lost the ball in their turn and it rolled behind the line, where Lehmer fell on it.

The Academy kicked to the 5 yard line and after a series of 15 yard runs by Lehmer and Burg, the full back went over the line for a touch down. Then the Academy got in their work and Stein, quarter back, kicked a goal from the 20 yard line. In the second half the Sophs made one more touch-down.

Coach Williams Criticised.

The sporting editors of Minneapolis have been rubbing it into Coach Williams of Minnesota, blaming him in large part for Minnesota's defeat last Saturday. These critical remarks have brought out decided objections by the students. In a recent issue of the daily paper of that institution they show that they have no conception of Coach Williams' liability for the work of the team. Each member comes out with a statement of his estimate of Williams and also alumni make statements backing up the position taken by the student body.

Coach Williams is inclined to resent the criticism which has been leveled at him, and is not to be blamed for so doing. While the coach figures in the successes or failures of a team it can not all be placed to his account. Minnesota is now trying to show its loyalty to him, the team and athletics in general, to show its appreciation of his work.

Games Get Recognition.

The following dispatch tells of the track work done by Gaines, the university's former crack pitcher and track man, who is now at Princeton:

"The annual fall games of the Princeton track team were held this afternoon. The feature was the good work of Gaines, a freshman, who entered Princeton from the University of Nebraska. He won both the high and broad jump, doing the former in five feet ten and one-half inches, and taking first in the latter on his first trial at twenty feet eight inches. He also won the high hurdles in good time. He is regarded as the find of the season, but will not be able to represent Princeton until he has been here a year."

The University of California band has not appeared at any of the games on the Berkeley field this year, owing to a dispute with the football management. The members of the band have demanded season tickets, promising to play at "games that are worth while," but the management fears setting a bad precedent.

ANOTHER VARSITY MAN

Charles S. Lobinger of the Law Department Appointed as a State Court Commissioner.

Charles S. Lobinger, lecturer in the university law school, was appointed a commissioner of the supreme court Wednesday evening. His appointment will fill the vacancy caused by the resignation of Commissioner George A. Day of Omaha. Mr. Day accepted a position as judge of the district court.

The court commission is made up of appointees from the different political parties and Mr. Lobinger was conceded the appointment by the republicans. Mr. Lobinger is the second one of the university faculty who has been placed on the court commission. Roscoe Pound, lecturer in jurisprudence and a graduate of Nebraska, being appointed last year.

Mr. Lobinger holds an enviable reputation by reason of work on legal publications and as a lawyer. He also contributed to the American-English Encyclopedia of Law. Mr. Lobinger has been in the university for two years, and has shown himself very strong in his profession. The salary connected with the new position is in advance of that paid by work in the university. Mr. Lobinger will probably continue in some if not all of his work in the university.

The Medics Are Busy.

The Medical society of the university met last night in M. 301. An innovation was introduced in the nature of a "quiz" which preceded the meeting proper. It was decided to devote the hour from 7 to 8 o'clock every week to a discussion of history, anatomy and other topics of interest to the medical students.

The regular weekly meetings are intended to be most helpful to students in this department of the university, and every means is being taken to make them both instructive and entertaining. The "quiz" hour will, therefore, be made a prominent feature of these meetings, and from it the student may derive much of practical benefit.

Miss Fairchild and Dr. Poynter read very interesting papers before the society. Dr. Poynter, who is now connected with the University School of Medicine, discussed the problems that confront the practicing physician and touched upon the type of man that attains success in the profession of medicine.

The class in bacteriology has been making some interesting experiments in sterilization and some astonishing results have been reached, showing how very difficult it is to completely sterilize the common dishes and apparatus, as well as one's hands and the towels, etc., in everyday use.

Engineering News.

The Engineering society held its first meeting of the year, Wednesday evening.

A nominating committee was elected to nominate officers who are to be elected at the next meeting. The committee elected was A. R. Swoboda, A. Brown and E. L. Thomas. On motion a committee was appointed to arrange for a large attendance at the next meeting. The committee is composed of R. H. Oliver, V. H. Yont and W. C. Sturdevant. After a short report from the editor-in-chief of the engineering annual the meeting adjourned.

J. C. Stevens of the civil engineering department has been appointed assistant state engineer, succeeding B. E. Forbes, '95, who has resigned to accept a commission in the reclamation service of the United States geological survey. Mr. Stevens has been for the past year assistant hydrographer of the U. S. geological survey.

C. E. Reed and J. A. Green have recently been made assistants in the civil engineering department. They have charge of the classes in surveying and railroad engineering.

O. T. Reedy, who was engaged in engineering work in Cuba and Mexico, has recently accepted a commission with the reclamation service of the United States geological survey. Mr. Reedy graduated in '98, and was located, with several other Nebraska men, in Havana.

J. A. Sargent, formerly of the civil engineering department, who was engaged as assistant engineer in the war department in Cuba until the American occupancy ceased, is expected in Lincoln this week. After leaving Cuba he was in the employ of the Mexican Central railway. Mr. Sargent was largely instrumental in bringing such a large colony of Nebraska engineers to Havana.

HAZING REVIVED AT OHIO.

An organization has been formed among the Sophs of the Ohio State University who have dubbed themselves the "Snake Eaters." They consider university life too tame without class "scraps" and are determined to revive the spirit of warfare.

Last Thursday evening a number of Freshmen were captured and thoroughly hazed, an operation which has not been known in the O. S. U. for several years. The unfortunate Freshies were forced to pour water down their own necks, step into their new hats, sing "Mary Had a Little Lamb," backwards, under penalty of being tossed into the lake in case of mistakes, and other equally unpleasant and difficult tasks. It was a sad night for the Freshmen.

Classes in the law school will be suspended on election day, as a majority of the students will go to their homes to vote.

The department of philosophy received a large valuable regulator clock yesterday. The clock will be used for experimental work in psychology when very accurate work is required.
