UNIVERSITY OF NEBRASKA, LINCOLN, WEDNESDAY, OCTOBER 28, 1903.

PRICE 3 CENTS

## IS AT WORK AGAIN

### Team Goes Through Stiff Practice in Preparing for Iowa.

Still the practice goes on. Last evening the work assumed more of the form it had before the Colorado game. On Monday night the practice was exceptionally light, consisting merely in running down punts. The team was given a partial rest after their glorious work on the Saturday preceding.

Work from now on will be in deadly earnest to get into shape for the Iowa game, which will be one the hardest on the schedule and considering the fact that the team plays on strange grounds and after a trip, it will tax their ability to the fullest extent, but it is a certainty that that fullest extent will be equal to the emergency. We feel confident that they will come back home bearing in their hands the crown of olive leaves.

The team leaves for Iowa Thursday at 3 p. m., and arrives in this city again at 3 p. m., the Sunday following. The trip will be made over the Rock Island road.

How about getting up a delegation to go down to that train on Thursday and give them a parting cheer of good fellowship. The leaders of the rooting squads should take this up and push it through. Keep up the spirit, don't let it lag, let the team see that the student body is behind them even though they are away from home.

Mr. Lowery, an old University player, was here on Monday and he had seen the Iowa team play against Minnesota. In this game the Iowa team was defeated by a score of 75 to 0.

Mr. Lowery said that this score could not be taken as an indication of the ability of the Iowa team because they were up against one of the fastest teams in the country. He said that never before had he seen a team which was in any way equal to the Minnesota team as they appeared that day. They were the fastest, hardest, best trained team he had ever seen on a football field. That is coming it strong.

The Iowa team is heavy and fast and plays the game from start to finish. Beyond these meager details nothing is known of the Iowa team and the Nebraska boys are running into a practically unknown quantity. In this instance the proposition is not hard of solution. Nebraska is  $x$  and  $x$  is more than equal to the other side of the equation.

Be sure and keep the subject of the Kansas excursion in mind and register as soon as possible. Make the squad a big one and prove to Kansas that we can beat them at rooting as well as at football.

The faculty is working hard for the meet on Saturday. No one can afford to miss this, it will be the event of the season.

Mr. Shedd's old football nature still crops out. He is captain of one of the teams and when questioned last night regarding the event remarked:

"I don't know much about the arrangements, but of course our team will win the football game."

## CARNIVAL DRAWS NIGH.

### Faculty Getting Into Shape for Smashing Joints and Records.

Saturday, Oct. 31, 1903, is the date of the most stupendous event that has ever occurred within the recollection of historical man. Written tradition has acquainted us with the great Olympic games, when the Hellenic youths assembled to fight it out for the olive wreath, but though we turn the pages of untold numbers of volumes we can find no parallel for Saturday's event. The back-door yard of

many an abode in Lincoln that shelters profound preceptorial wisdom and intellect, has been the scene of startling activities during the course of the past two weeks.

The hammer has hurtled through the air and made large excavations in the ground, while the claud of the baseball against the hen house door has disturbed the peace of several neighborhoods with relentless regularity. All this mighty display of effort will be concentrated into a series of grand and wonderful events that will live forever in the minds of the present and future generations.

The football teams under the command of Dr. Condra and George Shedd and expect to give a whirlwind exhibition of the game Saturday. Brass knuckles have been ruled out and there will be no hitting in the clinches.

The baseball men have not been idle, but have been putting in their time to good advantage.

Mr. Spencer's team has been hard at work practicing for several nights, and he is so well pleased with the showing of the men that he thinks there will be little difficulty in preventing Dr. Ward's team from scoring. The brilliant throwing to bases by Dr. Condra, the star twirling of Professor Fogg, the magnificent fielding of Professor Loveland at shortstop are especially encouraging. However, the most thrilling and spectacular part of the practice is the manner in which Professor Barbour slides to bases. This alone means numerous scores for Dr. Ward's opponents. In fact, all the members of Captain Spencer's team seem abundantly able to hold their respective positions in spite of the numerous substitutes who are clamoring for positions. The team will practice each day until Saturday at 5 p. m.

Dr. Ward's team was out last night and their work was characterized by a swift snappy practice that angred ill for their opponents. Incidentally they kept the bat and ball in their possession so that the opposing team was unable to practice at all. They have the right spirit and have discovered the surest road to success. Rumors are current of an eruption in the faculty, and if such a catastrophe occurs the students must be careful for the sake of their own standing in their work to be sure as to what side they take, as carelessness in this respect may earn for them an undying and relentless hate that will pursue them to the death.

Among the most pleasing features will be one in which Prof. Taylor will figure largely. He will exhibit the high schooled horse, giving genuine exhibitions of the trained horse. He has given a great deal of time and attention to the training of horses, and his efforts have been rewarded handsomely. His horses perform a number of feats in a most excellent manner. No better exhibition can be seen anywhere than this one. A full program of the feats which he will attempt will be published before the meet on Saturday afternoon.

For the wheelbarrow race Professors Sweezy, Hodgman, Dann, Miller, French and Chatburn have entered. A footrace has been arranged between Dr. Pound and Prof. Taylor. There will be a walking race also. There will be a midway just inside the gate in which many of the usual and some new exhibitions will be found.

Meerscham pipes, 25 per cent off this week.—F. A. Powell, Oliver theatre building.

## PUSH TEMPLE FUND

### Committee Makes Preparations to Raise Balance of Fund.

The committee in charge of the work of raising the balance of the Temple Fund have begun work in earnest. Circulars have been prepared setting forth the need and advantages of such a building and they will shortly be sent out to people in all parts of the state. The committee has been very busy in preparing plans, but now that all is ready they expect to push the undertaking rapidly to success.

Two thousand circulars will be sent out in the course of the next week among the alumni and these will be accompanied by pledge cards. Twelve thousand circulars will be also sent out, which are calculated to reach most of the business and professional men of the state. Altogether it is expected that 40,000 people in the state will be reached by correspondence. The towns outside of Lincoln will be thoroughly canvassed, it having been decided at a meeting of the committee Monday evening to employ an expert solicitor for this purpose. Sixty days are yet remaining in which to receive pledges and during that time the work will be pushed without cessation. Although a large amount has already been raised in Lincoln, pledge cards are still being disposed of here.

Members of the faculty and friends of the University have been using their best efforts to disseminate the truth among the people throughout the state and have met with good success.

Last spring the Junior and Senior classes were thoroughly canvassed and several hundred dollars pledged. Part of these pledges have been redeemed, but a great part of them is still outstanding. A canvass will be organized and put into effect during the next sixty days that will include all the classes and, it is hoped, reach every University student. The matter will be presented before the Freshman class as soon as it is well organized, and it is expected that it will take hold of the matter enthusiastically and do all in its power to help the movement.

The committee will be glad to have students call for pledge cards for themselves and for others. It is hoped that the Y. M. C. A. and Y. W. C. A. bodies will take an active interest and do all that lies within their means toward securing what will mean for them splendid new quarters and every facility for carrying on the work. Ample provision will be made for them in the new building and they will be comfortably situated, so that their sphere of influence may expand into fields that it has never known before. The committee will be glad to have volunteers to call for lists and be responsible for certain students. In this way a student may further the interests of his alma mater and procure a lasting benefit for himself.

While all these arrangements are being made for sweetening the fund, much good work has been done already. The sum already raised has mounted up to \$12,000. Of this amount the faculty has contributed upwards of \$3,000, a sum which bids fair to become nearer to \$4,000. Some of the alumni have responded liberally, sending in sums ranging from \$5 to \$50. Public spirited citizens throughout the state have assisted in a very substantial manner, but the field has hardly been touched as yet.

The need of such a building is certainly great, and the purposes for which it can be used are manifold. Ample and commodious quarters will be afforded for the now existing social and religious organizations of the University and for any hereafter formed. The vastly useful work now done by

the religious organizations of the University, such as finding homes and work for new students, Bible study, visiting the sick and the poor, is painfully hampered for lack of quarters, basement rooms being the best that can now be afforded. While the building will fittingly house the religious organizations of the University it will not belong exclusively to them but to the entire University, being available for receptions, interviews, social gatherings and meetings of all sorts not inconsistent with the spirit of its foundation.

Perhaps an enumeration of the organizations that will be provided for, which have at present no adequate quarters for their meetings will bring with some force to many the uses for which the Temple building will be available. The following clubs and societies are obliged to meet either in recitation rooms or in inadequate quarters: The literary societies, English club, the Dramatic club, Engineering society, Philosophical society, Chemical society, debating clubs, Ornithology association, Graduate club and the Medical society. This is but a partial list of the organizations that are improperly housed, and it emphasizes greatly the need of such a building as the one we are laboring to secure.

The building will contain reception and rest rooms and will be built strictly for the convenience and accommodation of the University public. It will be built on the same plan as the Lincoln library building and will be an ornament to the campus and a source of pride to all who have come into contact with the influences of this institution.

That the University holds a prominent place among the institutions of higher learning is a fact well established. The high standing of our faculty, the facilities for carrying on our work, our splendid library, and the attention given to research work in our laboratories are matters in which we all take pride, and the report of their high efficiency has gone out beyond our own borders. And even to many who are quite well informed it may seem that the institution although far from being completely equipped, is doing well enough. But there are phases of University life which with the rapid growth of this institution have been left behind, and others, springing up with its development, have not been given deserved attention. We refer especially to the voluntary associations and societies organized for social and intellectual development which we have dwelt upon quite fully above.

And last of all, let everybody bear in mind the fact that the completion of this fund means to the University another handsome building on an enlarged campus, a building which for the purposes contemplated, the state would never, probably under its constitution, could not provide. It will give us a building that will grace our campus, and aid in the expansion of many department now badly congested and with no other prospect of an outlet. Let each of us then do our share in promoting this work, and not tire until we have the satisfaction of knowing that a great task has been accomplished and a great benefit procured to the University.
