Vol. VII. No. 4.

UNIVERSITY OF NEBRASKA, LINCOLN, THURSDAY, SEPTEMBER 26, 1907.

Price 5 Cents.

## A LARGE BUILDING

NEW MUSEUM TO BE OF GREAT SIZE WHEN COMPLETED.

Will Consist of Three Wings and Will Hold Hundreds of Exhibits—Description.

The new Museum, which has aroused so much comment on the campus, will be, when finished larger than any building which we now have, with the possible exception of University Hall. The building as it stands today is less than half of what will eventually be the south wing of a completed building of three wings. Two similar wings will be built on the north of the present structure. The north wing will approach as near the north fence as the present building does the east fence, and will occupy part of the ground now covered by Nebraska Hall. The three wings will be connected by hallways, making a building that is nearly the shape of the letter E.

The whole building will be four stories high and the architectural features of the present structure will be carried out in each wing as it is built. The building will face the west. The architect has also arranged for two very elaborate entrances to cost about five thousand dollars each.

Mr. Kimball, a prominent architect of Omaha, is the architect for this building, and in designing it, took into consideration all the requirements of an ideal museum. It is arranged to admit the maximum amount of light. Professor Barbour and Miss Barbour have visited the museums of Yale and Harvard, together with the New York Natural History Museum and they feel that no museum in the country will be better adapted for the display of specimens than ours, when it is completed.

When the exhibits are in place and every available foot of space on the four floors is taken there will still be a large number of exhibits that will have to be packed away. It is expected that the next session of the legislature will authorize the completion of at least the wing already started.

The first floor of the building is to be used for store rooms, work rooms, and laboratories. On the second floor the heavier materials such as agates and bad land vertebrates will be displayed. Besides this, the offices of the department and the offices of the geological survey will be found on this floor. On the third floor will be everything relating to man, such as mummies, Indian relics, etc. On the fourth floor will be placed the lighter materials such as stuffed animals and birds. Owing to the great amount of labor required in moving the museum many specimens are not yet in their proper shape on the exhibition shelves. It will be some time before everything is in shape.

William Ramsey, Law 1907, is practicing law in his father's office at Plattsmouth.

The Museum as it Appears Today.

## FACULTY CHANGES

ADDITIONS AND WITHDRAWALS MADE SINCE SPRING.

All Colleges of the University Have Been Affected by Changes—Pound at Northwestern.

Many changes have been made in the faculty of all the schools in the University since last year. Among the most important of these were the resignations of Dean Pound of the Law school, and Professor Clements of the Botany department. The former has gone to the Northwestern law school, where he receives a larger salary than he was paid here, and the latter has been made head professor in the Botany department at Minnesota.

In the College of Literature, Science and Arts, Dr. Christophelsmeier has taken the place of European History Instructor Miss Laura B. Pfeiffer, who is away on a year's leave of absence, doing work on a doctor's degree. Dr. Christophelsmeier is a graduate of the University of Nebraska and for the last few years has been studying abroad. He comes here from Appleton University.

The Department of Sociology and Political Science has an addition to its faculty in Dr. Hutton Webster, who took his doctor's degree at Harvard in 1903 and who was formerly a professor at Williams College. Dr. Webster is offering a number of new courses that have not been taught here before.

Professor Phillips, a graduate of the University of Michigan, and for a number of years a member of the United States forestry service, has succeeded Professor Miller in the Forestry department. Professor Miller is now at the University of Washington.

In the College of Law, the resignation of Dean Pound has caused several changes to be made. Professor Costigan, a prominent instructor of the law school, has become Dean and Professor Conant, formerly Dean of the Topeka College of Law, has been added to the faculty.

In the Department of Botany, Raymond J. Poole and Dr. Walker have taken charge of the work formerly handled by Dr. Clements, resigned. Instructor Poole graduated from the University last spring.

Changes have affected nearly every branch of the Industrial College. Instructor Sluymaker in machine designing has succeeded Instructor Viers, who resigned last June. Instructor Sluymaker has had about eight years' practical experience in designing work and is regarded as a valuable addition to the school. Mr. Rasmussen, a graduate of Purdue, has been elected instructor in drawing. He has taken charge of the Freshman drawing classes. Instructor Swoboda, resigned, has been succeeded by Mr. Hollister, a graduate of the University of Illinois. (Continued on page 4.)

### FRESHMAN POLITICS.

First Year Men Are Looking for Candidates.

Altho no date has been set for the Freshman class election, yet there is considerable speculation among the first year men as to whom the candidates for president will be. While no students have come out as seeking the presidency still it is generally understood that several of them have political bees and that they are doing a little wire pulling. It is known that each Lincoln, Omaha, and Beatrice has a candidate for the office. There are also several "dark horses," yet unmentioned by Henry Watterson, but who will be in the race later on.

### Colorado Heavy.

Reports from Boulder say that Colorado will have one of the heaviest and fastest teams in her history this year. The men who have returned to practice at the Boulder school, with their weights and experience are as follows:

Captain Nat Farnsworth, 185, two years, center or fullback; Ray Barr, 203, two years, guard or tackle; Roller, 195, three years, guard; Kimmel, 178, one year, guard or tackle; Coffin, 175, three years, tackle; Morrison, 165, one year, end; Knowles, 165, two years, half; Thomas, 170, three years, full; Morrill, 165, one year, half; Roberts, 165, one year, half; Weiner, one year, 200, full; Reid, one year, 160, full.

### MUSIC FRAT.

Chapter of National Society for Nebraska?

An effort is being made in local musical circles to establish a chapter of one of the leading national musical fraternities at Nebraska. The fraternity is said to be the strongest of its kind in this country. One-third of its members are elected from university students at large and the rest are chosen from students taking their major work in the School of Music.

### Gridiron Gleanings.

Captain Weller made the first touch-down of the season in Tuesday night's practice against the scrubs after a twenty-five yard dash through the line.

The scrubs put up a stiff defense but were unable to do much with the varsity on offense.

Big Harvey was stationed at end and did good work.

Bill Chaloupka showed up nicely in charging thru the line.

Benson, a former Bellevue star, was out in a suit for the first time.

Craig, Denslow and Sommerhalter were added to the squad.

Miller Benedict has withdrawn from school in order to take up outside work. The loss of Benedict is greatly regretted by the members of the football squad, both on account of his capacity for hard and earnest work and his general popularity.

## Y. M. C. A. "STAG" RECEPTION

### PADDLE SOCIAL

Come early and bring paddle

Memorial Hall. Saturday, Sept. 28. 8 o'clock.
