## PILE UP BIG SCORE

CORNHUSKERS SCORE 39 POINTS  
AGAINST COYOTES.

Nebraska Uses No Trick Plays and  
Wins on Straight Football that  
Paralyzes Opponents.

Nebraska overwhelmingly defeated South Dakota Saturday, wiping out the memories of the humiliating score of last year when the Coyotes held the Cornhuskers to a single drop kick.

Straight, hard football was played throughout, no trick plays, forward passes or fancy plays being used by the Nebraska team. The Cornhusker backs plunged through tackles, guards and center successively with a great many sprints around the ends. The brilliant work of Captain Weller was a feature of the game, whose magnificent punting and all-around offensive and defensive work formed a chief factor in Nebraska's victory.

The team showed a marked improvement over that of the Peru game, each man working in co-operation with his mates, and all working together.

For the first few minutes the visitors put up a strong defense, which was quite unexpected, and threatened to hold the Cornhuskers to a low score. The constant hammering attack of Cole's men soon wore the Dakotans out and the Cornhuskers scored rapidly. However, the Coyotes played hard and in the second half took a brace, carrying the ball by successive line plunges and end runs within the shadow of Nebraska's goal, where they lost the ball on a forward pass, on the twenty-five yard line, thus losing their only opportunity to score.

The first touchdown was made by Harvey on a fluke, Weller having punted to Simpson, who dropped the ball which was knocked across the goal line by Matters.

Latten kicked off to Beltzer who returned the ball 15 yards. A short punt by Weller and a fumble by Coffey gave Nebraska 35 yards. Chaloupka tore off two yards through tackle followed by a similar advance by Matters. Kroger trucked center for five yards, scoring the second touchdown. Weller kicked goal. Score—Nebraska 11, South Dakota 0.

Latten kicked to Matters, who returned the ball to 45 yard line. A penalty forced Weller to punt. A forward pass to Olsten was secured by Burnett who ran thirty yards before being downed. A bad fumble cost Nebraska 10 yards. Weller punted to Simpson on Dakota's goal line who returned 10 yards. Hare made ten yards on a delayed pass and Olivera failed to gain around Beltzer's end. Latten punted to Johnson, Kroger, with good interference, ran twenty yards for his second touchdown. Weller kicked goal. Score—Nebraska 17, South Dakota 0.

Minor got kick-off, returning ball twenty yards. A 15 yard penalty forced Weller to punt. The kick was a feature of the game, sailing 75 yards. The punt was fumbled by Simpson

## Basket Ball Practice

Begins Tuesday, October 8

—ARMORY—

Four p. m. until Five p. m.

### HEWETT HERE.

#### Eminent Archaeologist of Washington Visits University.

Professor Edgar L. Hewett, director of the Archaeological Institute of America, with headquarters at Washington, D. C., spent Saturday and Sunday in Lincoln as a guest at the home of Dr. and Mrs. Charles William Wallace of the department of English Literature. Professor Hewett and Dr. Wallace have been life-long friends since the days when as neighbor lads they stepped from the farm into the high school.

During his brief stay here, Professor Hewett spent a short time in conference with Dr. Barbour and Dean Ward concerning the recent discovery of the remains of primitive man near Omaha—known generally in scientific circles as "The Loess man of Nebraska," or simply "the Nebraska man." The announcement of this discovery about a year ago by Drs. Barbour and Ward has aroused the interest of scientists throughout the world. While very reserved in his opinion, this eminent archaeologist gave the Nebraska scientists great encouragement, and felt that there were undiscovered possibilities here that might lead to the settling of large questions concerning primitive man on this continent. Should Nebraska see her way to organize for archaeological research, assurance was given by the director that the Archaeological Institute of America stands ready to co-operate in the work at any time when needed. Professor Hewett will later in the year return for the purpose of examining the mound itself in company with Professors Ward, Barbour and others.

### ASSISTANT COACH.

#### H. M. Peck Will Help Cole Train Cornhuskers.

Herbert M. Peck of Charlottesville, Virginia, has been secured to assist "King" Cole in coaching the Nebraska football eleven. Mr. Peck was assistant to Cole at the University of Virginia last fall and the year before coached at one of the colleges of Missouri.

He played football four years while attending Lawrence college at Appleton, Wisconsin. Mr. Peck will not come to Lincoln until Sunday.

All cross-country runners are requested to meet in Dr. Clapp's office at 11:00 o'clock this morning. Practice hours will be arranged at this time.

The best coffee I ever drank—that served in The Boston Lunch. Try it.

### WHAT THEY DID.

#### Kansas and Colorado Win By Good Margins.

That Nebraska's two rivals—Kansas and Colorado—are still in the game and looking round was demonstrated Saturday, when the Jayhawkers walked over William Jewell College to the tune of 38 to 0, and when the Boulderites trounced Koehler's Denver university "chappies" by the score of 29 to 1.

The Denver News has the following to say about the Colorado-Denver game.

Yesterday's contest at Denver University Park between the University of Colorado and the University of Denver was chiefly interesting to the critical outsider as a study in the new game and as affording a line on the comparative strength of two of the five teams competing for the Rocky mountain intercollegiate championship. The score of 29 to 1 fairly represents the comparative strength of the two elevens in yesterday's early season form. Under the old rules the state university would probably have rolled up an even larger score. Boulder's game yesterday was a wonderful revelation of early season individual and team play, and should furnish food for thought for the colleges on Colorado's schedule. On yesterday's showing it is an entirely safe prediction that the Folsom-Castleman eleven could have defeated any of the teams on its schedule with the possible exception of Nebraska. This machine is just getting started, and when in full momentum it will behoove Coaches Ellsworth, Gilkey, Rothgeb and Cole to beware, for at present Boulder is the best prospect in sight.

The following article regarding the Kansas-William Jewell game is taken from the Kansas City Journal:

The game demonstrated that the Kansas team this year will not be a world beater. However, the men promise to play football that will be good enough to beat more than half of the teams Kansas meets. There were no particular stars. The Kansas line was steady and had no trouble in holding the Jewell men. Rouse and Stehenson did good work at guard and Crowell and Caldwell look mighty good at the tackle positions. Reed's bad passes were responsible for much of the fumbling on the part of the Kansas backs. This is his first year at center. He played a good defensive and offensive game. White and Milton did well at ends. Their work on receiving forward passes was particu-

## IN BERMUDA ISLES

MORILL EXPEDITION COLLECTS  
CORALS AND FISHES.

Party Under the Direction of Prof. Barbour Spend Weeks in Adding  
Specimens to the Collection.

During the past summer an expedition of the Hon. Chas. H. Morill, under the direction of Professor Barbour, secured a very interesting and remarkable collection of corals and fishes in the Bermuda Islands. The party, consisting of a number of post graduates from Harvard, spent six weeks in the Bermuda Biological station, collecting living marine forms and fossils.

The region is exceedingly rich in corals, sponges, fish and shell life. A large collection of corals was secured, some coral heads measuring as much as two feet in diameter. In all, several thousand specimens were obtained. These were boxed and shipped to Lincoln in bond.

In order to secure these things it was necessary to spend from three to five hours daily in the water often waist deep. A dip net and other tools for cutting off and securing specimens were used. In wading about, it was necessary to use a water glass to see below the surface.

The water about the Bermuda Islands is exceedingly mild and clear. It is literally teeming with fish of the most remarkable beauty of color. Professor Barbour declared that fish of every size and variety crowded about him, as curious and as tame as domestic pets. The water is full of sharks, but as yet no fatalities from this cause have been reported. One shark found its way into Hamilton Harbor where the station is located and all were warned, but the fish was killed in three days. When measured it was found to be slightly more than twelve feet long.

The Bermuda Islands really consist of one main island shaped like the letter C and many smaller ones. The large island is about one mile wide and nineteen miles long, and is surrounded by two or three hundred smaller islands. It is bordered on the west by submerged land equal in area to the state of Ohio. In this place the ocean is not deep enough to permit large boats to pass and is an ideal fishing ground. Just beyond are soundings up to 3,000 feet. The semi-tropical climate is exceedingly equable, never freezing and never going about 85 degrees. This attracts great numbers of tourists during the winter season.

Agar Island, with all its buildings was recently turned over to the Bermuda Biological Station by the British government. A year ago the same island was an immense arsenal stored with munitions of war. It is said that there is an understanding between the United States and Great Britain whereby the islands are to be turned over to the United States in the near future. As a result the weapons of
