UNIVERSITY OF NEBRASKA, LINCOLN, WEDNESDAY, NOVEMBER 25, 1908.

Price 5 Cent.

PLAN FARM DISPLAY

AGRICULTURAL COLLEGE WILL HAVE A BIG EXHIBIT.

TEN DEPARTMENTS INCLUDED

Among Those Will Be Animal Husbandry, Domestic Science, Field Crop, Soil Crop, Dairy, Entomology and Botany.

During the corn show at Omaha the first week of December the agricultural college of the university has prepared to exhibit an interesting display. Including nine or ten departments, the exhibit will be of great interest to everyone but particularly to those interested in scientific farming. At least two demonstrators will be on hand constantly to explain each exhibit and lecture on its adaption to home work. The lectures will, of necessity, be short but it has been arranged that anyone seeking further information may secure answers to inquiries and literature from the "Bureau of Information." Among the departments which will be exhibited are domestic science, field crop, soil

department is now at work on the map and will have it ready by the time the corn show opens. The work of the university farm in this department is considered so important by the board of regents as to receive their personal attention.

Live Stock Feeding.

The department of animal husbandry will show various feeding rations. One demonstrator will mix a ration of feed for one day, showing the actual amount of grain that should be fed in that time. The experiences of the department in the past will be given. Thousands of dollars will be saved annually by the stock feeders, it is predicted, by reason of this exhibit.

The dairy department will illustrate its work by life sized pictures of the cows of different type, together with milk buckets showing the different quantity of milk each type of cow gives. The amount of butter fat from the different varieties will also be shown.

An exhibition by the entomology department will show the kinds of bugs which destroy the crops and will also undertake to show some of the methods by which the damage can be minimized. The department of botany will show corn diseases and di-

SENIORS WIN TITLE

DEFEATED THE JUNIORS BY SCORE OF 11 TO 0.

'VARSITY IS READY FOR WABASH

Cornhuskers Expect Hard Struggle Tomorrow Against the "Little Giants," But Are In Good Shape To Win.

Yesterday afternoon in the fiercest inter-class game ever played at Nebraska the seniors defeated the juniors by the score of 11 to 0. The game was the last of the inter-class series and upon its outcome depended the class championship title, which now falls to the seniors. In the series there have been played three games, as follows: The sophomores defeated the juniors 6 to 5; the seniors defeated the sophomores 11 to 0, and yesterday the seniors defeated the juniors 11 to 0. Thus, by winning two games, the seniors are the undisputed champions.

The game yesterday was the hardest fought and most spectacular class game that has ever been put up by

after which Captain Wangerien kicked goal.

Details of the Game.

The seniors won the toss and chose to defend the west goal with the wind in their favor. The juniors kicked off to Waters, who returned 20 yards. Bell made four yards around left end and Woods failed to gain around right end. Bell fell back for a punt but it was blocked by Thomas and the juniors recovered the pigskin. Schmidt made five yards around right end and a short kick netted ten more. Burleigh failed to gain around left end and an on-side kick was blocked by the seniors. Hummell made six yards through center and followed with eight more around right end. Wangerien made five yards around left end and Hummell failed to gain twice which gave the ball to the juniors on downs.

Jones and Schmidt made it first down on end runs and Spellmeyer pulled off an 8-yard gain past the right tackle. Ditterline gained two yards on a tackle-around play and Waters of the seniors was injured. He resumed play, and on the next down a short kick by the juniors was recovered by Burleigh. The seniors were given the ball because the juniors were alleged to have interfered with

Y. M. C. A. GETS MANY

GRADUATES FIND PROFITABLE FIELD IN WORK.

WHITE PLANS TO GO TO INDIA

Jorgensen Finds Difficult Work Before Him at the University of Wisconsin—Makes Many New Friends.

More and more Nebraska graduates are constantly going into Y. M. C. A. work in different parts of the country. Reports received at the local Y. M. C. A. rooms indicate that they are rapidly taking positions of responsibility and importance, and are succeeding in this line of work as Nebraska men always do in whatever they undertake.

Nebraska graduates are now at the heads of Y. M. C. A. associations in different parts of the country and in the near future, at least one will be engaged in the work in India.

All declare that they are interested in their work and are being successful in their efforts to bring the work

Wabash Football Squad Which Will Meet Nebraska Tomorrow

crop, animal husbandry, dairy, entomology and botany.

A Model Kitchen.

The exhibit of the domestic science department will comprise a model kitchen, wherein many labor and time-saving methods for both the city and farm housewife will be demonstrated. The field crop department will illustrate plant breeding and culture, giving exhibitions of the working of this important branch of farm work.

Probably the most interesting of all the department exhibits will be that of the soil crop. A large map of Nebraska, made from the soil of different sections, has been prepared to show just which soil is especially adapted for farming and what sections need special attention. The experience of the university school is that gradually land is becoming exhausted and the farmer must now be educated to more scientific farming. The attention of crops will be explained and how the soil should be treated to prevent its decay. The

seases of other crops, together with specimens of the crops affected. Large drawings of different plants and crops will complete the botany exhibit.

With hard work by the students in the mechanical department the exhibit will be complete. Those in charge are working hard to make it a pronounced success.

A handsome monument has been erected in honor of Col. John M. Stotsenburg, colonel of the First Nebraska volunteers, upon the battlefield at Ouingua, P. I. The monument is a massive affair with a column in the center and a cannon surmounting it. An inscription gives his record, rank and date and manner of death. Many Nebraska university students will remember Col. Stotsenburg as commandant of cadets in the nineties. He is now buried in the national cemetery at Washington, D. C.

The best oyster stew in the city is that served at The Boston Lunch. Try it.

Nebraska students within the recollection of the present contingent of football enthusiasts. From the initial kick-off until the whistle blew for the close of the game the two teams never let up for a moment and not until the end of the game were the seniors sure that the victory was theirs.

Woods, of the seniors, pulled off a sensational play during the last few seconds of play which recalled to the rooters the merry days of yore when "Twister" Bender was accustomed to perform such stunts. It was the seniors' ball on the juniors' 40-yard line, and Woods was given the spheroid for a run around right end; he got away cleanly and had run some fifteen yards when the final whistle blew, but according to the rules the game was not over until this play was finished. Following excellent interference and displaying spectacular foot work Woods was able to shake off several tacklers and cover the remaining distance for a touchdown,

a fair catch. Bell punted to Burleigh who was tackled without a return.

Schmidt failed to gain and on an exchange of punts the seniors recovered the ball on the junior 40-yard line. Barrett and Campbell made small gains and an attempted drop kick by Bell was blocked and the ball recovered by the juniors. Spellmeyer made four yards and a short kick netted the juniors about twelve yards. An exchange of punts gave the seniors a slight gain but Schmidt punted again and the ball was recovered by a junior for a 25-yard gain. Schmidt made fifteen yards around left end but dropped the ball and it went to the seniors.

Hummell made fifteen yards and Wangerien followed with five through the line. Bell attempted a drop kick and the seniors recovered the ball. Wangerien made six yards through right tackle, Campbell, followed with two through center and Wangerien made it first down. The ball was on

of the Y. M. C. A. into more prominence.

Among Students in India.

Mr. H. W. White, '07, plans to leave for Medras, India, some time during the early part of February. He is planning to undertake an entirely different line of work from any that has been undertaken in the past. He will attempt to work among the native students of Medras, and by picking out capable men and training them for leadership in Christian work he hopes to reach a larger proportion of the people. There are 1,100 students in Medras, so that a tremendous field is open to his work. At the present time there are eight American Y. M. C. A. secretaries in India, but they are all engaged in city work and have not attempted anything of the sort that will be attempted by Mr. White.

Mr. White went from Nebraska to Brooklyn, New York, where he was religious work director in the city.
