**SIGMA XI ANNOUNCES A PARTIAL PROGRAM**

FIRST MEETING WILL BE HELD. DEC. 13 IN ELECTRICAL LAB.

**PROFESSOR LOWELL CHARTER DAY**

Noted Authority on Mars, Its Canals and Astronomy, Will Address the Meeting on February 15th.

The program for the meetings of Sigma Xi, the honorary scientific fraternity, has been made out in part, and was announced yesterday. The program consists of lectures by members of the fraternity on scientific subjects. The lectures are, however, usually of such a nature to be popular with a large number of the university public and are always well attended.

The first meeting on the schedule as made out at the present time will be held December 13. The program for this meeting will be divided into two parts, the first of which will consist of an address by Dr. H. H. Waite on "Polyomyelitis." The address will be illustrated with lantern slides and actual bacteriological specimens prepared by the doctor in investigating the disease which caused so much alarm throughout parts of the state during the early part of this fall. He will take up the different points and phases of the disease from the bacteriological standpoint.

**Advance in Illuminants.**

The second part of this meeting will be devoted to electrical illuminants. Professor Morse will demonstrate the recent advances in this phase of the practical application of science with some elaborately constructed apparatus which he is at the present time engaged in setting up in the electrical laboratory, where the lecture will be held.

The second meeting of Sigma Xi will be held on Charter Day, when Dr. Percival Lowell of Harvard will lecture. This will be one of the largest meetings of the fraternity for this year. Professor Lowell is one of the foremost authorities on Mars, its canals and astronomy. He made a special study of this subject, on which he will speak, some time ago in Arizona.

**At State Farm.**

The third meeting of the year will be held at the state farm, although the date has not as yet been definitely decided upon. The program will consist of lectures by Professors A. A. Emerson and E. G. Montgomery. The subjects of these lectures have not been announced, but they will be along the line of the recent developments in heredity.

The remainder of the program has not been settled upon. The lectures of the society are always well attended and prove of interest to a large part of the university public. They sometimes take up the scientific subjects from a strictly scientific viewpoint and in scientific terms, but this is usually the case only when the subject will not permit of more popular treatment.

Sigma Xi is a national honorary scientific fraternity. The object of the fraternity is to encourage original research along scientific lines and to bring to the public the latest results achieved in science.

An instructor in the University of Kansas says that he can in fifteen minutes teach any ordinary man to swim. Every sophomore and every freshman there has to learn that art.

Dr. James P. Magenis of the Boston board of education announces that hereafter every high school girl in the city, unless incapacitated, will be required to master the art of swimming in order to obtain points for her graduation.

The board of education of New York City has decided to build an eight-story high school building at Irving Place. The building is estimated to cost \$10,000,000, will accommodate 6,000 pupils and will have four elevators. One of the features of this highest high school will be an assembly hall seating 1,600 persons.

**I**F you wear good clothes we want you to know more about our Kensington garments for Men and Young Men.

Fitting Men Better—with better clothes and better values is what we try to do, and a large portion of men say we do it and say it enthusiastically.

KENSINGTON clothes are now known and referred to as the standard by which others are measured, a fact for which there is a reason and you will know the reason if you once put them to the test.

Try One of the New Grays, \$15.00 and up.
