vised list of the changes made in the football rules at the recent meeting of the football rules committee. Although the changes are more numerous than for several years, they are mostly unimportant, dealing largely with the amending of former rules in regard to penalties and interpretations. The three of most importance are the new ruling which allows players to return to the game only during an intermission of two succeeding quarters instead of the last year's rule which allowed men to return to the game at any time during the last quarter; the specific statement that the ball is not put in play, that is, is not "snapped back," until it has left the possession of the center—a rule which will make impossible rather questionable fake plays in which the center holds the ball between his legs until the fake is well under way—and the new rule which states that if a forward pass goes out of bounds it shall be an incomplete forward pass, and shall therefore go to the opposing side at the point from which it was passed, should this occur on the fourth down. Formerly when the ball was passed out of bounds on the fourth down, if the ball had not previously touched the ground, it went to the opposing side at the point it left the field of play. This will not permit the passing of the ball out of bounds on the fourth down, a play resorted to by many teams to do away with the danger of a blocked punt.

CARE OF INJURED IN ENGINEERING WORK

Doctor J. Stanley Welch Explained How to Give First Aid to Injured in More Common Accidents

On February 2nd, Dr. J. Stanley Welch gave a lecture and demonstration of the principles of First Aid to the Injured. His purpose was primarily to teach the engineer how to give the first assistance to a man who has been injured in the more common accidents of engineering work. He demonstrated how to remove foreign matter from the eye and the care and bandaging of that part. He demonstrated how to prevent excess bleeding, how to make bandages and treat wounds, burns, and cuts. He made first aid splints, and showed how to care for fractured members. He taught how to resuscitate a person asphyxiated, smothered or drowned and gave instruction of the care of persons poisoned or bitten by venomous reptiles or insects.

Owing to the fact that this was such an interesting lecture and so practical and instructive, and that there was so few that heard it that the Engineering Society has asked him to repeat it on Wednesday evening, February 17, which he has very kindly consented to do. The lecture will be much the same with the exception that he will have with him a pulmotor which will be explained.

Dr. J. Stanley Welch is a graduate of the University of Nebraska, of Northwestern, has served in the Cook County Hospital, and has studied extensively in Berlin and Vienna. Besides this he has had a very wide practice in Lincoln and throughout the state. Dr. Welch is recognized as one of the greatest authorities on things medical and surgical in the state, if not in the middle west.

The engineers are urged to come out and support the society and give Dr. Welch an audience that is worthy of his trouble. It is a subject not well taught in books and a subject taught in eastern engineering schools. All engineers out and bring a friend.

After the lecture the meeting will be open for questions which the doctor will answer.

LOST—Gold signet ring, with initials G. F. K. Call L-9590. Reward.

Social and Personal

Miss Gladys Wilkinson will entertain the Le Matin Bridge Club at a one o'clock luncheon at the Lincoln today.

Miss Florence Stone of Athens, Greece, will arrive in Lincoln today to be the guest of the Misses Louise and Olivia Pound.

Miss Vera McLaughlin of Butte, Nebraska, was recently married to Charles J. Tomek, deputy treasurer of Boyd county. Mr. Tomek was formerly a student at the University.

Miss Alice Loomis of the Home Economics department left for Chicago the first of the week. She will visit the University of Minnesota at Minneapolis, the University of Illinois at Champaign, and the University of Wisconsin at Madison.

Dr. Allison Dugdale of New York City, a graduate of the Medical College, stopped in Lincoln, Monday. Doctor Dugdale returned three weeks ago from Paris, where he has been connected with a hospital of relief.

Mr. and Mrs. C. G. Crittendon and daughter, Cornelia, entertained the members of the cast of "The Easy Mark," the Kosmet Klub play, at an informal dinner at their home Sunday evening. Clifford Scott, the composer, entertained the company with selections of the latest music, including the new Kosmet music. Professor Scott related a number of interesting and instructive incidents taken from his former stage experience. Bob Harley and "Lum" Doyle, who sang a duet, were forced to respond to several encores. All present reported a delightful time.

HARRY STUBBS as "T. BOGGS JOHNS" and BEATRICE MAUDE as "FLORENCE STONE" in "A Pair of Sixes."

At The Oliver Tonight, Wednesday, and Wed. Matinee

PROF. HOFFMAN WILL LECTURE IN WEST

Has Accepted Invitation to Address International Engineering Congress at San Francisco

Prof. J. D. Hoffman, head of the School of Mechanical Engineering at the University of Nebraska, has for some time been in receipt of an invitation to address the International Engineering Congress at San Francisco, in September of this year. He has decided to accept the invitation and is now busy preparing the paper, which is to consider the historical development of vacuum heating systems, and in addition will make an exhaustive comparison of vacuo-vapor machinery and appliances. The invitation comes as a distinctive honor to the Nebraska Professor, as the Congress is strictly international in character, for, according to present count, twenty-one different countries of the world will have representatives present.

The International Engineering Congress is to be held under the auspices

of the five great national engineering societies, namely, the American Society of Civil Engineers, the American Institute of Mining Engineers, the American Society of Mechanical Engineers, the American Institute of Electrical Engineers and the Society of Naval Architects and Marine Engineers. The president of the Congress is Colonel G. W. Goethals, who has consented to preside in person over its general sessions. The various papers presented in its special sessions will be grouped into ten sections, and each section will have a printed volume of its transactions and papers for distribution to the libraries of the world.

In the section including the subject of heating and ventilation provision has been made for only six papers upon this particular subject, one of these being that of Professor Hoffman. An American was selected for the treatment of vapor heating systems because in northern United States, as nowhere else in the world, has this type of heating system been so rapidly developed. Ten years ago practically

no such systems were in use, and it was the rule to design and install steam heating plants as simple direct pressure systems operating with thermostatic control, on four or five pounds pressure. Today, however, it is just as customary to design much more flexible plants with elaborate vacuum or vapor provisions for circulating the heating medium at extreme variations of pressure or vacuum. It therefore seemed particularly fitting that such history and development be treated by one having every opportunity to know it most thoroughly, and Professor Hoffman has certainly had such opportunity. The qualifications most probably responsible for his selection are his work as past president of the American Society of Heating and Ventilating Engineers, his first hand knowledge and observation of the development of the vacuum heating industry, and his reputation as an engineer and author.

WAR SUMMARY

The latest reports from Berlin assert that Field Marshall von Hindenburg has been completely victorious in his third battle with the Russians around the Mazurian Lakes in East Prussia, capturing 40,000 Russians and large quantities of stores. Prussia is now said to be clear of the Russian forces.

The Russians have also completely evacuated Bukowina, according to reports originating in the Austrian foreign office, but the Petrograd war ministry asserts that they are holding their own all along the eastern line.

David Lloyd George, chancellor of the exchequer, speaking before the Parliament hinted at further aid on the side of the allies from countries not now engaged in the war. He stated that the allies had brought into action up to date only one-third of their strength, and that to throw the other two-thirds into the field and maintain them would involve an annual expenditure of 2,000,000,000 pounds. He further said that Great Britain was ready to finance any who might come. The entrance of Portugal in the war is regarded as imminent.

Canadians were worried by reports that hostile aeroplanes had crossed the border from the United States and were proceeding in the direction of Ottawa, where the Parliament sat in session.

But two days remain before Germany will carry into effect her order for a submarine attack against enemy merchant vessels.
