

Summer School Nebraskan

VOL. I.

UNIVERSITY OF NEBRASKA, WEDNESDAY, JULY 12, 1916.

NO. 16.

THE ESSENTIALS IN THE TRAINING OF A TEACHER

(From an article in "School and Society" by G. W. A. Luckey.)

"In the making of a teacher the thing of chief concern is the making of a man, a man who feels keenly, thinks clearly, acts nobly, and aspires to live truly. It is only out of such material that the true teacher can be made. Teaching is enabling others to see and feel what you see and feel. It is living truly and putting the dynamics of such a life into the lives of others. It is the process of implanting into the souls of others worthy desires and lofty aspirations that will survive the wrecks of time. To accomplish this object we should begin early. We can not begin too early. I would start with the cradle roll, follow sympathetically every step and movement in the growth of the individual, surround him with an environment full of interest, but clean and wholesome. I should desire that my subject be possessed of good health and a good inheritance, but as for the rest I should be willing to accept the responsibility.

"To understand and intelligently direct the growth of a plant or an animal, one must become familiar with its life history. This is even more true when applied to the education and development of the individual. To become a true teacher one must become a true leader of men. But his problem is still greater; beginning with the immature, he must so shape their growth and development that when they reach maturity they shall in turn become true leaders of men. In order to do this one must know the meaning of life, the nature of the individual and the end to be sought, and the means to that end. He must have a definite philosophy of life; one that explains the meaning and purpose of man, the facts and fancies, the ideas and habits, the beliefs and aspirations, that make up his physical and spiritual existence.

"In the development of the individual there are three important stages which I can barely mention: childhood, from birth to twelve or fourteen; youth, from fourteen to eighteen or twenty; early manhood, from twenty to twenty-four or twenty-six. The first is chiefly physical and selfish, a period of promiscuous gathering; the second is a period of transition, both physical and psychical, the breaking up of old and the taking on of the new ideals, generalizing, organizing, idealizing; the last period is one of specialization, of balancing, weighing, selecting and entering upon one's life work. The mind acts so differently in each of

TICKET SALE FOR PICNIC CLOSES AT NOON

All tickets for the University Picnic must be purchased before 12 m., today. All persons selling tickets are requested to check in with Mr. Morgan, chairman of ticket committee, in the Student Activities office between 12:30 and 2:00. An accurate check as possible on the ticket sale is absolutely necessary as a guide to the refreshment committee.

NEBRASKA ENGINEERING GRADUATE HONORED

W. G. Wohlenberg Will be at University of Montana

Walter G. Wohlenberg, M. E. '10, has been appointed assistant professor of Mechanical Engineering of University of Montana at Bozeman. To accept this position he resigned from the University of Oklahoma, where he was assistant professor of Engineering. After graduating in 1910 he was employed by the Westinghouse Machine Co., and was also research man at the University of Illinois.

"MOVIES" AT CONVOCATION

On Monday the audience at convocation were entertained by a moving picture film showing the Niobrara river near Valentine. Several beautiful falls were shown and the excitement of shooting the rapids was pictured. The film was one of those prepared by Dr. Condra for the State Conservation Department.

AN EFFECTIVE REMEDY FOR ANTS

In fighting household ants no one measure can be recommended that will afford satisfactory relief from these pests in all cases, as the procedure must be adapted largely to the individual case. The following formula, recommended by the Department of Entomology of the College of Agriculture, has, however, proved to be effective in many instances:

Dissolve five pounds of sugar in one and one-half pints of water in a double boiler and heat gently. Add one-fourth ounce of sodium arsenite dissolved in a little hot water to the syrup. Moisten a sponge in this syrup and place in a pint screw-top glass jar with the porcelain cap broken out and four large holes punched in the lid with a twenty-penny nail. The sponge should about half fill the interior of the jar. Prepare anywhere from one to six of such jars and place them where the ants are foraging.

The worker ants will forage greedily on this for some hours, after which

CONVOCATIONS

Thursday, July 13—Professor Caldwell, illustrated lecture on "American History."

Friday, July 14—Professor Conklin, "Parlez-vous Francais."

UNIVERSITY LOSES ENGINEERING PROFESSOR

Professor Adendorff Accepts Position at Syracuse

Prof. John Adendorff has resigned from the department of Practical Mechanics in Mechanical Engineering College and has accepted the position of assistant professor of Machine Design and professor of shops at Syracuse University, Syracuse, N. Y. The University regrets to lose Professor Adendorff. He has made many friends in the past two years.

LAST GERMAN CLUB MEETING FRIDAY

The German Club will meet Friday evening at 8 p. m. in Faculty Hall as usual. Since it is the last meeting of the summer, special effort will be made to spend the evening pleasantly.

EX-SUPT. BISHOP WRITES TEXT BOOK ON CORN

Former State Superintendent E. C. Bishop is in Lincoln working on a text book on corn, which he is preparing for Dr. Condra's industrial textbook series. Mr. Bishop is at present in charge of the Junior Agricultural work at Ames Agricultural College.

PROFESSOR'S SON WALKS 1,000 MILES

Launcelot Gowen, son of Dr. H. H. Gowen, professor of oriental history, literature and institutions in the state university, walked from Berkeley, Cal., to Seattle, a thousand miles, at the close of the college year this spring. Mr. Gowen was one of a party of six who left Berkeley, May 18. One by one, as they reached their home towns, they dropped out, and Gowen finished the last stretch, from Portland to Seattle, alone. Mr. Gowen was graduated in May from the University of California, with the degree of bachelor of arts in architecture.—University of Washington Press Bulletin.

TERRIBLE BLOOD-SHED IN PHYSIOLOGY LABS.

The Home Economics girls are "counting blood." Professor Thompson appears rushed and worried for the girls are too timid to perform the operations on themselves. Miss Ada Johnson and Miss Hompes are heroines for they have ably assisted Professor Thompson. When the class started there were a number of boys attending but they must have been overworked for they have dropped the course.

Seven University of Washington football players have been called to the colors as national guardsmen.

BASEBALL GAME AT PICNIC TODAY

KEARNEYITES TO BATTLE WITH PERUVIANS

First Cars Leave Tenth and O Streets at 4 O'Clock—Many Classes Are Excused

That great interest is being aroused concerning the Picnic is shown by the fact that many classes are being excused to enable people to attend.

One of the interesting and entertaining features of the Picnic will be a game between the Peruvians and the Kearneyites, to take place probably after the "eats" are served. All the hundred Peruvians in school should rally to the support of the club.

The ticket sale close at noon today. The ticket committee desires to get an accurate check on the attendance as early as possible.

The schedule of cars is as follows: To Epworth Park. Special cars at 4 p. m. Cars every ten minutes from 4:25 till 6:15. Return trip no special cars. Cars every ten minutes from 7:35 till 9:25. All cars leave for the park from Tenth and O streets.

The lunch will be served at 6:15. The refreshment committee promises a good feed, but urges the necessity of buying tickets early so that an estimate may be obtained on the attendance. Ice cold lemonade and brick ice cream will be sold on the grounds. The original intention was to serve box lunches but the cost of paper and the high admission charge made it impossible.

A field meet with a variety of entries and various other methods of entertainment have been worked up by the entertainment committee. The heat will doubtless prevent vigorous amusements early in the afternoon, but the park will be open to University folk any time in the afternoon. It may be reached easily by Hospital cars, which run every twenty minutes starting on the hour from Tenth and O.

Alumni in the city are especially urged to attend the picnic and to get in touch with the summer school.

DEAN STOUT PREPARES ENGINEERING NEWS LETTER

Dean Stout of Engineering College, is preparing for mailing the fifth annual news letter to graduates and former students of the Engineering College. About 800 copies are being mailed. The college of Engineering is sending a neat descriptive bulletin of Engineering College to the high school graduates of this year.

Dr. Weaver at present is carrying on investigations in prairies of Nebraska in co-operation with Mr. Albert F. Thiel of the University of Minnesota, who is carrying on parallel investigations in Minnesota prairies. Mr. Thiel will attend the University of Nebraska next year.

Among the Summer Students

SUPT. W. R. PATE OF ALLIANCE

The western section of the state has a representative in the summer session in Supt. W. R. Pate of Alliance. Superintendent Pate ranks high among the educators of Nebraska, a reputation which he has earned through

steady, consistent and progressive work in various public school systems of the state.

He is a native born Nebraskan, Western being his native city. After attending the schools at Trenton, Nebraska, where he graduated, he at
