

CODE BILL INSURES AGAINST NEGLIGENCE

(Continued from Page One)

erendum, and direct primary; second, especially in city government, to throw away the old council system, adopt the city commissioner system, and city manager plan. In the former there is a more direct division of responsibility than in the latter.

"Usually when there is responsibility, it is distributed all on the side of the legislature. The city commissioner form of government is a sort of mixture between administrative and legislative responsibility. They have taken a stick and stirred the administrative and legislative departments together. The judicial department is not involved in the code bill.

"The code bill concentrates administrative functions only. What three men can do, one can do, and vice versa, but in spite of this, responsibility is involved, which is indefinite in the case of the three men.

Opposition to the Code

"The next opposition to the code bill is that it will vest in the governor the power to build up a political machine to further his own and his party's interests. He should make the machine accept the responsibility for the work he is doing. Old political machines could not be made up in the open, but now if it is really honestly and constructively built and has good motives, its functions are materially changed from those of by-gone days, and the public does not suffer from any unduly severe measures.

"Some people say: 'There is so much in the code, that nobody knows what it is.' This is the real difficulty. We do not know exactly how to get the people to vote on 512 pages of law with the real intelligence that citizenship enjoys. It is very difficult to demonstrate that twenty pages of this volume constitute the whole subject matter. Idaho and Illinois, with an unsuccessful attempt in Minnesota, have been the only states to adopt the civil code plan.

"There are some men who wonder what will be the result of the code on laws already passed in the present session of the legislature. The Blue Sky law as adopted was written in the code and was also passed as a special and separate act. If it comes to referendum, there would be none on the new legislation embodied in the code. The new road law, motor vehicle law, and amendments to the banking laws, insurance code, and state health laws are examples of other measures with the same status as the Blue Sky law.

Departments Run Smoothly

"Under the new civil code bill there will be no disturbance of the functions of any of the departments except as will be expected under any reorganization. There will probably be no insurance commissioner under the new organization. The secretary of commerce will have charge of this work."

Senator Peterson closed with the statement that he always regarded any statement he made as a failure, unless there was a question mark in the minds of the listeners. After this remark, a period of discussion followed in which he answered several queries propounded by the students.

DEAN LINN SPEAKS ON "EDUCATIONAL FANCIES"

(Continued from Page One)

Classics have been almost entirely discarded. They apparently no longer appeal as strengtheners. Logic has also gone. It is studied only occasionally. Mathematics is gradually disappearing. It is possible to enter the university with only two years of it and students are not forced to take any more. Now it is science which especially strengthens the mind.

Must Be Trained

"Education is not the training for the job as the vocational schools produce more machines. Therefore it must be the training for a social being. There has never been a bigger or more interesting world than now and things have never been so vital. The individual must be trained to take his position in the affairs of the human race as a social being."

"What place has scholarship in education? What right has it to exist? Scholarship has a right to exist as far as it bears on technique and science. In October, 1919, by carrying on a series of experiments Professor Molton succeeded in increasing the range of five-inch shells, seven miles and

the activity eight times. The government sent over 30,000 of these shells to France and they arrived November 13. Scholarship contributed greatly in science to the winning of the war.

Dean Linn concluded speaking about the economic position of the teachers. Twenty-five years of teaching has brought me to this conclusion that from the economic viewpoint one should not enter into the profession unless for the love of it.

R. O. T. C. SUMMER CAMP AT FUNSTON JUNE 21

(Continued from Page 1)

of miles from school to camp. Sub-sistence will be furnished during the camp.

Due to the large amounts of ma-

terial now at the camps, the courses which will be offered this year should be very interesting to those who are concerned with military tactics. Students who contemplate taking the advanced course in the R. O. T. C. will no doubt find this training a great help in that work and should make an especial effort to attend the camp this summer.

STUDENTS HEAR TALKS AT DRILL HOUR MONDAY

Instead of drilling at the usual period Monday evening, May 5th, the members of the R. O. T. C. unit were marched to the Temple where Colonel Morrison and Captain Frankforter gave talks.

Colonel Morrison announced that

as the district inspector would be here Thursday, May 8th, drill would be held that day instead of at the usual hour Friday. He also told the men that steadiness in ranks is absolutely essential to perfect discipline, and when the inspection occurs Thursday this should be rigidly watched. He told the students something of the history and nature of the R. O. T. C. work as distinguished from the Students Army Training Corps and then urged all who could to major in military science and to attend the summer camp at Camp Funston which begins this year the last of June and students army training and then Milage to and from camp will be extends for a term of six weeks, paid, as well as 40 cents a day for rations.

Captain Frankforter made a few suggestions to the unit after which the names of all delinquents were read.

AIRPLANE AND MACHINE GUN FOR WHALE HUNTING

With his airplane equipped with a machine gun, an army lieutenant recently went out on a whale-hunting expedition. Flying at an altitude of about a thousand feet above the Pacific ocean, the airman saw his quarry about four miles out at sea, and swooped down before the great animal could submerge. A short round from the machine gun was sufficient, and a motorboat was soon on its way to pick up the carcass, which yielded the hunter a considerable profit.—Popular Mechanics Magazine.

The Union Suit That Pleases You

Men differ. Some prefer cotton, some worsted; Some like a light weight, some a heavy. One man favors a long sleeve, another an elbow length.

To help you decide what you want, we have written below a description of several styles.

These garments possess one feature in common. All have the famous Globe Trowser Seat and Elastic Gusset.

This guarantees to each a superior degree of comfort. In the diagram right above is shown an arrow pointing to this gusset. This is the way it works. When you bend or twist the gusset stretches preventing disagreeable binding or drawing so common in ordinary suits. A simple idea, but a great one.

The fabric is treated by the GLOBE secret process.

GLOBE

Trowser Union Suits will not shrink

Globe medium weight cotton. Absorbent and sanitary. Just the weight for business men and for those who do not require heavy weight underwear. It is favored by many just before real winter sets in.

Globe heavy weight cotton. While heavy it does not wash hard and boardy. Unlike most cotton underwear it will retain its softness until the garment is worn out. Men who wear heavy underwear appreciate this feature.

Globe medium weight worsted. At a popular price. Many men wear this weight all through the winter. Others use it before the weather gets real cold. It gives excellent service and will not shrink.

Globe heavy weight worsted.

Economy is the watchword of the hour. This is the best part wool underwear we know of at the price. Has plenty of warmth and will give at least two seasons wear.

Globe best quality medium heavy weight worsted. For men who like the luxurious feel of fine underwear. We recommend this to business and professional men and others who require warm underwear that is not heavy. It will not irritate and will not shrink.

Globe best quality heavy weight worsted. For men who are outdoors a great deal and those who suffer from the cold. This differs from most wool underwear. After it is washed it does not feel like a blanket but retains its original softness and shape. It does not shrink.
