Shows start at 1, 3, 5, 7, 9 P. M.
Mats., 15c—Night, 20c—Chil. 10c

It is becoming commonly known that the poorest housekeepers are the women of California.

GEOLOGY, GEOGRAPHY AND CONSERVATION COURSES COMBINED

Departments Re-organized Under One Head—Great Increase in Enrollment

There has been a complete reorganization in the departments of conservation, geology and geography, at the university. These departments formerly all housed in Nebraska hall have now changed somewhat in location. The geology department will have its offices in the museum building, the conservation work will be done on the first floor of Nebraska Hall and the geography work will be accomplished on the second floor of the same building.

Until this year the department of geology has been separate from the joint department of geography and conservation. This semester marks a change in the grouping of these courses. One branch will be known as the department of conservation and university survey, and the other as the department of geography and geology.

Professor Barbour, for a great many years connected with the University of Nebraska as head of the department of geology, will now be chairman of the combined departments of geography and geology, and director of the university museum. Professor Barbour was also formerly director of the state geological survey, and for many years has had charge of the museum at the university.

Professor Bengston, who returned week from governmental research work in Europe, is the ranking man in the geography work at the university. Miss Esther Anderson is also an instructor in geology courses.

Many Take Geography

The registration figures in all of these departments are incomplete, but there are 100 students enrolled in the geography course proper, which is somewhat smaller than usual due to rearrangement of the departments.

The department of conservation and surveys is not doing undergraduate work this semester. It will conduct studies in research and university survey work. A large number of graduate students are taking these courses. This combined department has charge of the state's resources, conservation problems and industries. Soil survey work is emphasized. Most of the work in the department is done in co-operation with the Federal government. Dr. G. E. Condra is director of the survey, and has the aid of twelve assistants. The university surveys have always been centered in the department of conservation at the university.

Nearly forty bulletins have been issued by the department, one of which was just completed this week. The current bulletin, now being read throughout Nebraska, deals with the most familiar trees of this state.

Nebraska hall has been almost completely rearranged in order to accommodate the changes necessary to the complete reorganization of the departments. The old geography laboratory has been transformed into a bulletin room, and a display room for all survey work. Professor Shoemaker, who has charge of the still picture work of the department, will have his working room and office at the extreme east end of the main hall on the first floor. Over 200,000 feet of film are held on reserve in the billing room for films on the east side of the buildings. Next to Professor Shoemaker's office is the office of Professor Rockie, and the manufacturing room for motion pictures is located to the west of this office. Other rooms on the first floor are the drafting room, general offices for the department, survey equipment room which was formerly a display room for soils and maps, and a film testing room and lecture room for visiting speakers.

On the second floor the newly completed studio will be changed into a lecture room, and a new studio will be constructed. The testing room will become the geography laboratory, the motion picture printing room will become Miss Anderson's office, and the publicity room will serve as a library for geography. The laboratories for road materials and soils will remain in the basement of Nebraska Hall.

WANT ADS

For good dance music, call Blazek, L5223.

Students photos at special prices. Blazek's Studio, 1308 O street.

For Music call Cliff Scott, B-1482.

LOST—Men's ring, engraved H. H. S. '19. Finder leave at S. A. office. Reward.

The House of Kuppenheimer Clothes

Whether you're a Freshman—a "Soph," Junior or Senior, you'll want to be one of the best appearing men on the campus now that these good old days have started again. Entirely new and distinctive novelties designed particularly for young men are being shown here in suits and overcoats. They're

Kuppenheimer Clothes

—just the kind you well-dressed young fellows like—new style turns that will set the fashion-pace at school, at home, in fact, all over America.

One of the biggest hits of the season is the new belted suit. Here you can choose from a large variety of single and double-breasted belt effects in many different style variations, smart patterns, value giving, all-wool fabrics, and pleasing color-tones.
Prices \$35 to \$75. Extra values at \$50

Of course you'll want to include an overcoat in your wardrobe. These smart Kuppenheimer coats are the newest of the new, possessing the characteristic Kuppenheimer elegance in everyline, every detail. The biggest style-hit is the new all-around belt model produced in many different single and double-breasted styles.
The price range is \$35 to \$60. Special values at \$40

ABOUT THE CAMPUS

Dean C. C. Engberg believed that a printed announcement program would kill the very purpose which the bulletin board serves, namely, that of attracting students to read the announcements. He does not believe that a busy student would take time to scan a list of printed notices covering affairs of the entire university. He is in favor of a poster of regulation size and believe that this feature would add to the attractiveness of the bulletin boards without killing the opportunity for individual and artistic expression.

Professor Gruman of the Fine Arts department says, "I am very anxious to see a uniform bulletin board for they are both cheaper and neater than the bulletin boards of the present." The bulletin boards of the past have been an unsightly mass of notices pasted and nailed upon each other. Because of the topsy turvy ef-

fect, few students take the time to discover the new notice hiding among those of last week and last month. Consequently many interesting convocations have a poor attendance through a lack of proper advertising.

A well printed bulletin containing notices from the different departments of the University together with those of the different student organizations will be much cheaper and will reach a larger number of students than our bulletin boards of the present.

Prof. H. W. Caldwell says: "A uniform bulletin board would be very valuable and certainly worth while. Much more advantageous to the faculty and student than the present one."

Prof. Hutton Webster: "I would welcome a uniform bulletin board. It would be a fine thing for the school. Present arrangement is very inconvenient." He further states, "that at Leland Stanford a uniform bulletin board is used there, one part which is covered by glass,

being used for the formal and faculty notices, and the other part open for student and campus announcements."

Prof. W. F. Dann: "The great trouble has been that notices could not be properly placed before the students. Now that the campus is being extended the need is greater than ever for a uniform bulletin board. It will be convenient to both faculty and students to have notices in one place. Besides serving the purpose as a bulletin board it would be an ornament to the campus and it would have the effect of rendering unnecessary and monstrosity that at present does duty as a bulletin board."

Prof. Cochran's heartily in favor of it. "I favor it highly," he states. "The present arrangement is a combination of horrible art. A uniform bulletin board is a necessity. Then it would be the duty of a person appointed to look after this board, keeping it up to date. Notices have re-

mained on the bulletin board for weeks at a time.

J. A. Balderson, C. E. '11, has been placed in charge of the compiling and keeping of valuation records for the Chicago, Milwaukee and St. Paul railroad. These important records are required by order of the Interstate Commerce Commission. Mr. Balderson was formerly employed in field valuation work.

Prof. M. S. Ketchum, who has appeared before University audiences upon several occasions, has resigned his position as dean of the Engineering College of the University of Nebraska to become head of the department of Civil Engineering at the

Dean Le Rossignol of the College of Business Administration yesterday expressed the opinion that the size and color of announcements appearing on University bulletin boards could be satisfactorily regulated by custom. He stated that he thought that the announcements now appearing are often out of proportion to their relative importance.
