NEBRASKA MANUFACTURERS TO VISIT UNIVERSITY TODAY

Nebraska Association Representatives to Make Trip Over Campus.

A committee from the Nebraska Manufacturers Association and another committee from the Lincoln Manufacturers Association will visit the University today. These committees have been appointed by their respective associations to confer with the chairman and staff of the Mechanical Engineering Department regarding co-operation between the manufacturers of the state and the Mechanical Engineering Department. The committee from the Nebraska Manufacturers Association is composed of C. B. Dempster of the Dempster Mill Manufacturing Co., Beatrice; C. D. Marr of the Fremont Foundry and Machine Co., Fremont; and H. E. Gooch of the Gooch Milling and Elevator Co., Lincoln. The Lincoln Manufacturers Association committee comprises Prof. O. R. Martin of the Lincoln Brick Works, and O. J. Fee of the Evans Laundry Co.

After the inspection of the laboratories of the Engineering College, these committees will have luncheon at the Lincoln Chamber of Commerce. The Chancellor, the Dean of the Engineering College and the members of the several engineering departments have been invited to attend the luncheon with the members of the Mechanical Engineering Department, and to discuss ways in which all engineering departments as well as the Mechanical Engineering Department can co-operate with the manufacturers of the state.

The Mechanical Engineering Department is making special efforts to prepare its graduates for positions in the manufacturing industries. Two-thirds of the members of the American Society of Mechanical Engineers are connected with manufacturing enterprises. The importance of manufacturing in the United States is evidenced by the fact that as many people are engaged in manufacturing as in agriculture and these two occupations make up considerably more than one-half of the population. Heretofore, the larger proportion of the mechanical engineering graduates have left the state to find positions with the larger manufacturing plants in the east.

It is hoped that this condition will be reversed, the majority of the mechanical engineering graduates finding positions with manufacturers here in Nebraska. It is only by building up their manufacturing industries that Nebraska can compete in growth of population with other states of the union.

MAT SCHEDULE ATTRACTIVE

(Continued from Page One)
 Dates Not Definitely Settled.
 Although the contracts for these meets have been signed, the dates for the contests have not been definitely scheduled. Men who make the team will be assured of two good trips during the season. One hour credit is given for the wrestling class which will meet this winter in addition to the team honors. However, it is not necessary to be a team member in order to receive credit for training in wrestling. The exercise given by training in wrestling is considered especially beneficial.

Several men who won their "N's" in wrestling last year have returned this year and prospects are bright for a successful season. Among those who took the work last year, won honors and have returned are: Salter, Votopka, Long, Sandstedt, Pickwell and Hoyt.

Dr. R. G. Clapp is president of the Western Intercollegiate Gymnastic and Wrestling Association which will hold its annual meet at Indiana University this spring. The Husker wrestlers will have a chance to meet there such teams as Wisconsin, Illinois and other teams from the Big Ten.

BASKET-BALL MEN BUSY

(Continued from Page 1.)
 Coach Schissler hopes to arrange some games with outside teams for the Freshmen if the Missouri Valley Conference changes their ruling in regard to this matter. The first practice of the season will be held Saturday at 1 o'clock in the Armory. Every Freshman interested in basketball is expected out at this time. On account of the shortage of suits each man will have to furnish his own outfit until the regular squad is picked when the regular Freshmen suits will be issued.

CORNHUSKERS SALES SHORT

Continued from page 1
 It is surprising how little the students and faculty members have been solicited now. One student went into the student activities office and asked if he might subscribe for the Cornhusker but because of the fact that the campaign has been turned over entirely to sororities and literary societies, he was sent away.

Few are Escaping

The weather was improved considerably Wednesday so that canvassing on the campus was made possible. Every student or other who has subscribed should wear his tag to identify himself and save the solicitors the trouble of stopping him and asking him for a subscription.

The three big prizes and the two special offers are still good and can still be won by any organization that has a will to work. The prizes of \$75, \$50, and \$25 will be awarded to the three organizations having the most subscriptions when the campaign closes, at 6 p. m. Saturday. The special offer for a skin to the organization with the largest number of subscriptions in by Thursday night will be announced tomorrow.

Every organization that subscribes 100 per cent will have its name published and will receive a Cornhusker free. It is up to the students to get behind the Cornhusker sales campaign and put it across to insure the success of the book. Wear a tag if you have it and get tagged if you do not have one.

REGENTS FAIL TO DECIDE

(Continued from Page 1.)
 director of the University summer school.

The Memorial Gymnasium Fund.

The recommendation of Chancellor Avery that a cash contribution for the soldiers' memorial gymnasium be requested from the state, contingent upon the raising of a certain fund by the memorial committee, was approved tentatively by the Board. If this recommendation passes the Governor, if a certain amount is raised among the people of the state a similar amount will be donated from the state budget.

"A good standard of salaries will enable the University to hold better men and to make the University a place which the brightest men in the country will seek rather than seek to get away from," Chancellor Avery declared.

"Nebraska is able to pay its state officers salaries which are not low in comparison with salaries paid by other states and it is the object of the Regents to pay the state officers represented in the University faculty salaries which compare similarly to other states. In view of this fact all building and unnecessary expansion will be curtailed to an extent with a reasonable regard to the interest of the taxpayers."

You may bawl out a cheer leader, but remember that he has more fun for less money than a pyromaniac in Hades.—Omaha Bee.

SERIES OF TRACTOR TESTS COMPLETED AT UNI FARM

Engineering Department Stages Number of Experiments with Machines.

A series of interesting tractor tests has just been completed by the Agricultural Engineering Department at the University of Nebraska farm.

The tests were made as required by the Nebraska Tractor Law, known as House Roll 85, 37th Session.

The law says, in effect:

1. That a stock model of every tractor sold in the state shall be tested and passed upon by a board of three engineers under State University management.

2. That anyone offering a tractor for sale in the state shall have a permit issued by the State Railway Commission. The permit will be issued only after a stock model of the tractor to be sold shall have been tested at the University and its performance compared with the claims made for it by the manufacturers.

3. That a service station with a full line of repairs for each model shall be maintained in the state and within reasonable distance of the consumer.

Purpose of the Law.

The law is intended to encourage the manufacture and use of better tractors in the state and to aid farmers and dealers in the selection of suitable machines.

Many and Varied Tests.

The tractors are delivered by the manufacturers to the University Farm where the tests are conducted under the supervision of Fred R. Nohaver. The tests cover performances at the belt and on the drawbar, with varying loads and using the lower grades of fuel. There are nine tests in all.

Belt Tests.

The belt tests are made with a Sprague electric dynamometer of 150 H. P. capacity. This dynamometer is driven through an extension shaft mounted on ball bearings and carrying a paper pulley, 10 inches in diameter and with a 12 inch face. The tractor under test is belted to this pulley. The University furnishes the belts, although the manufacturer may provide one of his own choosing if he wishes.

Drawbar Tests.

The drawbar tests are made on a half-mile cinder track near the Agricultural Engineering building. The track has several short grades and is kept in uniform condition by rolling, sprinkling and grading.

A dynamometer car or loading machine is used to provide a constant load. However, this machine will permit of varying the loads for different sized tractors.

The loading machine is an Illinois tractor chassis with a Sprague electric generator mounted in place of the engine and driven by power from the wheels of the machine when pulled by the tractor being tested. The drawbar load can be adjusted by adjusting the load taken from the generator. The drawbar pull is registered by a traction dynamometer, attached between the loading machine and the tractor under test.

The reports were made to the State Railway Commission. Anyone can purchase a report of the tests from the Agricultural Engineering Department, U. of N. Farm.
