

SPORT BRIEFS

All interest in sports is now centered on the world's series. The first game between the New York Yankees and the New York Giants for the championship of the world will be played today. Only one thing can be safely prophesied: the titular flag will go to a New York team.

Monte Munn and "Terrible" Thompson will not play with the Scarlet and Green during this season. This is a decided setback for Dawson's prospects. Munn's predicament is due to an infected practice wound while Thompson is ineligible on account of scholarship difficulties.

Interest in high school gridiron games is this week centering on the Clay Center-Cambridge clash. This is the first inter-sectional clash of the year and should be a good game from whistle to whistle. The Ansley-Alliance fray will be another hummer while Lincoln high will undoubtedly

have her hands full with York. The Haskell Indians are the next opponents on Dawson's chart. If the Indians have any such team as they had in the old days, the Huskers are due for a stiff game. The strength of the old Redskin team is well known by local gridiron fans and many are prophesying that the Nebraska-Haskell scrap will be a thriller.

The fact that Pittsburgh met defeat last Saturday does not at all mean that she has a weak team. Flukes are by no means uncommon in football and Pittsburgh has a strong team in spite of their early setback. The Huskers will have their hands full when they encounter the Panthers in Pittsburgh on November 5.

COLLEGE HAS TWO NEW PROFESSORS

Professor F. E. Wolfe is the new professor of statistics in research, in the college of business administration. He is giving a new course in statistics which should be of interest to members of the department of political science and sociology, as well as business administration. Courses in fire

insurance and life insurance formerly given by Professor Kirshman, will be in charge of Professor Wolfe. The courses formerly given by Professor Virtue in railway economics will be in charge of Professor McNeill. Prof. McNeill has been for the last two years connected with the transit department of the New York public service department.

Gertrude Patterson '23 leaves Wednesday for Grand Forks, North Dakota where she will be present at the installation of North Dakota Alpha chapter of Pi Beta Phi.

A Gateway—Electrical

ONLY a forty-foot gateway bounded by two brick pilasters and ornamental lamps, but it is unlike any other gateway in the entire world.

For back of it is the General Electric Company's main office building, accommodating 2300 employees. And just next door is its main laboratory with the best equipment for testing, standardizing and research at the command of capable engineers. Then down the street a mile long—are other buildings where electrical products are made by the thousands of electrical workers who daily stream through.

Through this gate messages and representatives from a score of other factories and over fifty branch offices come and go every hour—an endless chain of coordinated activities carrying on and enlarging the scope of over a quarter century's work for the betterment of mankind.

What a story this gate would tell, if it could, of the leaders of the electrical industry and of ambassadors from other industries and institutions—and from foreign lands. The story would be the history of electric lighting, electric transportation, electrified industrials and electricity in the home.
