W. S. G. A. PLANS VOCATIONAL TALKS

Opportunities for Co-ed Graduates Will be Discussed—Helen Bennett to Speak.

The Woman's Self Government society has completed plans for a series of four vocational talks to be given at Ellen Smith hall for all university girls. As part of the program of the national organization of W. S. G. A., these lectures are given to offer suggestions to girls who have not decided upon a field of work after college.

On November 16, Mr. M. G. Wyer, university librarian, gave the first talk of the series, on "Library Work for Girls." The divisions of library work, its opportunities for social service, and the means of entering this profession were presented by Mr. Wyer.

One talk will be given each month to bring before college women subjects of special interest to them. Specialists in each particular line of work will speak upon "Openings for Girls in the Field of Science Service, Institutional Management, and Social Service." A joint meeting of W. S. G. A. will be held for the talk on social service.

Miss Helen Bennett of the collegian bureau of occupation of Chicago, will be here for two days at some time in the second semester. She will give general talks on vocational opportunities at a special convocation and at a luncheon. Individual conferences will be held with girls regarding personal problems arising in the selection of a calling. Miss Bennett has had wide experience in different lines of work and is well qualified to give practical help in each individual case.

The aim of W. S. G. A. is to present subjects of importance to every university girl. The committee on vocational talks states through its chairman, Ruth Lindsay, that it desires suggestions as to other subjects of

Nebraska Needs New Museum Large Enough To Hold All The Valuable And Rare Exhibits

By Wilbur C. Peterson.

A building, larger than any on the campus of the University of Nebraska at the present time, would not even commence to accommodate all of the interesting material which the university museum has stored in its campus buildings, in the basements of other campus buildings and in store rooms in the down part of Lincoln. Fully \$5,000,000 could be spent by the state legislature in equipping a building to take care of the museum and then there still be room left for much improvement.

Probably only about one out of every ten students who attends the University of Nebraska has taken time out long enough to go through the museum building just north of the armory. Yet without exception that is the most interesting part of the entire campus and has any building in the city of Lincoln if not the state of Nebraska outclassed so far as interesting contents go.

Everything from monstrous skeletons of primitive animals to petrified bones of the smallest of animals, are contained in the museum. Most of the material has been gathered from different parts of Nebraska, the bad lands of the western part of the state laying claim to a great share of the contributions.

Pile Atop Each Other.

The bones which are on exhibition in the building are so numerous that if they are to be shown at all they have of necessity been piled on top of the cases. In large museums in nearby cities, many of which have not nearly so many interesting material as that of the University of Nebraska the exhibiting bones and skeletons are displayed with splendid effect. This is accomplished because of the large amount of room which they have in which to exhibit the things while at the university museum the cases are so close together that not more than one person can pass at one time.

There is a museum at Pittsburgh which covers easily more ground space than any two of the campus buildings. The building runs three stories high and the exhibits are given more than enough room providing for that city one of the best advertisers it possibly could have. The stairways are large and broad. The rooms are large and each one contains a separate exhibition of a separate class of things, everything from fossils, skeletons of animals of the pre-historic ages, costumes worn by all people in different ages, instruments of war centuries since the first fight

interest. Should sufficient interest be shown in a vocation other than those to be discussed the committee will arrange for an additional lecture.

ing in which man engaged.

Nebraska Museum as Good.

The exhibits in the University of Nebraska museum are every bit as good as those in the Pittsburgh one. But because of the fact that the exhibits are contained in a rather unkempt looking building, few students ever enter it. There are some exhibits which outclass the Pittsburgh museum many times and taken all in all, the Nebraska exhibits are every bit as good.

And then if there was the building at the university to accommodate all of the exhibits the museum has, there would be many more interesting things which the University of Nebraska could get from time to time of which at present it cannot make use.

Would Advertise University.

A beautiful museum building, similar in design to some of the other attractive buildings on the campus, would be one of the best advertisers the University of Nebraska could possibly hope to possess. People from all over the state would make it a point to visit the museum as much as the state penitentiary and the state hospital, when they come to Lincoln for the state fair or other errands.

When they returned home they would tell of the things they saw at the museum much sooner than they would talk of the penitentiary or the state hospital. And more and more the museum would become known and soon the entire country would be looking at the University of Nebraska as possessing one of the best museums in the United States. Few museums have more interesting exhibits than does the Nebraska one.

Students Should Visit It.

All students in the University of Nebraska who have not visited the museum since their entrance into the university should make it a point to go through these most interesting of places in the city of Lincoln before they leave. Not a person goes through the exhibits once but what returns a second and a third time. While the building is not large in which the exhibits are contained, the quality and quantity of the exhibits is such that it is an almost endless job to properly visit the mall.

It can be truthfully stated that any student who goes through this building will immediately make it a point to advertise the museum and work to have a better and larger building built for it. A building four times the size of any building on the campus at the present time would not be large enough to accommodate all of the material which the museum owns but which are stored in different parts of the campus and city in the hope that some day soon there will be a building such as will justify the quality and quantity of the material contained therein.

When all of the companies have completed their firing, rifle teams will be picked for each unit and for the entire regiment. Intra-regimental matches will be held and the strongest men will be chosen for the team which will be sent to the national matches.

Colonel Mitchell, commandant of the Nebraska R. O. T. C., is making plans for some rifle matches to be held here at Nebraska in the near future. The Colonel himself is an excellent marksman, and the units which he has commanded have always had exceptionally strong rifle teams. Colonel Mitchell expects to put rifle shooting on as firm a basis as any of the other minor sports at the University of Nebraska.

TEMPLE BUILDING IS SCENE OF ACTIVITY

Few students realize that room 201 Temple is one of the busiest places on the campus throughout the whole year. It is here that the work of the university extension division is carried out. Professor A. A. Reed heads that great machine and is a very competent foreman. He edits the Uni Extension News, which is a small weekly bulletin dealing with the most important features of the week. They minimize the expense account by

maintaining their own stepographic department, including the operating of the mimeograph and dictaphone machines.

The board of regents and chancellor hope to bring the home and the university in closer touch through the efforts of the extension department. The work is divided into five groups. Educational service, instruction, lecture and entertainment, debating, and general welfare.

The educational service group have charge of the accredited schools here in Nebraska. They assist in the conducting of both the mental and educational tests. Nearly all the better schools of the country are now using the group mental tests to classify the average, the dull and the bright pupils. This is followed up with the standard educational tests which measure educational progress

The bureau of professional service, in co-operation with the United States employment service, maintains a free employment service for teaching positions, vocational work, and student employment. Last year calls came for college professors, supervisors, or highly trained teachers of all subjects, from thirty-nine different states as well as foreign countries.

Under the direction of the instruction department evening classes in accounting, marketing, economics, etc. are conducted on the campus and in Omaha. There are over 10 different correspondence courses available. The possibility and efficiency of teaching by correspondence study has already been demonstrated by practical experience in the extension work of the leading universities and colleges of both Europe and America. Citizenship education is not in name only.

More than 1,000 persons attended the local schools of citizenship (26-27) held in a number of Nebraska towns. There are schools for scout masters, athletic coaches, and study centers under the auspices of the education department.

It seems that the University of Nebraska faculty members are extremely popular as lecturers in Nebraska and the neighboring states. Calls for such lecturers are made through the extension department. They are prepared also, to provide special musical features and plays as a part of lyceum programs.

The general welfare department is of great use to the general public. It handles the package library service, provides lantern slides, motion pictures, reels, lists of readings, and sends out coaches for plays as well as programs for women's clubs.
