

THE DAILY NEBRASKAN

VOL. XXII—NO. 90.

LINCOLN, NEBRASKA, TUESDAY, FEBRUARY 13, 1923.

NEBRASKA HOST TO FOREIGN STUDENTS THIS WEEK

TEMPLE THEATER WILL ALSO BE USED FOR UNI NIGHT PROGRAM

Tickets Will Go on Sale from 1 to 2 for Students and 3 to 4 for Members of the Faculty—Same Bill Will Be Produced as Played at the Orpheum Theater.

EACH PERSON IS LIMITED TO ONLY FOUR TICKETS

Many Students Unable to Obtain Pasteboards at Orpheum When Theater Was Sold Out in Exactly One Hour—Temple Will Accommodate Five Hundred People.

Tickets for University Night were sold out in one hour yesterday morning at the Orpheum theater and the committee has secured the Temple Theater for Saturday night where the same production will be put on, enabling more of the University students to attend.

The Temple has a seating capacity of about 500 people and the seat sale will start at 1 p. m. sharp and continue until 2 o'clock for the students and members of the faculty can secure tickets from 3 until 4. Four tickets will be the limit that one person may secure. Students were in line as early as 8:30 in the morning to get the best seats at the Orpheum and it is expected that the Temple will sell out in a short time.

By using both the Temple and the Orpheum, Chairman Eller is confident that the majority of the student body that desires to go to the annual production will be able to get tickets at one of the places. This is the first year that this idea has ever been tried and it is an entirely new enterprise for the University Night Committee.

At a committee meeting last night the remaining few skits that are to appear on the program were gone over and from all indications it will be by far the best production that has ever been presented to the students. Sigma Delta Chi has promised a really snappy "Evening Shun" to top off the show with. The "Shun" management has made arrangements to that the little paper will be sold at both the Orpheum and Temple.

The complete program has not been given out as yet but it is pretty definitely settled that the skits already spoken of will be on the program. Chairman Eller expects to enlarge the tentative program somewhat and put one or two more desirable skits on. This will lengthen it some what but all of the skits have been high above the average that are put on at the University Night production and they were added chiefly for that reason.

Nebraskan Will Publish a Lenten Thought Every day

Lent begins Wednesday, February 14.

Beginning with the issue of the Daily Nebraskan for that date, thought appropriate to the season will be published each day under the caption "A Lenten Thought for Every Day." These will be in the nature of quotations from eminent authors or from the scriptures.

It is not intended that only those students whose churches celebrate the season should read these thoughts. They will be universal and literary in scope, so that all students of University regardless of creed may find them of interest.

Disabled Veterans to Elect Officers

A new commander and other officers will be elected at a meeting of Disabled Veterans at the clubrooms at 1123 M street at 7:30. All vocational training men are urged to attend, by those in charge. Refreshments will be served.

Dr. H. K. Hayes of the University of Minnesota delivered an address before the Agronomy club at the College of Agriculture, Thursday evening. The subject of his talk was Genetics and plant breeding and the talk was confined to the crossing of different strains of wheat. His experiments have been in breeding up a strain which is resistant to black stem rust and he has worked out some interesting facts along this line.

The great need of the day is not light without heat, but discussion of world problems without heat.

Another difference between death and taxes is that death is satisfied with one lick at you.

Noted World Traveler Visits Nebraskan Office Yesterday

Thomas A. Edison, the great inventor, has said that the modern youth is spoiled by his education. Today comes D. H. A. Z. Swackhanner, who says that the University student cannot answer the questions which he propounds. The Daily Nebraskan, wishing to give all the credit possible to the students of the University of Nebraska, is running the questions, which Mr. Swackhanner says they cannot answer, and the answers may be left at the office of the publication. The correct figures will be published in the near future, as soon as the returns have been tabulated.

Following is the questionnaire, which was left in the office by the learned statistician, who is dark in complexion, and who seems to be perfectly certain that he alone holds the secret of the solution of the problems which he has propounded.

Here are the things we like to know here are it. If the state mines 70,000,000 tons of coal last yrs how many cubic feet of gas. would it make.

pounds of tar, pounds of limes, ammonia, sulphur, pound of tunitlar.

gallon of light oil, gallons of shale oil.

gallons of togoul, dislates, shomgual.

mysol, these, comes out of any kind of coal, good for heating.

write these out in your paper the next issues.

yours truly D. J. H. A. Swackhanner Haytian Traveler of the world.

over, 900,000 Miles on land, and water.

Netearaiso, menainas, guninasiem as, detastastam.

Far be it from us to cast any reflections upon the learned gentleman, who furnished us with the supposed proof of the ignorance of the college youth, but we are inclined to wonder as to the practical benefits which will accrue to the person, shall succeed in finding the correct autanswer of the occult mysteries.

Anyone who doubts, however, the authenticity of the document may prove to himself that the thing was actually written by the world-famous traveler, if he will come to the office of the Daily Nebraskan, where the original of the problem is kept in trust for whoever may find the solutions of the problems.

SOUTHWEST MUSICAL CONFERENCE MEETS

2,000 Visitors Expected to Visit Kansas City From Oklahoma and Other States.

(Special to the Nebraskan)

Kansas City, Mo.—A Southwest Musical Conference, which will include the state of Missouri, Kansas, Arkansas, and Oklahoma, as well as other states in the southwest, will be held in Kansas City April 2 to 6, this year, S. J. Whitmore, vice chairman of the Convention Bureau, announced here today. The Conference will be under the auspices of the Missouri State Federation of Music Clubs, and is for the purpose of arousing interest in music in the southwest. More than 2,000 delegates and visitors are expected. It will be the Fifth Annual Convention of the Missouri Federation of Music Clubs.

During the convention Kansas City will stage a music week which will have a large number of attractive and interesting features. Among these, will be an all-day contest of children from federated junior clubs, in twenty-seven divisions and a young artists contest—the winners of which will go to the district contest, and if they are successful there to the national contest. Among the more important features will be a dramatization of Mendelssohn's "Elijah" which will be staged in Convention Hall.

Among the speakers will be Mrs. John F. Flynn, president of the National Federation of Music Clubs, and other national figures in the musical world. Local clubs and organizations will give contatas, concerts and recitals. An invitation has been extended to the membership of all the musical clubs in the southwest.

Color Tournament Starts Saturday

The first round of the girls color tournament in basketball, which is being sponsored by W. A. A., will be played Saturday, February 17. All girls who have attended eight practices will be eligible to be on the teams, which will be chosen Thursday, according to Lois Shepherd, who is the W. A. A. sport leader.

The captains will be chosen by Miss Clark, head coach, and Lois Shepherd. The captains will draw the names of their team members from hats.

The color tournament serves as a preliminary to the class tournaments which will be held later.

America might be more keenly interested in Europe's affairs if she could learn to pronounce the places where the rows start.

FOREIGN STUDENTS WILL SPEAK AT SPECIAL CONVOCATION AT TEMPLE

Will Tell of Tendencies and Movements Among the Young People of Their Respective Countries—Are Accompanied by Jasper King of Chicago, Representative National Student Forum.

WILL ADDRESS GIRLS AT VESPER SERVICES TODAY

Visitors Have Many Individual Characteristics and Have Had Many Experiences Which They Will Give to University Students at Various Meetings During Their Stay.

At the special convocation to be held Tuesday morning at 11 o'clock in the Temple, Piet Roest of Leiden, Holland, and Hans Tiesler of Berlin, Germany, will speak of tendencies and movements among the young people of their respective countries. Mr. Tiesler will speak more particularly on the youth movement and its development in Germany, and Mr. Roest will talk on the practical idealist movement in Holland.

These two foreign students, who arrived Monday evening, are accompanied by Jorgen Holch of Copenhagen, Denmark, and Jasper King, University of Chicago, '20, representative of the National Student Forum, under whose auspices these students are touring the country.

FRESHMEN ENGINEERS HEAR DEAN FERGUSON

Speaks on Technical Work or Work in Field of Economics for Electrical Engineers.

Strictly technical work or work in the field of economics connected with engineering are two fields of service within the grasp of the man who has a broad technical training in electrical engineering, Dean O. J. Ferguson of the College of Engineering said in speaking to freshmen engineering students last night at 5 o'clock in M. E. 206. Possible improvement and probable future development in electrical work formed a part of his lecture. He outlined the advantages that come with a college education and compared them with the limitations of a trade school course.

"In technical work there is electric lighting, telephone, telegraph, transmission of electrical energy, and electro-chemistry.

"Contrasted with this is the field of economics. Managers of public utilities who handle the financial end—the basis on which money is to be provided for the use of the companies—are generally, for better results, men who understand the technical work of the company.

"The question of whether public utilities should be monopolies has never been fully settled. Right here in Lincoln we have three companies supplying light and power. Is this economic? Is competition what we need? Would we be served more economically in all the railways running into Lincoln were a part of one system?" Dean Ferguson asked. "There are laws forbidding competing railroads to combine. Are these proper laws? What rights must we give to electrical transmission companies?"

The lawyer has his place in such fields, he pointed out, but a lawyer could hardly be expected to go far in solving technical problems. Consequently, he declared, engineers must broaden their province of knowledge. "Cheap power is an economic subject of vital importance," he went on. "If power is cheap there is a great development of manufacture, and we have great systems of transportations to carry raw materials to the places where power is available.

"Shall we transport raw materials to Niagara Falls and do our manufacturing there or shall we transport, figuratively speaking, our power to some other point and do our manufacturing where raw materials are available? The answer to this question is in dollars and cents.

"Public service commissions exist in many states. They may have supervision of all public utilities, or most states, over only a part of them. We know that as rapidly as public utilities develop their interests show some conflict with those of the public and we now agree that the public should have a hand in their management through its representatives, the elected officials."

Great improvement is possible in the technical field of electrical engineering Dean Ferguson asserted. He stated that only three per cent of the energy of the coal is converted (Continued on Page Four.)

"The Forum brought the foreign students to America with the feeling that it and those interested in the type of work it was doing would profit by hearing what young Europe was doing to cope with the very discouraging and hopeless outlook in their countries. The Forum also hoped that these men and the stories they had to tell would be of value to the students and in general to the young people of America. This was just a hope. Whether or not it was justified, the Forum could not tell," says Mr. King in outlining the purpose of the National Student Forum in bringing these young men to this country.

At Vespers at 5 o'clock in Ellen Smith hall, Mr. Tiesler and Mr. Roest will address the girls of the University, telling them of the movements and the feelings of the students in their own home countries.

Jasper King, who is accompanying the foreign students in America, was graduated in 1920 from the University of Chicago where he is a member of Beta Theta Pi. After his graduation, he studied law at Harvard.

Hans Tiesler, the student from Germany, who is perhaps the most aggressive of the three, is individualistic in all his ideas. At one time he and six friends lived together in Jena conducting a co-operative industry as an experiment on how co-operation can exist in the midst of competition. His knowledge is based principally on seeing, thinking, and feeling, for his life has been as hard as it has been varied, especially in the last four years. Hans was but eighteen years old at the time of the revolution in Germany and his sympathies were with the more radical parties. He was under arrest for a time and attended Carl Wilke's school for prisoners and delinquents, where he arrived at the conclusion that his ideas were quite different from those held by the revolutionaries. This student who is the type that represents the hope of Germany will attempt to give Germany a fair showing in the eyes of Americans, he asserts.

Holland is not a country affected directly by the World War and it is perhaps surprising to find a youth renaissance there than in the countries whose every system, social and economic, has been shaken, say Student Forum officials. Piet Roest is the Dutch student. His life, has been one of ins and outs and his struggle for education and existence has evidently played the usual part in development of character. He is now a medical student at the University of Lyden, and, also, a member of the Practical Idealist Association. From personal contact he knows the attitude and conditions of young people of all classes in Holland.

Jorgen Holch, the Danish student, has always been active in international student life. His work at the University of Copenhagen was mainly in the study of theology and the history of civilization. In 1921 he took part in the All-Scandinavian Congress at Stockholm and in the later part of that year went to England to study social conditions. He has worked in connection with the Student Christian Movement in its settlement house where students pass on their instructions to workers who are unable to attend university.
